CORN HARVESTER with Binder Attachment cuts and throws in piles on harvester or winrow. Man and horse cuts and shocks equal with a Corn Binder. Sold in every state. Price $20.00. W. H. BUXTON, of John Town, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25.00 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address,
NEW PROCESS MFG. CO., SALINA, KANSAS.

DIRECTORY FOR FARMERS.

A Directory of Business Interests For Farmers' Use.

About ten thousand business firms in the United States are engaged in occupations that have the direct purpose of manufacturing goods for farmers' use or in some way doing business in farmers' products. Many of these firms are of national character, and it will be an advantage to farmers, stockmen, fruit growers, dairymen, poultry raisers, bee keepers and others to have a directory at hand so that they will be as well informed as men who do business in the cities. We have decided to collect and publish such information of this character as we believe will serve a useful purpose and keep it up to date as a regular publication. It will therefore be published quarterly. The price for the present is fifty cents a copy, and we will be able to deliver the first volume to subscribers in the month of July. The July edition will contain about 5,000 names. The list is arranged alphabetically by name, the address follows and then the occupation, and each state list is arranged in alphabetical order, beginning with Alabama and ending with the state of Wisconsin. Anyone who will send us fifty cents for the July edition can get his money back if he is not satisfied with the book. See page 14.

The Oats Market Situation.

With a sense of satisfaction we take a look at the oats market after the close of business on June 30th, 1913. On May 31st, at St. Louis, cash oats were selling at 37½ to 38½ cents a bushel. On June 30th, a month later, we find cash oats selling at 40 and 41½ cents a bushel, a nice, clean gain of 2½ cents a bushel.

On the Chicago Board of Trade, during the same period, July oats advanced from 39 to 41 cents a bushel. In the same period the September quotation advanced from 38⅝ to 42⅜ cents a bushel. The December quotation also advanced from 39⅛ to 43⅞ cents. Considering the market operators are well informed in regard to the crop of 1913, it looks as though the trade expects a strong market.

Hay Sales at St. Louis.

A few hay sales made late in June were as follows: Sales on St. Louis Side: Part car No. 2 heavy clover-mixed at $12; one car No. 1 light do. at $14.50. Timothy—One car and part car scant No. 2 at $13; two cars No. 2 at $14; one car do. at $14.50; one car scant No. 1 at $15; one car and part car do. at $15.50; two cars No. 1 at $16; one car do. at $16.50; two cars high No. 1 at $17, to arrive. Prairie—One car No. 2 at $11; two cars high No. 1 at $13.50; one car choice at $14. Clover—New, part car (resale) at $11. Alfalfa—New, ten cars scant No. 1 at $15, to arrive; five cars do. at $15.50, do.; one car No. 1 at $16.50; five cars choice at $17. On East Side: One car part No. 1 clover at $14.50 and part scant No. 1 timothy at $15. Timothy—One car No. 2 at $14; one car scant No. 1 at $15; one do. at $15.50; three No. 1 at $16; one high do. at $17. Wheat and oats straw at $7.50 per ton.

A Sixteen-page Paper.

In the month of July we have followed the fashion of reducing the number of pages, which is the summer practice of farm publications. This we have done to enable us to rearrange our mechanical department in order to publish larger editions. We trust our readers will be indulgent with us.

MONEY FOR FARM LOANS.

Postal Savings Banks Deposits Ought to be Used For the Purpose of Making Loans to Famers on the Security of Their Lands and on Other Securities to Co-operative Associations of Farmers.

For several months The National Farmer and Stock Grower has published in its columns a petition addressed to the President and Congress for the purpose of securing to farmers the use of the deposits received by the postal savings banks, the same to be loaned by the government either direct to farmers or through the banks upon approved security at low rates of interest.

The petition is not in this paper, but we have a large number printed and will be glad to send some of them wherever a few signatures can be obtained.

We receive some of these petitions, duly signed, in every mail, but we are not receiving one-tenth the number we ought to receive. In writing for copies of the petition, address Philip H. Hale, Editor, 3550 Vista Ave., St. Louis, Mo.

For Soil Improvement.

On page 6 will be found diagrams in the form of an advertisement showing the value of commercial fertilizer as applied to crops of winter wheat. These diagrams are well supported by bulletins which will be sent to all farmers upon application to the Middle West Soil Improvement Committee, 916 Postal Telegraph Building, Chicago, Ill. The committee does not sell fertilizers but represents the fertilizer interests in careful examination of all experiments that show results. All the literature this committee sends out can be relied upon, and it is a very good thing that someone has been able to create and support such an institution.

Potash Salts.

"The employment of potash salts on potatoes stimulates the growth of the plants, and produces a more even production of good-sized tubers, their uniform size and quality enabling the grower to get better prices.

"Another advantage attributed to the use of potash salts is, that their application has been found to check the attacks of potato disease, and in a dry season the salts have a tendency to conserve moisture in the soil.

"Dr. Dyer, in reporting the results of his experiments in manuring market-garden crops, has remarked that 'potash has throughout increased the crops.' "The well-known need of potash is strikingly brought out in both the early and late varieties on those plots in which no dung has been used."—Farmers' Union Advocate of New Zealand.

Complete Silos and Lumber.

You can buy a silo, and woodwork for a house or barn, and have the car delivered at your nearest railroad. It is claimed that you get a better, stronger and more lasting silo at a saving of 40 to 60 per cent. on the cost of the average timber silo. Do not hesitate to write to Hewitt-Lea-Funck Co., 488 Union Avenue, Seattle, Washington, and enclose the coupon on page 12. There are distributing centers on all railroads, and you will be dealing with the silo builder and lumber producer direct.

At St. Louis, on June 30th, the best grades of butcher hogs sold at $8.80 to $8.87½, averaging 175 to 220 pounds. The bulk of the hogs sold at $8.75 to $8.85.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay
Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000
for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis
The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land
Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

More Wheat Per Acre

We cannot control the price of a bushel of wheat, because too many countries raise wheat. But we can increase the profit from an acre of wheat by reducing the cost of production per bushel. There is not much profit in 13 bushels of wheat per acre, which is the American average. There is good money in yields of 25 to 35 bushels. These can be obtained, if one prepares the land right, uses good seed and **good fertilization.**

POTASH

Good fertilization means enough fertilizer of the right kind. With a good rotation 400 to 600 pounds per acre is enough, provided a reasonably high-grade formula such as 2-8-6 or 0-10-6 is used. The low-grade 1-7-1, 2-8-2 and 0-10-2 formulas are out of date and out of balance, and the plant food in them costs too much per unit. Urge your dealer to carry high-grade formulas or if he is stocked up with low-grade stuff get him to buy some potash salts with which to bring up the *potash content* to a *high grade.* One bag of muriate of potash added to a ton of fertilizer will do it.

If you prefer real bone or basic slag in place of acid phosphate try 300 to 400 pounds per acre of a mixture of 1600 pounds of either with 400 pounds of muriate of potash. You will find that **Potash Pays.**

These high-potash mixtures produce better wheat and clover, heavy grain and stiff straw.

We sell Potash salts in any quantity from 200 pounds up. If your dealer will not get potash for you, write us for prices and for our FREE booklet on Fall Fertilizers.

GOOD STACKING SAVES MONEY.

Stacking Wheat in Preference to Leaving It in Shocks.

I have had a good many years of experience in growing wheat, and for the past several years I have made it a practice to stack all the grain, because I have lost considerable by leaving it in shocks, expecting the thresher to arrive soon, which was seldom the case, and in the meantime the grain became badly damaged by the weather. I have noticed also that sparrows destroy much of the grain when it is left in the shock. By stacking I am able to go right ahead fall plowing the stubble in case I desire to do so, which can not be done when the wheat is in the shock. Then, again, grain in stacks undergoes a "sweating" process, which gives it a very fine color, and in case of grain damaged by the weather it will easily raise the wheat one grade.

I believe every man who grows wheat should be able to make a good stand, whether he is accustomed to thresh out of the stack or not. While care and practice are necessary to make good stacks, any man who will take pains can soon build a stack that will turn water. I will give my experience in stacking, which may be of benefit.

I select as a site for the stack a piece of land high and dry, but not on a hillside, as in case of heavy rains the water will run under the stack, and, being unable to dry out, will cause much damage. While two stacks allow of a shorter haul with the sheaves, four stacks save time at threshing. Where four are built, it is well to set the pairs an equal distance apart to allow of setting the thresher four ways. The stacks should be six or seven feet apart; if too close, some of the sheaves must be pulled out to admit the separator, and if too far apart, it is hard on the pitchers and more grain is wasted. I take care to see that it is possible for the separator to set level, as otherwise much grain might be lost. I also have a clear place for the engine to stand, as much difficulty is often caused and damage done to the engine if the land is rough and uneven or soft.

A round stack of six to seven loads makes a fair-sized one. A somewhat larger stack than this would be desirable, but few men care to pitch to anything larger. I start the stack by building a round "stook" in the center. It is important to have this "stook" firmly placed and even. Around this I build another row of sheaves with a little less slope, then as many rows as required to give the desired size, each row having a little less slope than the preceding one. When this is done, I start at the outside, laying a row a trifle farther out than the one on the ground. I lay another row inside with the butts touching the heads of this row to fill up the center. Now lay a row on these with the butts overlaying the heads of the outside row sufficient to hold it. I again fill the center and lay another row of butts to the bands and continue in this way to the center of the stack. I now have the center much higher than the outside and consequently some slope to the sheaves. Each outside row should be built a little farther out than the one beneath. If you get too much slope and the sheaves threaten to slip, draw the butts in toward the heads of the row beneath. This will reduce the slope. If the stack is becoming low in the center, place the butts farther out; this will soon raise it. The sheaves must be drawn well together and the rows kept even. Keep the center high and do not tread on the outside row, but leave it loose and it will settle. I pack the center well so it will not settle so much as the outside. I do not top the stack off too abruptly nor yet carry the top too high. As I near the top I increase the slope of the sheaves. Care must be taken to finish the top in the center of the stack directly above the center of the foundation. If the stack is allowed to become lop-sided it will lean to that side, and the longer it stands the worse it will become. In time, if the top does not slide off, the sheaves on the side from which it leans will be forced down at the head and sprung up at the butts until they take in water like a funnel. By keeping the center high and firm, widening as the stack is built up to the drawing-in point and finishing over the center, the stack will settle from the center toward the outside, giving a better slope the longer it stands. When the last sheaf is in place on top, I take a stick about one inch thick and four feet long and run it down through the sheaf into the stack to keep the top on. The less loose stuff that goes into the stack the better.—Wm. Hardy, Rural Route 2, Tunnel Hill, Illinois.

First Argentine Beef.

At New York, on June 8th, a small shipment of Argentine frozen beef arrived. It was only a small lot and consisted of twenty-five head, and is worthy of note for the reason that it was the first shipment of South American beef ever received in this country.

William W. Brauer, the beef importer, said there is little likelihood of further importation of Argentine meat through London. The reason the present shipment was delivered at New York, he said, was the result of a speculation on the part of London dealers, who took advantage of the rock-bottom prices of the foreign meat there caused by the Beef Trust and other dealers in South American meat trying to undersell one another.

The meat was sold in New York at 12 cents a pound, 1½ cents less than the wholesale price paid for American dressed beef. The Argentine beef was subject to the existing duty of 1½ cents a pound on imports of beef.

New Zealand Meat at Seattle.

From Seattle, Washington, on June 4th, it was reported that three carloads of New Zealand frozen beef, mutton, veal and rabbits and butter arrived there that day from Vancouver, and were placed on sale, the beef being retailed at 11 cents, as against 14½ cents for American fresh beef. The meat was shipped from Auckland on the big liner "Niaga," which has refrigerating rooms. Arrangements have been made to send regular weekly consignments to Seattle, whose market is expected to take all the surplus from Vancouver.

WEALTH IN THE SILO.

Nothing More Valuable Than Silage on Any Farm.

The agitation for silo building has been carried on for over a generation, by the actual observation of the writer. How much longer the agitation has gone on he does not know. Silo building has been rapid in spots. Here and there are localities where they will be found on every farm, while in many localities the farmers have never taken kindly to the idea.

Yet there is probably nothing that time and experience have more thoroughly demonstrated as good than the silo. It is unusual to find a first-class dairy establishment that has not one or more silos. So far as the writer knows, every producer of high-priced certified milk depends on feeding silage to produce it. Some of the best milk ever put on the market was made by H. B. Gurler, formerly of DeKalb, Ill., and he had four silos. Some of that milk was sent to the Paris Exposition in 1900 and was opened in Paris seventeen days after being bottled in DeKalb. It had nothing but ice around it, no internal doctoring, and it was sweet when opened, while milk made in Paris under normal conditions was sour before night of the day on which it was drawn. Which shows that the acid in the silage does not hasten the souring of milk; indeed, if any of that acid gets through into the milk (which it probably does not), it rather retards than helps the souring, for the souring of milk is not caused by the acid found in the silage, but by lactic acid.

Some years ago the leading milk canneries were refusing to buy milk made from silage, under the mistaken notion that the acid in the food might affect the milk; but the writer understands that now practically all of the canneries and condensaries buy milk from cows fed silage, provided that the conditions in the barns are right; that is, that no rotten silage is left around the barn to taint the air and so taint the milk.

In the great corn belt of America silage should be put up on every farm where cows are kept. It is a food of such great value that, in this day of high-priced cattle feeds, no farmer can afford not to lay in large supply of this kind of food.

Silage is a feed most valuable for cattle, but also of value to most other farm stock. Horses eat it greedily when accustomed to it, as do sheep and hogs. It furnishes a carbohydrate element that is now costly in most other feeds. Several of our Experiment Stations have made experiments in feeding silage to other animals than cows, and there is much interesting data extant. Any man that wants to study up on the subject should write to the United States Department of Agriculture for the list of the bulletins published by the different states on the topic and then send to the various stations for them. The Pennsylvania Station has just completed some extensive tests in feeding silage to horses and reports it as both economical and valuable.

But the production of milk will always remain the chief motive of its feeding, and it is just as valuable for the farmer with three or four cows as for the dairyman with a hundred cows, in proportion.

It is a pity that all owners of herds of dairy cows will not accept the testimony of so many witnesses in favor of the silo and silage. It is a source of wealth that should not be neglected.

It is not too late now to build a silo for use this fall. Common field corn can be used for filling where regular silage corn has not been planted. In fact, some heavy feeders of silage grow common dent corn for this purpose anyway, believing that a ton of silage made from common dent corn is more nutritious that a ton of silage made from regular silage corn, which contains a large amount of water. But whether one kind of corn be used or the other, the silo should be built.

A DAIRY EXPERIENCE

In Favor of Farm Buttermaking.

Whether the farm dairy shall be used for the purpose of supplying milk and cream to cities is a question that must be dtermined by individual circumstances. But there is much to be said in favor of making butter, and it is doubtless true that some of our farmers that are now selling whole milk for city consumption would do better if they were to satisfy themselves with the old-fashioned means of disposal of their product—in the form of butter.

A man that was for long years a seller of whole milk was telling the writer of his experience in changing from the selling of whole milk to the making of butter. He became dissatisfied with the treatment he was receiving from the buyers of milk, principally because they had got it into their heads that silage was a bad thing out of which to make milk. They declared that if he wished to sell milk to them he would have to leave out the silage and feed his cows on hay, grass and mill feeds. So, instead of cutting out the silage, he cut out the milk buyers.

He turned to the making of butter, and after being at it a few months declared that it was good enough for him. He found that he was getting just as much money out of his milk as he did before, and was saved a lot of trouble. The first item of saving was the long drive to the station twice a day in hot weather and once a day in cold weather. The item of time saved for him or his man was a very large one. Then there was a saving which he could not reckon exactly in the work of his horses, because of course that extra work of going to the station took energy, and that energy had to be made up in feed. Moreover, it took the time of the men and horses, and this saved time went into farm work. He found that saving this time made it possible for him to do more farm work at the right time.

He found that he could increase the number of hogs he was keeping, because he had skim milk to feed the growing pigs. It helped also in the raising of the calves. Some of the heifer calves that would have gone to the butcher were now raised and became later good cows.

But the relief from having to be on time at trains in all kinds of weather was great. Now, if it rained or snowed, the horses could remain in the barn. The churning could go on in any weather.

This man soon secured customers anxious to get his butter at the same prices they were paying for it in the stores, and sometimes they came to him for it. He found there was a great difference between selling milk at wholesale prices and butter at retail prices. If he had been more of an expert he would have produced a higher grade of butter that would have brought a few cents above the retail market price; but even ordinary butter was profitable.

If a man has good cows it will often pay him to make butter, but if the amount of butter-fat produced by his cows is small, of course it would be a losing game for him to go into the buttermaking business. And just here is where so many farmers fail in trying to dispose of their milk in that way. Poor milk sold to the milk buyers will often bring as much as a better grade of milk, but not so when it is disposed of through the buttermaking process.

If farmers will grade up their cows and weed out till they have cows that will produce large quantities of butter-fat, they can become independent of the milk buyers and dispose of their product in an easier way.

You need a new DE LAVAL Separator NOW

1st If you are still using some gravity or setting process of creaming—

Because your waste is greatest and quality of product poorest in mid-summer, when the milk supply is greatest.

Because time is of greatest value on the farm at this season and the time and labor saving of the good separator counts for most.

Because the skim-milk is poorest without a separator in hot weather and often more harmful than helpful to calves and young stock.

Because the work of an improved De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

2nd If you have a very old De Laval or an inferior separator of any kind—

Because the losses of the poor separator from incomplete skimming and the tainted product of the difficult to clean and unsanitary separator mean most when the bulk of milk is greatest.

Because of the great economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

Because an improved De Laval separator is so much simpler and more easily handled and cared for than any other, and you cannot afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.

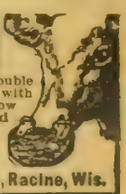
Because the De Laval separator of today is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority count for most during the hot mid-summer months.

These are all facts capable of prompt and easy demonstration, whether you have a poor separator or none at all. The new De Laval catalog, to be had for the asking, helps to make them plain. Every De Laval local agent stands eager to do so with a machine itself, with no obligation on your part to buy unless he does—and that to your own satisfaction.

WHY DELAY? Why put off so important a step as the use of the best cream separator, which you need more RIGHT NOW than at any other time?

The De Laval Separator Co.
NEW YORK CHICAGO SAN FRANCISCO

HUMANE CALF WEANER



Absolutely prevents sucking—no trouble to wean calves—can eat and drink with perfect freedom. Can't hurt either cow or calf. Every farm needs several. Send your order now. Small size 25c, large size 35c, postpaid. Agents wanted. *Write for circular.*

LUXURIANT PASTURAGE.

A Summer Necessity For Fowls—One Prime Factor in Making Money From Poultry — Nearly All Yards Should be Enlarged.

More than anyone else, the American farmer is in a position to make money out of poultry. This is because primarily he is so liberally supplied with land that he can make any provision he sees fit for the pasturing of his fowls. But the American farmer in the main has been negligent of this important fact.

Where poultry is scientifically managed we find the pasturage being made as much of as it is for other farm stock. Areas are habitually seeded down to various crops for the single purpose of giving the fowls a luxuriant pasturage, thus saving grain feed and protecting the health of the birds.

Wire netting is cheap, and most of our farm poultry yards should be enormously enlarged. When four-foot wire netting is bought by the roll it can be secured at a very low price. If bought in less than roll lengths it is quite expensive, because the dealer has the rest left on his hands and cannot tell when he will find a market for it. A roll or two will be a wise investment.

The easiest pasturage to get is green grass, and often when the fowls are confined in a very limited space there is a great deal of greensward adjoining that is not in use. Include so much of this in the poultry yard that the grass cannot be eaten down. If the ground is picked bare of grass it proves that the poultry yard is not large enough.

If inconvenient to enlarge the poultry yard, the next best thing to do is to divide it into two parts by running a fence through the middle. Then plant one side with rape seed, which will cost but 15 cents a pound, and one pound should last through the entire season. It produces a luxuriant pasture, but the fowls should not be turned in till it is at least a foot high, and the larger the better. If it is very large the fowls will eat away the soft parts of the plants, leaving the stems and midribs of the leaves. When this occurs, take the poultry out of that side and the soft parts of the plants will grow again. In the meantime, rape should have been growing in the other part of the yard.

But many of our poultry yards are under trees or in shade so great that rape does not grow well. In that case, sow oats, which will sprout well and produce a half foot of foliage under almost any condition. They will even sprout in a gloomy cellar. The seed of the oat is so large that, given moisture, it can develop a good-sized plant out of the material stored up in itself. It is used for pasturage for fowls at some of our leading Experiment Stations.

The movable poultry fence is being used here and there to give pasturage in fields and in cultivated grounds where it is not thought desirable to give the fowls free range. This necessitates the construction of small movable poultry houses, but the the result pays the effort. As soon as the clover field has been mown and the hay taken out, the adjustable fence can inclose a part of it, and there is no better pasturage, unless it be an alfalfa field. The latter must not be too closely pastured, as it will not stand as severe treatment as will the clover field.

By not taking advantage of the opportunities to give the fowls abundant pasturage we are losing much. And in the meantime we are permitting to go to waste much material that can be easily changed into eggs and flesh.

"Off Years" in the Apple Orchard.

I have always believed there was some good cause for the "off years" in the bearing apple trees and set about ascertaining the reason for a superabundance of fruit in one season and comparatively none the year folllowing.

Experiments convinced me that the abundance of fruit produced in one season so exhausted the vitality of the tree that it was unable to produce the following year, unless fertilized in proportion to the loss of vitality which it sustained, but that, if this was done, the problem of "off years" would be practically solved.

I venture to say there are thousands of orchards which never receive any attention in regard to cultivation or fertilization after they come into bearing, but are left to extract such nutrition as the feeding roots can gather from soil too often not up to the average in fertility. There is then talk of "poor quality," while the quantity is variable, and the crop altogether so unsatisfactory that in many instances the trees have been removed to make way for other crops which the grower would not think of neglecting in the matter of cultivation or fertilizing. And yet a first-class apple crop pays the producer far better, generally, than one of grain.

There is an enormous drain upon the natural fertility of soil by the heavy growth of wood, the millions of leaves and the crop of fruit with seeds. After the trees have arrived at bearing age the most important element of fertility is potash. Mature orchards should receive an annual application of 100 to 200 pounds per acre of muriate of potash. This I have found in conducting experiments upon my own trees greatly influences the character of the pulp, changing it from a tough, leathery substance to one of juicy crispness. This quality of firmness is most desirable and allows of shipment to long distances, where the fruit comes from the packages in a fresh, salable condition.

If nitrogen, which is next in importance, is needed in the apple orchard, it can best be supplied in stable manure. If, however, the trees are making a good growth, it will do more harm than good, because a new rank growth is started which may not fully ripen before severe winter weather. About 200 pounds of ground bone per acre added to the muriate of potash will supply phosphoric acid, if this is believed to be lacking in the soil. This matter of fertilizing should be attended to now during the period of growth when the feeding roots are reaching out after plant foods. Potash is a great factor in ripening new growth of wood and preparing it to withstand the cold of winter. Scatter well under the trees and work lightly into the soil; being soluble, it will easily reach the roots. I believe from experience that the feeding of fruit trees—unless affected with scale—is of more consequence than spraying, but, taking both in conjunction, there is great profit.

The prices which are obtained every winter and spring for prime American apples in the large markets should encourage the best efforts in production.—E. A. Season.

Is an excellent remedy for worms. We offer it on an absolute guaranty that it will give satisfaction to all who use it, or your money back. $1.00 bottle holds three 50-cent bottles. Free horse booklet on request Sold by druggists or prepaid from BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

Unthrifty Oats.

In my travels in Central and Southern Illinois I find occasionally a good field of oats, but most fields make a very poor showing. While climatic conditions may interfere seriously with the crop, still I find other factors which have more or less influence.

Poorly-adapted varieties and poor seed-bed condition put a heavy handicap upon any crop. I believe it is a mistake to sow late varieties of oats in Southern Illinois. While these white-berry varieties are better sellers, still they must have rather favorable conditions right up to harvest time. Varieties which will mature around July 1 will be much more dependable for this region.

Better seed is needed. Whether oats are grown for market or for home feeding, it will pay to use only clean, well-graded seed. Fanning mills are far too scarce in this region. From ten to fifteen per cent. might be added to the value of the oat crop if vigorous grading of seed was done year after year.

In the northern part of Illinois farmers sow oats on their thinnest ground; but in the southern part of the state it will pay to sow oats on tolerably strong ground.—L.C.Brown.

Building Up Thin Ground.

A Butler county, Missouri, correspondent submits the following questions: "My land is very thin, as is shown by the crop yields. Wheat makes only about half a crop and corn not over thirty bushels per acre. I am not able to buy fertilizers, so would like to know what crop could be sown for manure?"

The proposition here is to plow under organic matter. This will help to a large extent. The ground probably needs phosphoric acid. I should go ahead with green crops. As soon as the wheat crop is removed I should sow cowpeas and plow them under late this fall or early next spring. If one cannot buy cowpeas, I should sow winter rye this fall and plow it under next spring. Either of these crops will help the corn crop next season. Cowpeas sown among the corn this season will help. The thing to do is to grow legumes, if possible, and plow them under until a short rotation can be established, and apply as much manure as possible.—L. C. Brown.

The Concrete Silo.

Silos are now being built in almost every farming community in Missouri. The first and most important question a farmer asks when he decides to build a silo is, "What kind shall I build?" Inquiries come by every mail to the Dairy Department of the University at Columbia about this or that kind of silo. Many farmers have been told that concrete silos are not successful and for that reason they hesitate to build them.

A silo to be successful must be air tight and strong enough to withstand the outward pressure of the silage. A silo that meets the above requirements will be successful regardless of the material with which it is constructed. A concrete silo when properly built will keep silage as good as any other kind and will last practically forever.

Concrete silos are not as expensive in many localities in Missouri as the silos commonly sold. Where the building is at hand in creek beds or in gravel pits they are being built at a very low cost. The average cost per ton capacity of thirteen concrete silos built in South Missouri, where the gravel was taken from the creek beds, was $1.60. This means that if each silo had a capacity of 100 tons the average cost would have been $160. In one county in North Missouri, where sand from a creek bed was mixed with rock broken by hand on the farm, a 100-ton silo was built complete for $250. In Macon county the sand and crushed rock for a concrete silo were shipped from Hannibal, and after hauling the material four miles in the country, a 100-ton silo was built at a total cost of $350. The above facts are taken from actual figures furnished by the farmers building the silos. They show that the concrete silo is probably on the average no more expensive than any other kind, and it is a well-known fact that they give satisfaction and are permanent.

The Dairy Department of the Missouri College of Agriculture, Columbia, Mo., furnishes free plans for the forms to be used in building concrete silos and also sends a man to start the erection of a concrete silo after the forms are built and the material is on the ground. When this is done the man building the silo is required to pay the traveling expenses of the expert. Many farmers who want to build concrete silos are asking for the plans of the forms and the services of this expert.—P. M. Brandt.

On June 30th, at the St. Louis market, the best lambs were from Tennessee and sold at $7.40 per 100 pounds, which was the top of the market.

No-Rim-Cut Tires
10% OVER-CAPACITY

Controlled by Secrecy

The essential feature in No-Rim-Cut tires is made under lock and key.

We control it by secrecy.

Other attempts to make tires which can't rim-cut have cost fortunes in faulty tires.

No-Rim-Cut tires, for years and years, have served hundreds of thousands well. Not one has ever rim-cut.

That is why the demand centers on them. Goodyear tires have come to outsell every other tire.

The Secret

The secret lies in six flat bands of 126 braided wires. They are vulcanized into the tire base.

That makes the tire base unstretchable. The tire can't be forced off without removing a rim flange. So we don't hook the tire to the rim.

With this hookless tire you turn your rim flanges outward—not inward as with clincher tires. Then the tire, when wholly or partly deflated, rests on a rounded edge. Rim-cutting is made impossible.

Extra Capacity

No-Rim-Cut tires have 10 per cent more air capacity than the same rated size in clinchers. And air is what carries the load.

This over-capacity, on the average, adds 25 per cent to the tire mileage.

So the tires save rim-cutting and save over-loading. They save so much that they have become the most popular tires in the world.

The Vital Bands of Wire

But our braided wire bands are considered essential to a faultless tire of this type.

Again and again other ways have been tried. And thousands of tires came back for replacement because the ways were wrong.

So the demand has come to Goodyears, in an overwhelming way. We have sold over one million automobile tires in the past 12 months alone.

No Extra Price

Now, our mammoth production has brought down the cost of this wanted type of tire.

No-rim-cut tires used to cost one-fifth more than clinchers. Little by little the cost has been cut.

Now no standard tires of any type cost less than No-Rim-Cut tires.

Think what that means—tires that can't rim-cut, over-capacity tires at no higher cost than old-types.

Don't you think that it pays to insist on them?

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St. Louis. The announcement is made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale rings were originally well-bred Range Horses. The July Auctions will be held on

Thursday, July 10th,
Thursday, July 24th,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is good, especially for well-bred Mares and Geldings in fine condition.

Cowpeas.

The acreage devoted to cowpeas is increasing from year to year as the value of this crop is better known. Not only is it valuable for feeding to all animals, but it is a great soil builder, like all legumes, and it is more modest in its demands than any of them except sweet clover. It will grow on soil where it is impossible to get a stand of clover or alfalfa and will put the land in much better condition to make a crop of anything that may be planted after.

There is no other leguminous crop that will mature in a hundred days or less from planting time, and none other that will fill in when an emergency comes, such as often must be met when the weather has been unfavorable for the main cash crops. The writer has planted cowpeas after both oats and wheat have been harvested and removed from the fields, and those planted after wheat were in the best of condition for hay, the earliest-set pods being ripe, and these were picked for seed for the following year.

The present season with the partial drouth that has prevailed in some sections will drive many farmers to plant cowpeas instead of corn, and if the peas can be threshed, they will command such a price as will make a good profit for the grower; in fact, on any but fertile land they will far surpass corn in money value if seed and hay are sold; but if possible they should be fed to stock and the manure saved so as to enrich the land, so that all staple crops can be profitably grown.

Clover and alfalfa, the twin harbingers of prosperity for the farmer, will make a stand after cowpeas when they will refuse to grow on adjoining fields. The reason is that the cowpeas have improved the mechanical condition of the soil, loosening it up so that the tiny rootlets of the young plant could feed far and near. The cowpeas have also added a large amount of nitrogen to the soil, and this nitrogen is what is needed by all young plants to make thrifty growth, so that any crop planted after cowpeas will look and do better than that planted on other land of like nature that has not had cowpeas grown on it the previous season.

It follows that cowpeas should be made a part of every regular rotation and also be planted whenever emergency cases make it advisable to grow something else than the chosen cash crop. In seasons of drouth, when corn will not be profitable, cowpeas will make good feed, whether wanted for pasture or for hay, and if the seed pods have not been all picked before cutting the hay, will make a good ration for stock without any grain feed.

Early planted cowpeas will make the most vine, especially if the season is wet, and the late cowpeas will produce the most seed. On poor soil there will be less leaf and stem than where the soil is richer, but no soil will long remain poor if persistently planted to this crop. It may be necessary to add a little commercial fertilizer to land that is nearly exhausted of plant food in order to give the crop a good start and make it strong to gather nitrogen from the air, but this is an expense that brings profit in the end.

Nitrate of soda will greatly increase the growth of vine, and thirty pounds or more to the acre may be used if accompanied with 250 pounds acid phosphate and seventy pounds sulphate of potash. These fertilizers should be broadcasted at planting time, and if the ground is well harrowed afterwards, the soil will take them up and pass them on to sustain the crop.

Late-planted peas should always be drilled, so as to admit of cultivation, for the heat of summer will dry out the soil unless the surface can be stirred and a dust mulch formed. The cultivation is needed to hasten the growth of the plants, so the crop may mature before frost, or before the ground may be needed for wheat, rye or winter oats. If commercial plant foods be applied as mentioned, faster and greater growth will result, and this will make for fertility that will increase the subsequent grain crop. At the Missouri Experiment Station wheat and cowpeas have followed each other in regular rotation for a number of years, the crop of grain being larger each year.

The practice of the Station has been to plant cowpeas as soon as wheat is harvested and remove the cowpeas in time to sow wheat again, so the ground is occupied all the year with a growing crop. How much better this is than to let the fields grow up with useless weeds after harvest, which unfortunately is the way that many farmers still do, in spite of the object lessons furnished by those who are more progressive and consequently more prosperous.—D. C. Cornman.

Utilize Waste Land.

While the prospect is good for a normal hay crop, still it will be profitable to utilize all the unoccupied land with some sort of a forage or soiling crop. These catch crops are better for home feeding than timothy hay, and, being soil improvers as well as forage producers, they assist in building up soils. Early in July will not be too late to sow cane and cowpeas together, and this combination makes a mighty good feed. Sow about one bushel of peas with thirty to forty pounds of cane. It will produce from ten to twelve tons of green feed per acre, and come in at a time when other green stuff is becoming scarce. The peas and cane together make a very palatable and almost balanced ration, and stock will eat it with great relish. If feed crops are not needed, it will pay to sow the waste places to peas or soy beans merely for the sake of green manure. Every acre of these out-of-the-way, usually waste areas should be put to work.—L. C. Brown.

A Large Beef Steer.

The largest steer ever handled by the Independent Packing Company, Thirty-ninth street and Chouteau avenue, St. Louis, Mo., was slaughtered there for John Caffarata, proprietor of a saloon and restaurant at Delmar and Hamilton avenues.

The animal weighed 2,900 pounds on foot and dressed out a little more than 2,000 pounds of beef.

The steer was raised by Caffarata on his farm in St. Louis county. It was three years old. At the market price Friday it would have brought $269 on the hoof.

A special hoisting apparatus had to be erected at the plant before the carcass could be handled. The average of cattle handled there is 1,100 pounds, and the heaviest ever before handled weighed 1,800 pounds on foot.

Death to Heaves

"Guaranteed or Money Back." Coughs, Distemper, Indigestion. 50c., $1.00 per can. NEWTON'S Large for Heaves. At druggists' or sent postpaid.

THE NEWTON REMEDY CO., TOLEDO, OHIO

BLACK LEG

LOSSES SURELY PREVENTED by Cutter's Blackleg Pills. Low-priced, always fresh and reliable, they are used by over 80 per cent of California and Western stockmen, because they protect where other vaccines fail. Write for booklet and testimonials.

10-dose pkge Blackleg Pills.....$1.00
50-dose pkge. Blackleg Pills..... 4.00
Cutter's Blackleg Pill Injector.. 1.50

Pills may be used in any injector, but Cutter's is simplest, strongest and easiest to use.

Every package dated, unused pills returnable for free exchange for fresh after date on package. Do not use old vaccine, or of uncertain age (ours or any other) as it affords less protection than fresh.

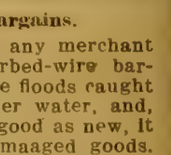
Discounts: 250 doses, 10 p.ct.; 500 doses, 20 p.ct.

Insist on Cutter's. If druggist doesn't stock, order from Laboratory, giving address plainly. We prepay charges and ship promptly. Send personal check or M. O.

THE CUTTER LABORATORY, BERKELEY, CAL. OR CHICAGO, ILL.

ABSORBINE, "The Antiseptic Liniment," promptly reduces bog spavin, thoroughpin, wind puff, bowed tendons, capped hock, shoe boil, curb, splint, big knee, fistula, etc. It is a mild and pleasant remedy to use—does not stain or leave a greasy residue. It is soothing, cooling, healing and powerfully penetrating—a true discutient and resolvent liniment, strengthening and invigorating to tired, lame muscles or tendons. Absorbine at regular dealers, price $2.00 a bottle, or sent express prepaid with full instructions. Write for free book giving detailed instructions. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.—(Advt.)

ELECTRIC Steel Wheels Save YOUR Back



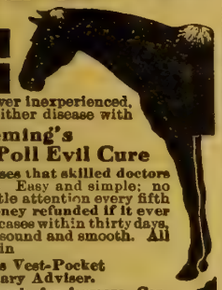
Save draft—save repairs. Don't rut roads or fields. Send today for free illustrated catalog of wheels and wagons.

Electric Wheel Co., 40 Elm St., Quincy, Ill.

Barbed-wire Bargains.

It is not often that any merchant gets a chance at barbed-wire bargains, but this year the floods caught a few train-loads under water, and, although it is just as good as new, it has to be sold as damaged goods. The advertisement of this wire is on page 5. A. J. Child & Sons, 517 North Main street, St. Louis Mo., have 400,000 pounds to sell and will dispose of it at rock-bottom figures.

Fistula and Poll Evil



Any person, however inexperienced, can readily cure either disease with

Fleming's Fistula and Poll Evil Cure

—even bad old cases that skilled doctors have abandoned. Easy and simple; no cutting; just a little attention every fifth day—and your money refunded if it ever fails. Cures most cases within thirty days, leaving the horse sound and smooth. All particulars given in

A Pair of Western Range Horses.

Speaking of the Western range horse sales conducted by Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards, Mr. A. M. Shultz, of Shipman, Ill., said as follows: "When I sold my farm not long ago I held an auction sale of live stock, personal property, etc., and at the sale I sold a heavy team of draft mares that weighed 1,600 pounds each for $452.50. I bought them at the Stock Yards in a car-load that cost me $118 per head. I did two-years' good work with them that was worth the original cost and the feed they received."

Ends The Misery Of Wearing Worthless Trusses

How 60 Days Trial Is The Only Safe Way To Buy Anything For Rupture

Here is something absolutely GUARANTEED to keep rupture from coming out—something that does away with the misery-causing leg-straps and body-springs.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23d St., New York City

Western Range Horses.

During the month of June two sales of Western range horses were held at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company. At the first sale, on the 12th, the horses sold from $33 per head for some inferior 750-pound mares to $120 for a single halter-broke draft horse. In the sale forty head sold singly and in pairs at $67.75 per head. The bunches and car-loads ranged from $33 to $112.50. The sale on June 26th had better horses, and forty-five halter-broke horses sold singly and in pairs at an average of $80.29; eighty-one head unbroken, 1,200 to 1,400 pounds, averaged $80.30. The sales included 700-pound plain mares at $29, to twenty-three head draft mares, 1,250 to 1,400 pounds, at $115; twenty-three head three to five-year-old geldings, 1,200 to 1,400 pounds, at $110. This sale also included fourteen mules, sold in pairs at an average price of $152.36 per head. Anyone sufficiently interested to become buyer or seller at these sales can obtain a complete list of all lots sold by addressing J. J. Searcy, Sale Manager, care Campbell & Reid, National Stock Yards, Ill.

Crops of the East Indies.

From London, England, on June 28th, a government report on the progress of agriculture in India said that in Bombay about 20,000 acres have been sown with improved cotton with the seed of which it is expected ultimately to plant some 2,000,000 acres. In the Madras Presidency the increase of the aea under cotton during the past two years amounted to 600,000 acres, and the present area exceeds that of any previous year. In the Punjab preparations are being made for the spread of improved varieties, and the new canal colonies about to be opened offer facilities for the production of high-grade cotton on a large scale.

The improvement of the wheat crop both in respect of quality and yielding power continues to engage the attention of the government. A collection has been made of the important sugar canes of India and a large number of new seedlings have been raised which will be experimented upon in the development of the sugar-cane industry.

Feeding Kaffir Corn.

A Southern Illinois correspondent asks if Kaffir corn is as valuable as common corn for feeding all kinds of live stock.

I do not advise Illinois stockmen to feed Kaffir corn exclusively. It lacks protein, and for this reason it should be fed with such feeds as alfalfa, clover, cowpeas, soy beans, bran or oilmeal. With the exception of poultry, I would not use Kaffir corn exclusively for feeding any kind of stock. When fed to horses or cattle with timothy or straw it is very constipating and bad effects usually result. However, Kaffir corn is grown in many regions where common corn is more or less of a failure, and if it is fed with the proper balance of such foods as clover, alfalfa, soy beans or oilmeal, it makes a fairly good ration. But my experience in feeding it alone to horses, cattle and hogs has not been satisfactory. For poultry the white Kaffir corn seems best.—L. C. Brown.

The Wheat Market Situation.

There is a dark cloud over the wheat-market situation and it consists of the government at Washington that is earning easy money legislating aganst the farming interests of the country.

Between May 31st and June 30th the cash wheat market at St. Louis has changed from an old wheat basis to a new-crop basis, and, there being a greater shrinkage on the new wheat than on the old, prices have naturally declined in consequence. No. 2 red declined from $1.03 and $1.06½ on May 31st to 89 to 91 cents a bushel on June 30th. The hard wheat changed from 93 to 94 cents a bushel to 89½ and 93 cents a bushel.

The changes in the wheat market at Chicago were in the same general direction—downward. July wheat declined from 92¼ to 89⅛ cents. The September quotation declined from 94⅛ to 93⅛ cents, and there we will leave the wheat market, low enough without the admission of foreign wheats which Congress is apparently so anxious to bring about.

Potash Easily Purchased.

We invite attention to the interesting advertisement of potash salts on page 3. In this connection we desire to say that a few years ago it was with the utmost difficulty that potash salts could be obtained unless mixed with other fertilizing material. But the officials of the German Kali Works decided that it was bad policy to withhold the potash from the farmer and sell it to the fertilizer plants for the reason that very few of the mixed fertilizers contain sufficient potash. Potash is therefore easily purchased by writing direct to the nearest office in the advertisement.

St. Louis Horse Market.

In the circular that Mr. T. H. Holland sent out after the last Monday and Tuesday horse auction in June at the National Stock Yards, after saying that good chunks and draft horses were selling well, he said in regard to cavalry horses:

"We want to buy some riding horses, 15-1 to 15-3. We can use a 15-hand horse if he has a good head and neck and good conformation, and we can also use a 16-hand horse that isn't out of proportion. We would like 100 head of this kind at once. Can use any color, excepting grays, duns or spotted ones. Want them from five to seven years old. We can use a four-year-old that is fully developed, clever and well broke. Now we don't want any of those slim weeds. Will pay all they are worth and a little premium more than they would bring for any other purpose."

Messrs. Holland, Nugent & Maxwell Bros. have delivered to the government recently about 250 horses for cavalry service, and have a contract for at least a hundred more. The way they get them is out of the horses consigned to the general market. No other market compares with St. Louis in the extent and variety of the horse offerings and in numbers also. To put up a thousand cavalry horses a month would in no wise embarrass the St. Louis market, if, without any sensational notoriety, it was known that the government would receive that number.

The Corn Market Situation.

It appears from the general trend of corn quotations that the demand will be equal to the supply, even so far as next December.

In St. Louis, on May 31st, cash corn was selling at 58¾ cents a bushel, and on June 30th the cash corn sold at 62½ and 63 cents a bushel.

In the same period, from May 31st to June 30th, the July quotation advanced from 57½ to 60¾ cents. The September quotation advanced from 58¼ to 62⅜ cents, and the December option advanced from 56⅝ to 59½ cents.

That is pretty nearly all that is known concerning the corn market and its future on June 30th, just as the market has closed.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

They Keep It Up

There are some cattle that give more milk when they are fresh than a Jersey, but there isn't any breed that gives as rich milk as

The Jersey

at as small feeding cost, nor is there any breed of cattle that will *keep it up* like Jerseys will, *year in and year out.* That's why you ought to buy Jerseys to increase your herd's efficiency. Send for Jersey facts.

AMERICAN JERSEY CATTLE CLUB 324 W. 23d St., New York

Sell the Hens.

One hundred days from June 1 your hens will have completed their season's work. If the hens would stop laying gradually and evenly, one by one, you would have one hen less laying each day; in a week you would be boarding seven loafers, in two weeks fourteen, etc. In a few weeks the eggs from the flock will not pay the feed bill, and for the remainder of the season the flock will be a dead loss.

Prices now are higher than they will be 100 days from now, when plenty of young stuff will come on the market, does it not seem the part of wisdom to sell the hens as they get through business? It is not likely that hens older than one year will come back to the lay, but do you know the old ones? Or do you know the young ones that are worth keeping through several months of idleness?

Another advantage of culling now is the added house room the young stock will have, and house room on the farm is always scarce. No business can support loafers, and everything on the place not laying eggs (this includes roosters) or not putting on flesh, the young, growing stock, should go to market, week by week.—W. E. Vaplon, Colorado Agricultural College, Fort Collins, Colo.

Oats For Wet Ground.

A Randolph county, Illinois, subscriber writes: "I have a strip of ground which overflowed and was too wet to put in corn. What crop would be profitable to sow on it in June?"

If this ground can now be put in good seed-bed condition, it may be put in cane, cowpeas or soy beans. Any of these crops will have ample time to mature a good hay crop. For hay, perhaps cane or cowpeas would give you surer returns. For these catch crops it is essential that some vigorous work be put upon the seed-bed before the seed goes into the ground. These overflowed areas are frequently neglected until they are literally submerged with weeds, and the ground is hard to handle. Cane is rather delicate for two or three weeks, and cowpeas and soy beans cannot make much headway in ground full of weeds. Millet is the usual crop sown on these lands, but if one has the stock to utilize the forage, cane or cowpeas will give more profitable results. I know it is difficult sometimes to put these lands in fit seed-bed condition, but the outcome of any catch crop will depend largely upon this one thing.—L. C. Brown.

Look Out For Worms.

It is said that 90 per cent. of all the sickness among farm animals is due to stomach and intestinal worms which are generally taken into the system while the stock is on pasture. The larvae develop into worms which crawl to the top of the grass blades, where they are taken in, with the animals' food. The result is sickness and often death, especially among hogs and sheep.

In every case indigestion results, the animals lose flesh and a large share of stock profits is lost also.

There is now on the market a preparation that is guaranteed by its maker to rid all stock of worms. It is known as "Sal-Vet," manufactured by the S. R. Feil Company, Cleveland, Ohio. All you need to do is to let your stock run to it freely and they will doctor themselves. Mr. Sidney R. Feil, the President of this company, offers in his advertisement on page 13 of this paper to send you enough to feed all your stock sixty days before you pay for it and agrees to make no charge whatever if you are not satisfied with the results. You take no risk in testing "Sal-Vet" on this very liberal plan, and consequently every farmer should take advantage of it.

Mr. L. R. George, of Breckenridge, Sangamon county, Ill., is advertising Tamworth swine, which includes pigs of all ages. His postoffice is Breckenridge, and his shipping point is Roby, on the Cincinnati, Hamilton and Dayton Railroad, where all express companies receive pigs for transportation.

First-class stock sheep were being sold at $3.25 to $3.75 per 100 pounds on the St. Louis market, June 30th.

The last Elgin butter quotation in June was 26½ cents a pound.

Whitman Agricultural Co. 6918 S. Broadway, St. Louis, Mo.

THE FARM EQUIPMENT.

Modern Appliances Multiply the Results of Labor and Should be in Use on Every Farm.

Our most progressive farmers are pressing forward in the equipment of their farms till we have a multitude of good farms that are furnished with all the appliances possible to make farming a success. But there are other multitudes of farms on which the old-time methods are in use as well as the old-time appliances.

There are still a good many farmers who are pumping water by hand for their stock, when a power pump would do the work at slight expense and not cost very much to purchase. There are others who have no water pipes in their barns, though the cost of bringing the water into the barns and workshops where needed would be slight. Much of the cost would be for labor that could be done by themselves.

Improvement in farm machinery has been very great in the last twenty-five years, and it pays to look into the various machines being sold with the purpose of finding out which will prove the most economical. To recommend any particular machine or appliance would be unwise, because its use must be first determined. It sometimes pays to buy a poor article rather than a good one. For instance, if a man wanted to buy a brush with which to do a single small job of painting and never expected to use the brush again, it would be foolish for him to put a large sum of money into an expensive, long-wearing brush, when he wanted to use it for but a few hours.

But generally the best machine and the best appliance are best for the farm, for use will continue indefinitely. The farmer who has a single hog to kill will be foolish to invest money in a scalding tank; but not so the farmer who is killing a large number of hogs every year.

On some of the farms we visit we find all appliances for doing such work. One man who raises a score or more of hogs and kills them for local distribution has put in a perfect arrangement for scalding the hogs, with overhead track for moving the carcasses to the cooling room. This is one way to get ahead of the packer in the big city.

The appliances for handling manure are coming in on many farms and should be on all. There are tracks and manure carriers of various makes that can be installed and enormously reduce the work of keeping the stables clean. On large farms this also reduces the number of men employed.

We are complaining at the difficulty of getting farm help, but more appliances for doing the work will reduce the number of men employed. Sometimes the number can thus be reduced one-half. Where many head of stock are kept that have to be fed in stalls, the laying of a track and the purchase of a cart to run on it will reduce appreciably the labor in the distribution of feed.

Where the roads are soft much of the year and much hauling of farm products has to be done in soft weather, the adoption of a wide-tire wheel will save the horses and help the roads, and hasten the performance of any given piece of work.

Being supplied with spraying apparatus of the most improved make will save the loss of some of our vegetable and fruit crops. Where the potato bug is present (and where isn't he?) spraying in time will mean many bushels more of potatoes when the crop is gathered.

Many of our farmers pay too little attention to the improvements in farm machinery. One of the most potent reasons for visiting the State Fairs each year should be to find out what is being done to improve the appliances and machines used on our farms.

Follow Small Grain With Cowpeas.

The great need in both Missouri and Kansas, where grain growing is followed almost exclusively, is the adaptation of systems which will keep soil up to maximum efficiency. In a great many sections clover has played out, and if lands are to be kept in good physical as well as efficient chemical condition, other crops must be found to take the place of clover.

This region has the advantage over regions farther north, because catch crops may be sown on stubble after the grain crop is taken off, and produce a full crop for plowing under the same season. The usual practice is to put corn on stubble ground. If cowpeas are sown on the stubble as soon as the small grain is harvested, it will be a most effective method of keeping the ground in fit condition. Stubble ground lying bare and idle for six months will be in mighty poor condition for the next crop.—L. C. Brown.

Britain's Imported Meat.

Messrs. Weddel & Co., of London, in their review of the frozen meat trade, indicate the following facts:

That 667,942 tons, or 37.61 per cent. of the meat consumed in the United Kingdom was imported from abroad in 1912.

That Australia furnished only 14 per cent. of the imports.

New Zealand only 18.17 per cent.

South America 64.09 per cent.

Other countries the balance, 3.74 per cent.

That 163,973 tons, or 38.3 per cent. of the South American output, were shipped from two Argentine works owned by North Americans, and that this quantity represents 24.55 per cent. of the total imports into the United Kingdom, and 9.23 per cent. of the total consumption.—Farmers' Union Advocate of New Zealand.

Australian Frozen Meat.

The Butchers' and Stock Growers' Journal, of San Francisco, Calif., June 7th, said:

"The installation of a fleet of special steamships for transportation of frozen Australian meats from Sydney to San Francisco was announced this week. In two weeks a Union steamship vessel with the initial cargo will sail from Sydney with 2,000,000 pounds of frozen beef, mutton and veal. Shipments will be increased gradually until each steamer carries to San Francisco between 5,000 and 7,000 tons.

"The entire 2,000,000-pound consignment will be handled by Levy, Schweitzer & Company, of this city, who contracted for all of the available refrigerating space in the steamships 'Aorangi,' 'Moana' and 'Tahiti.'

"The experimental shipments proved more successful than anticipated. The demand could not be supplied and the Union Ship Company consented to place special ships in commission.

"The big meat interests of the United States are preparing to supply the existing shortage with the frozen product."

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1913 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

Write what you have to offer. Estab. 1874.

A. J. CHILD & SONS, St. Louis, Mo.

[Please mention National Farmer and Stock Grower.]

The PERFECT CORN HARVESTER

SOLD DIRECT TO THE FARMERS

$18.00---Freight Prepaid

Send for Booklet and circulars telling all about this labor saving machine.

The Cheapest and Easiest way Possible to Cut your Corn for Shock or Silo.

Oregon, Ill., Oct. 26, 1912.

Gentlemen—After giving the Perfect Corn Harvester a thorough working test in all conditions of corn in the cornfield, we write you that it has adjustment for a great variety of conditions in cutting high, medium or low. We are very much pleased at its light draft and steadiness in following the center of the row. We consider it the very best one-horse corn cutter that the experimental station has ever had an opportunity to demonstrate, and we commend it to the corn cutting farmer.

Very truly, Samuel Ray.

LOVE MANUFACTURING COMPANY - - DEPT. 27, LINCOLN, ILL.

Tell Me How Many Head of Stock You Have

and I'll feed them 60 days before you pay. I'll show you how to make your farm animals grow faster, thrive better, put on more flesh on no more feed — make you more money.

I'll Rid Them of Worms or No Pay.

I'll Prove it to You as I have to these and Thousands of other Farmers.

"I was losing from three to five sheep per day when "Sal-Vet" arrived. Three days after I put it where the sheep could get at it, the losses stopped and I haven't lost a single sheep since."

Arthur Holloway, Mgr. Monument Sheep Co. Monument, New Mex.

"There is no doubt that "Sal-Vet" saved my entire herd of hogs. On all sides of my farm other farmers lost nearly every hog they had. I shall always aim to keep "Sal-Vet" or no hogs."

Peter V. Carey, Prop. Lone Sycamore Farm Rt. No. 6—Fairfield, Ill.

"Sal-Vet" is a wonder working medicated salt which rids farm animals of their greatest enemies—the stomach and intestinal worms. These deadly pests are the cause of 90% of all live stock diseases. They keep farm stock in a poor, weakened, money-losing condition—they mean greater liability to contract hog cholera, swine plague and other contagious diseases. "Sal-Vet" expels these parasites, sharpens the appetites, improves digestion—makes all stock grow into profit fast. Being a salt animals like and run to it freely and THEY DOCTOR THEMSELVES.

Prices: 100 lbs. $5.00; 200 lbs. $9.00; 300 lbs. $12.00; 500 lbs. $21.00. Not intended for less than 400 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. Shipments for 60 days trial are based on 1 lb. of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

Send No Money—Just the Coupon

SIDNEY R. FEIL, Pres.

THE S. R. FEIL CO.

Dept NFSG7-L13 **Cleveland, O.**

All I ask you to do is to fill out the coupon—tell me how many head of stock you have and mail it to me today. I'll ship you enough "Sal-Vet" to last all your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If "Sal-Vet" does not do what I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon NOW.

Address **SIDNEY R. FEIL, Pres.** (119)

The S. R. Feil Co., Mfg. Chemists Dept. NFSG **Cleveland, O.**

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charge when it arrives, report results within 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

THE MATTER OF LITTERS.

Small Litters Due to Pampering—Breeding Stock Require More Exercise Also Necessary.

For many years there has been complaint at the smallness of the litters some sows produce. The battle between the various breeds of swine now takes that into consideration very largely. Even in the same breed there are strains of blood that give good litters and other strains that give small litters.

We find breeders of breeding stock now putting forward the fecundity of their stock as one reason why they should be purchased. Meanwhile some of the little improved hogs produce good litters.

It is claimed that the loss in fecundity in several of our breeds is due to the pampering the swine have received for generations back, and there is no reason to doubt this. High feeding and little exercise may make rapid production of pork easy, but it does affect the ability to reproduce. This is true with human beings as well as with the lower animals.

So far as breeding goes, more must be done along lines of exercise and slow growth to get firmness of muscle and sinews and a paucity of fat. Fat, while a good thing to sell at present prices, proves objectionable in breeding animals.

It is true that in this the breeder is working against two forces, and he cannot work with one force without working against the other. He says that if he does not make his breeding animals lay on fat as fast as possible, his breeding animals will not transmit that quality to their offspring, and that quality is one of the chief merits of improved breeds of swine. That is true, but if that quality is developed to a point where the sow will not produce progeny at all, what is the value of the tendency to lay on fat?

We have probably gone far enough in the direction of trying to get quick maturity. Let more be done now to get stamina and fecundity, so that where litters of five are now produced litters of ten or more may be common.

We can afford to sacrifice a few weeks in the time of reaching a certain killing weight if we can thereby secure more young animals to feed. It often makes a great difference with the profits whether a man is able to secure fifty pigs for feeding or a hundred.

In the breeders, especially, slower growth must be put up with, and the animals must be made to work harder for a living. A little more attention must be given to the swine pasture and a little less to the compounding of foods that will stimulate rapid growth in the breeders.

If a hog or pig is being fattened for the pork barrel, it is logical to push him forward as fast as possible; but the breeder must be treated in a different way.

The feeding of more roots will help, for they have in them succulence without so much of the material out of which quick fat is made. To get stamina there must be less reliance on high feeding and more on exercise. If the hogs have to do a good deal of walking to obtain their food, that will be a help.

There was one farmer that used to follow the practice of feeding one sow to his swine in one part of his pasture and the next in a distant part of the same pasture. The sows took frequent trips back and forth in search of the food that they found now and then. This may not be the best way to induce exercise, but exercise in a considerable quantity must be secured.

Buy Your Silo Now Save 40% to 60%

You can now buy, direct from our mill, a Seattle Silo of clear fir, at a price that will amaze you. We can underprice everybody because we own the lumber of which we manufacture the silo. Only one operating expense for us. Only one profit for you to pay.

Seattle Silos

are made from "Puget Sound" fir—the choicest that grows. Straight and close of grain. No knots or sap. Wear for years and years.

The doors are of a new improved swinging type and quick detachable. The door bars form a safe, strong ladder, from which the hoops can be easily tightened. A great idea!

Write today for special silo folder. Our low prices will surprise you. We can usually arrange to give you the benefit of practically carload rates on shipments of single silos. Write for special offer to one farmer in each township.

Save 40% to 60% on lumber and millwork

Stop paying hold-up prices to the local lumberman. He gets his materials fifth-handed. Four other middlemen get big profits. No wonder lumber is high and the quality low.

With us, quality is high and price is low. We own thousands of acres of choice timber in Oregon, Washington and British Columbia. We cut and log the timber. Manufacture it into choice lumber and millwork in six big mills. Only one operating expense—only one profit. Shipments made within 24 to 48 hours. Average delivery, two weeks. Send us your bill of materials for estimate. Satisfaction guaranteed. Write today for catalog and delivered prices.

OIL TRACTORS ON THE FARM.

Facts and Figures in Regard to Economy of Farm Operations Under Existing Conditions.

It is several years since we published a government bulletin, which stated that the oil tractor by economical service was pushing the steam traction engine out of business.

We have recently obtained an article by Mr. A. G. Barnet that goes into the subject deeper from a practical working standpoint, and we take such as refers to the moderate size tractors.

The farmer contemplating buying a tractor naturally thinks of what the machine will do for him. How much it will save. He knows how much time and labor it requires for the different operations on the farm using horses, but the amount the tractor will really do seems hard to estimate in view of the claims made by various manufacturers.

Take the operation of plowing, for instance. The farmer knows how much time and stock it requires to do the work. To estimate on the work with a tractor one may use the following figures, being certain always to note the exact nature of the soil and the per cent. of grade of the hills on the land.

The most accurate tests on level ground where the tractor gets a good footing show the following draft per square inch of cross section of plow. (Cross section equals width of plow times depth plowed).

In sandy soil, draft is 3 pounds per square inch of cross section of plow.

In clay soil, draft is 8 pounds per square inch of cross section of plow.

In clover sod, draft is 7 pounds per square inch of cross section of plow.

In virgin sod, draft is 15 pounds per square inch of cross section of plow.

In prairie sod, draft is 15 pounds per square inch of cross section of plow.

In gumbo, draft is 20 pounds per square inch of cross section of plow.

Taking, for example, a plow rig of five fourteen-inch bottoms and wishing to plow a depth of six inches, figure the draft for the various soils as follows: (Cross section equals 5x14x6, or 420 square inches).

3x420 equals 1,260 pounds draft in sandy soil.

8x420 equals 3,360 pounds draft in clay soil.

7x420 equals 2,940 pounds draft in clover sod.

15x420 equals 6,300 pounds draft in virgin sod.

20x420 equals 8,400 pounds draft in gumbo.

The manufacturers give the draw-bar pull of their engines. To figure the number of bottoms which can be pulled, divide the draw-bar pull by the cross section of one plow, multiplied by the draft per square inch of cross section of plow. Thus, plow, 14 inches; depth, 6 inches; sod, clover.

14x6x7 equals 588 pounds draft of one plow.

Let us say the draw-bar pull is 4,000 pounds and the land is level and has good, solid footing.

4,000 divided by 588 equals 6.8.

So we can safely estimate on at least six bottoms.

Each one per cent. of rise in grade—rise of one foot in 100 feet—adds one per cent. of the weight of the tractor and plows to the draft. A five-plow gang weighs about 3,300 pounds and the best field weight of a fifteen to twenty-five horse-power tractor is about 16,000 pounds.

Thus, using the example shown above of five fourteen-inch plows plowing to a depth of six inches, the drafts on a five per cent. grade will be as follows:

Sandy soil....1,260 plus 965 equals 2,225.
Clay soil.....3,360 plus 965 equals 4,325.
Clover sod....2,900 plus 965 equals 3,865.
Virgin sod...6,300 plus 965 equals 7,265.
Gumbo.....8,400 plus 965 equals 9,365.

Mr. A. G. Rusel, of Janesville, Wis., states: "In regard to my fifteen to twenty-five oil tractor I would say I plowed forty acres in three days and handled the plow and engine alone and pulled six fourteen-inch plows six inches deep. The third day I plowed fourteen acres in nine hours on twenty-five gallons of kerosene costing me 6¼ cents per gallon. At present I am plowing sod, pulling the six fourteen-inch plows six inches deep and have plenty of power and get the best of service."

The draw-bar pull of the machine Mr. Russel owns is 4,000 pounds, so pulling the load he speaks of is indeed a remarkable showing, regardless of how light the soil is. Using Mr. Russel's figures shows a cost of 11 cents per acre for fuel.

As tractors largely go into the hands of men who, while they have considerable mechanical ability, have neither the time nor the facilities to make extensive repairs or adjustments, and as they are located at a distance from properly equipped machine shops, it is of the very greatest importance that the machines be of the most rugged construction, so that breakages are reduced to a minimum and the least possible time be lost on account of repairs.

The following is the experience of Albert Andrews, of Crystal City, Manitoba:

"With regard to the fifteen-to-twenty-five oil tractor which I purchased, I wish to state that I have found it to be very reliable and more than strong enough to drive a twenty-five by forty-two separator with all attachments. I would especially recommend anyone desiring a tractor easy to start and simple of operation to buy this special fifteen-to-twenty-five type."

"The fuel consumption I find to be about twenty-five gallons per day."

A fifteen-to-twenty-five horse-power oil tractor operated a thirty-six by fifty-six separator for E. B. Conibar, West Brooklyn, Ill. The average day's run throughout the 1912 threshing season was about 3,000 bushels of oats in nine hours.

Two tons is a good load for two horses on a hard road. A fifteen-to-twenty-five oil tractor will pull sixteen tons; a thirty-to-sixty oil tractor about thirty-seven tons; thus simplifying the hauling of crops to market.

The big advantage of the oil tractor over the horses is the fact that the tractor is not an expense except while actually in operation. The horses, on the other hand, are a constant expense. They are piling up the same feed and stable charges on Sundays, holidays and rainy days. The oil tractor ceases to be an expense the minute the power is shut off.

Although this article is based upon operations of only one make of tractors, the economy in work applies in a certain measure to all. Anyone requiring further information may address Mr. A. G. Langworthy, care Fairbanks, Morse & Co., Wabash avenue and Eldridge Place, Chicago, Illinois.

15-25 H. P. Fairbanks-Morse Oil Tractor pulling 6 14-inch plows 6 inches deep through sod on the farm of A. G. Russel, north of Janesville, Wis.

Put Up Hay Right.

The leaves of alfalfa hay contain the greatest percentage of protein, consequently they are the most valuable part of the crop. Alfalfa cured by proper methods will not lose over ten to fifteen per cent. of its leaves, but frequently the loss amounts to forty to fifty per cent., all due to poor methods of handling and curing. The first cutting of alfalfa should be made when not more than one-fifth of the heads are in bloom. This is very important, for if the first cutting is put off too long it will not only materially reduce the total yield of the crop, but the quality will not be so good. Early cutting enables the plants to start right off making growth for the second crop, and if the cuttings are properly timed alfafa may be cut four or five times during the season.—L. C. Brown.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloh. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down, and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number. The price of each pattern is 10 cents.

For Many Purposes.

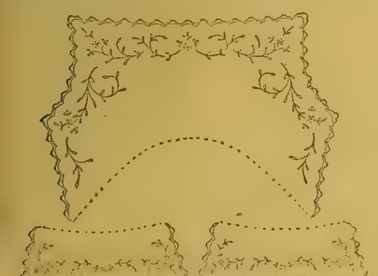
No. 746 is a design for sprays of carnation pinks, suitable for embroidering sofa cushions, table covers, bureau scarfs, etc. Two sprays of each size are given. The flowers may be worked by long and short stitch, the calyces, buds, leaves and stems in solid embroidery, or all may be simply outlined.

Design For an Infant's Cape and Cap.

No. 744.—Design for embroidering an infant's cape and cap. Especially adapted to May Manton's Pattern No. 7912.

A Bulgarian Band.

No. 745 is a design for embroidering a band in Bulgarian style. The band is two and a half inches wide; two yards are given.



For a Child's Dress.

No. 743.—Design for embroidering a child's sailor collar and cuffs.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Ways With Potatoes.

Potato Balls.—Mix a few bread crumbs with the mashed potato left from dinner, season with pepper and salt and add enough sweet milk to work up nicely into balls. Flatten these to an inch in thickness, roll in flour and fry to a rich brown.

Browned Potatoes.—Pare and slice enough potatoes to make a pint. Put them into a buttered baking-pan and pour over an egg beaten with one-half cup of milk, season, bake for twenty minutes in a covered dish, then remove the cover and allow to brown.

Scalloped Potatoes. — Slice raw potatoes and put them into a buttered baking-dish, seasoning each layer with grated or chopped onion. salt, pepper and butter. Dredge the top layer with flour and cover with milk. Bake until brown.

Add to the roast of any kind of meat enough pared potatoes for the meal. Cover the roaster and let them cook about three-quarters of an hour, or until the meat is done. They have a rich flavor distinctively different from than when cooked in any other way.

Cheesed Potato.—Season mashed potato and press it firmly into a dish so that the layer will be about half an inch thick. It must be left until entirely cold and firmly set. Cut with a biscuit cutter and fry on one side to a rich brown. Place the cakes in a baking-pan, brown side up, brush over the top with the white of an egg and cover with grated cheese. Bake until the cheese is melted.

Creamed Potato.—Heat one pint of milk, add a little butter, salt, pepper and a heaping teaspoonful of flour rubbed smooth in cold milk or water, stir in slowly the cold sliced potato, and when the mixture is entirely heated through stir in one well-beaten egg.

Potato Croquettes.—To every quart of hot mashed potato add one tablespoonful of butter, four tablespoonfuls cream, beaten yolks of four eggs, teaspoonful onion juice, teaspoonful salt, tablespoonful chopped parsley. Stir over the fire until the mixture cleaves from the sides of the dish. Cool, shape into rolls, dip into beaten egg, roll in bread or cracker crumbs and fry brown.

Mashed Potato.—Boil until soft, mash with a wire masher, season with pepper and salt and stir in a cupful of hot milk. Keep on mashing until all is of a creamy texture and fine grain. Just before serving add a tablespoonful of butter. Having the milk hot and a thorough mashing are the secret of success.

Potato Stew.—Pare and slice one quart of potatoes. Fry two slices of pork in a kettle until brown, add one chopped onion and one tablespoonful of flour. Stir well and let them brown. Then add one quart of boiling water and the potatoes. Boil until the latter are soft, add salt, one cup of milk and a few crackers.

Saratoga Chips.—Pare and slice in very thin slices half a dozen potatoes. Let them stand at least an hour in cold water (over night is still better). Drain and wipe off the water on a clean towel and fry until brown in very hot lard. When crisp, remove into a colander to drain, sprinkle salt and pepper over them. Serve at once, or they are fine cold for the picnic lunch.

Moulded Potatoes.—Boil and mash as for the table. Wet a teacup and press as many cakes as are needed. Turn them out into a tin, rub beaten egg over each and bake until nicely browned.

Potato Fritters.—Add one or two beaten eggs to each pint of left-over mashed potatoes, beat well and drop by the spoonful into hot drippings. Fry brown on both sides.

Potato and Bacon. — Slice cold boiled potatoes and one onion together. Fry several thin slices of bacon until it is well browned, take it out and let the gravy cool, then add two tablespoonfuls of vinegar, salt and pepper to taste. Serve cold.

Brown Potato Soup.—Peel, quarter and soak in cold water for an hour one dozen potatoes. Then put with them a large onion sliced into three tablespoonfuls of good meat drippings and let them brown, stirring frequently to avoid scorching. When nicely browned add two quarts of boiling water, cover the kettle and let simmer until the potatoes are soft. Put through a colander, return to the kettle and stir in a large spoonful of flour, and spoonful of browned flour, in enough water to prevent their going in lumpy. Boil until this thickens sufficiently, then add a tablespoonful of chopped parsley, summer savory, or sweet basil, with salt and pepper to taste.

Potatoes With Green Peas.—Scrape or with a stiff brush remove the skin from enough new potatoes for a meal. Shell a part of green peas, and if they are infested with weevil, the easiest way to detect the bad peas is when the pod is first opened, before the row is broken. Place the peas in a kettle of boiling water, and when they have commenced to boil, add the potatoes. When all are done tender, drain and season with pepper and salt and cover with butter. If the peas are a bit old they will require more cooking, and a tiny bit of soda may be required to render them soft. If soup is desired, wash the pods and cook in a separate water, strain and add this to the water in which the potatoes and peas were cooked. Add butter, pepper and salt.

Warmed Potato.—Slice very thin and lay in a large biscuit tin. Season, and place bits of butter over the top, brown in the oven and serve hot.—Bessie L. Putnam.

From a Single Cherry Tree.

E. W. Terry, of Pattonville, St. Louis county, horticulturist and school teacher, will graft 2,000 shoots from a cherry tree which this year produced fruit that sold for $43.20. So far as he can learn, it is the only tree of its variety in America. It was brought from France thirty years ago and has been bearing cherries twenty-seven years.

Its fruit is larger than the ordinary cherry and contains less juice. Fruit remains on the stem many days after it ripens.

Two trees of the variety were brought fom Europe by former Judge Alexander Martin. One died. The living one never has missed a crop in ten years. The yearly amount produced has not varied three trays. The quantity taken to market a few days ago was thirty-two trays. They sold for $1.35 each.

Efforts have been made to propagate the tree, but the seeds will not sprout. They are smaller than the ordinary cherry seed. Terry has sent to France for some of the same wood on which the tree was grafted, so the same standard of fruit may be maintained. The tree resembles a large oak and the leaves look something like those of the chestnut. The yield this year is believed to be the record in point of quantity in the state.

Mechanical, Electrical and Civil Engineering

The wonderful expansion in all fields of activity has created a great demand for Mechanical, Electrical and Civil Engineers. You can save a full year's time at

Highland Park College

Vigorous and thorough instruction by expert specialists. Get your B. S. degree and be working a year before graduates of other colleges. Three years of 48 weeks each. Splendid opportunity for practical work, better than at almost any other technical college. Our graduates are filling good positions in all parts of the country.

Special One-Year Courses

Electrical Engineering—Designed especially to prepare young men for responsible positions, such as superintendency of the smaller electric power and lighting stations, power plants, etc. Diploma awarded.
Steam Engineering—Qualifies young men to take charge of steam power or heating plants and to run stationary engines. Thorough instruction in engine and boiler room work.
Machinists' Course—For those who want to become machinists in the shortest time. Plenty of shop work, not much text-book study. Special attention to accuracy and speed.
Automobile Machinists' Course—Arranged especially for those who want to secure a position in an automobile factory or to manage a garage. Students overhaul, repair, assemble and run cars. Very little text-book study.

Special Courses in Gas, Automobile and Traction Engineering

Each course may be finished in three months. Students work right in machine shops, traction engine house and auto garage; repair and drive engines and automobiles. Gas Engine Course may be taken with either the Traction Engine or Auto Course without extra tuition.
In all the Engineering Courses actual shop work is done by the students. Every aid is given to ambitious students with limited time and money. The tuition fees are small and living expenses low. The work done here is equal to that of the best Eastern colleges. For catalogue address

SELECTED POETRY.

THE DAY IS GONE.

The day is done and darkness
Falls from the wings of night,
As a feather is wafted downward
From an eagle in his flight.

I see the lights of the village
Gleam through the rain and the mist,
And a feeling of sadness comes o'er me
That my soul cannot resist.

A feeling of sadness and longing,
That is not akin to pain,
And resembles sorrow only
As the mist resembles rain.

Come, read to me some poem,
Some simple and heartfelt lay,
That shall soothe this restless feeling,
And banish the thoughts of day.

Not from the grand old masters,
Not from the bards sublime,
Whose distant footsteps echo
Through the corridors of Time.

For, like strains of martial music,
Their mighty thoughts suggest
Life's endless toil and endeavor;
And to-night I long for rest.

Read from some humbler poet,
Whose songs gushed from his heart,
As showers from the clouds of summer,
Or tears from the eyelids start.

Who, through long days of labor
And nights devoid of ease,
Still heard in his soul the music
Of wonderful melodies.

Such songs have power to quiet
The restless pulse of care,
And some like the benediction
That follows after prayer.

Then read from the treasured volume
The poem of thy choice,
And lend to the rhyme of the poet
The beauty of thy voice.

And the night shall be filled with music,
And the cares that infest the day
Shall fold their tents, like the Arabs,
And as silently steal away.
—Henry Wadsworth Longfellow.

THE LITTLE CITY FELLER.

The little city feller was as pale as he could be—
My mother had him sent out for a week, so he could see
The really, truly country, an' get lots of milk an' eggs,
An' put some fat, ma said, on his pore little arms an' legs;
An' then she told me he ain't got no good home like I got,
An' never knew his father an' his mother, like as not.

At first he sort of dumped around an' wouldn't play a thing,
An' wouldn't talk or answer me, but set there in the swing,
Until I brought my rabbits out, an' took him down to see
Old Bess an' her new spotted calf that daddy give to me.
I took him to the crick, an' say! what do you think of him?
A-goin' on eleven an' ain't never learned to swim!
An' then we drove the cows home and we helped corral the sheep,
An' he was so done up an' tired, he et, an' fell asleep
Right at the table, an' my pa he carried him to bed,
Because he wasn't bigger than a minute, daddy said;
Said we must help him get red cheeks an' muscle, like I got,
An' cut up Ned—I'd have to show him how, as like as not.

But now I guess there ain't no devilment that he can't find.
He keeps me goin' some, but I ain't very far behind.
Ma says the two of us is all a mortal can endure,
An' just another week of it would drive her crazy, sure.
He's company, an' goin' home to-day, as like as not,
Or I bet he'd get a tannin' with a hick'ry, like I got!
—National Magazine.

COUNTRY SCENES.

First crop o'clover in and second on the way,
Corn about three inches high and crackin' all the day;
Peas in pod most fit to pick and many a strawberry red
A-kissin' hands unto the cook f'um out the early bed.
Cow bells tinklin' down the glade;
The bull flies fairly swishin';
An' some folks think 'at man was made
For nothin' at all but fishin'!

Such headin' of the wheat these days a-goin' on;
Mom Honey nickle at the gate to sweeten up the dawn;
The motley cow way over there in blackberries to her knees,
And ain't the world most butterflies, and bees?
Brown jug underneath a tree
With water cool and sweet;
An' some folks thinkin' man was made
For nothin' but smoke and eat!

Few cherries that the frost has missed a-growin' mighty red,
And Mister Robin on a limb all fixed to go ahead;
Blind bottle-flies a-tryin' their best to buzz like bumblebees,
And, Lord, how many gnats is they to every critter, please!
Cool music of the little brook
That babbles through the glade;
An' some folks thinkin' all a man
Kin think uv now is shade!

Oats gettin' that silver-green they get before it's time to ripe;
Old whitewash man a-stoppin' again to light his corncob pipe;
Watermelons beginning to vine, and cantaloupes the same,
A dad-burn cathird over there tellin' everyone his name.
Talkin' harvest at the store
An' tryin' on yaller shoes;
An' some folks thinkin' a man ain't got
No right to dream an' snooze!
—The Bentztown Bard.

A MEMORY IN THE FIELDS.

Just around the corner there is music soft and sweet,
The sunbeams on a holiday go dancing down the street.
You see a path where blossoms bend to greet you on
There, when the first green shoots of tender corn
Show on the plow; when the first drift of white
Stars the black branches of the spiky thorn,
And afternoons are warm and evenings light,
The shivering daffodils do take delight,
Shaking beside the brook, and grass comes green,
And blue dog violets come, and glistening celandine.

And there the pickers come, picking for town
Those dancing daffodils; all day they pick;
Hard-featured women, weather-beaten brown,
Or swarthy-red, the color of old brick.
At noon they break their meats under the rick.
The smoke of all three farms lifts blue in air
As though man's passionate mind had never suffered there.

And sometimes as they rest an old man comes,
Shepherd or carter, to the hedgerow side,
And looks upon their gangrel tribe, and hums,
And thinks all gone to wreck since master died;
And sighs over a passionate harvest tide
There, in the quiet fields among the daffodils,
Which Death's red sickle reaped under those hills.
—John Masefield.

THE IDEAL.

I want to find a summer boarding place
Where no mosquitoes ever may be found,
Where all the eggs are fresh and there is space
For one to wander aimlessly around.

I want to find a place where not a fly
Will ever come to perch upon my plate,
Where no one will be petulant if I
Sometimes get down to breakfast rather late.
I want to find a place beside a stream
Where I, when I am so inclined, may wade;
Where there will be abundance of rich cream
And bread and pie like that which mother made.

I want to find a place that shall be free
From ragtime and unnecessary show;
Where others will have deep respect for me
And ask no questions when I come and go.

It must not be too cool and not too hot;
I think I have described the place I seek;
For what I want in such a favored spot
I'm willing to pay seven plunks a week.
—S. E. Kiser, in Chicago Record-Herald.

Working For Choice Honey.

Too many who are not professional apiarists forget that the half-way method of doing things is not profitable. They keep a few swarms of bees, letting them mostly take care of themselves, when, by giving them only a few hours of extra attention, and most of this at a time when other things were not pressing, the same bees might be induced to produce many pounds more of honey, and this in a marketable form.

The "chunk honey," which is more or less wasted in taking it off, and which may contain bee bread and other impurities, may be exchanged for the neat boxes of pound size, which are easily handled in market, and quickly placed in the hive. An up-to-date hive costs not nearly so much as the loss in honey through lack of it, and when once obtained it will last for a lifetime. The section boxes, which are sent out in the flat and easily put together, induce neat work in honey making. But to insure this, it is also wise to use the comb foundation or "starter." When this is done the bees are bound to build straight; otherwise they may start the comb crosswise and thus waste valuable space as well as get irregular comb. The section boxes cost quite a little less than a cent apiece, and the starter, which costs five cents, will easily fit out for sixteen pounds of honey.

The starter comes in four-inch strips. Cut each into four squares, and each of these again into four pieces by two diagonal lines. Fasten a piece in the top of each section box with a bit of melted beeswax. A small block of wood on which is tacked a board just half as thick as the section will regulate the placing of the starter. Slip it under the section and lay the starter on the raised piece, with the longest side of the starter next to the inside of the section. Then with a little brush or feather touch the melted wax and it is in place.—Bessie L. Putnam.

The Goodyear Tire Book.

Automobile tires wear out, no matter how good they are. Many automobile owners wait until they are in need of new tires before they study the subject. We find that it pays to be posted in time. We advise our readers to send to the Goodyear Tire and Rubber Company, Akron, Ohio, and ask for a copy of the Goodyear Tire Book. It tells the whole story of the automobile tire. See page 7 of this edition.

No Voice in the Matter.

Severe Father—Eileen, what is the meaning of the diamond ring on your finger."

Willful Daughter—"It means, papa, that Jack has something to ask you that it will do you no good to refuse."

The Farmers' Directory of Business Interests.

A NEW PUBLICATION BY THE HALE PUBLISHING CO., OF ST. LOUIS, MO., ISSUED QUARTERLY AT 50 CENTS A COPY, OR $1.00 PER YEAR.

JULY, 1913, EDITION NOW READY FOR DELIVERY AND WILL BE SENT POSTPAID ON RECEIPT OF PRICE—THE OCTOBER EDITION IS NOW IN PREPARATION AND ORDERS FOR COPIES FOR THE BOOK AND ADVERTISEMENTS TO APPEAR IN IT ARE NOW SOLICITED.

THE FARMERS' DIRECTORY OF BUSINESS INTERESTS is designed to contain the name, occupation and business address of all the firms engaged in such business, that their name, address and line of goods manufactured or handled may be of value to general grain farmers, stock raisers, ranchmen, dairymen, fruit and vegetable growers, poultry keepers, and all others engaged in agricultural pursuits. Lists are arranged by states.

INDUSTRIES INCLUDED IN THE BOOK.

The list includes an alphabetical arrangement of names, addresses and occupations of individuals and firms representing the following industries: Agricultural implements; Auctioneers, live stock; Building and construction; Cattle troughs, self-feeders, etc.; Cisterns and tanks; Cotton-ginning machinery; Dairy apparatus; Electric farm appliances; Engines for farm use; Farm publications; Fertilizer manufacturers; Fruit specialists; Grain graders and elevators; Horse goods; Horse and mule dealers; Incubators and brooders; Irrigation plants and machinery; Live stock salesmen and purchasing agents; Merchants dealing in farm goods; Motor cars and trucks; Nurserymen; Packers and wholesale butchers; Poultry supplies; produce commission salesmen; public abattoirs; Roofing; Sale stables; Seed growers and dealers; Sheep dips and specialties; Stock foods and tonics; Stock yards and markets; Stump pullers; Swine breeders' goods; Vegetable and fruit packages; Vehicles and harness; Veterinary appliances; Water systems; Well-drilling tools; Windmills and motors; Wire goods and fencing; and all other industries having business connections with the farm interests of the country.

The July edition contains 5,000 such names and addresses. Send 50 cents for a copy of the July edition. It is worth the money and more.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Easily Made, Advance Styles, Fashion and Perfection—The Standard of the World.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In this edition we present for consideration very seasonable patterns absolutely up-to-date, with direction for ordering. The price of each pattern is 10 cents.

No. 7889.—Fancy Blouse For Misses and Small Women. Fourteen, sixteen and eighteen years. With long or elbow sleeves.

No. 7887.—Fancy Blouse. 34 to 42 bust. With long or three-quarter sleeves.

No. 7834.—Tucked Semi-Princess Dress For Misses and Small Women. Fourteen, sixteen and eighteen years.

No. 7888.—Two-piece Skirt. 22 to 32 waist. With fullness at side seams laid in plaits with overlapped edges below, with high or natural waist line.

No. 7507.—Four-piece Skirt. 22 to 32 waist. With high or natural waist line.

No. 7866.—Middy Blouse. 36 to 42 bust. To be worn over or under the skirt, made with or without applied yoke and shield that can be made low or high, with long, elbow or short sleeves.

No. 7812 A.—Blouse Coat in Balkan Style. 34 to 40 bust. With three-quarter, bell or long plain sleeves, straight or diagonal closing, peplum that can be made with square or round front edges.

No. 7873.—Semi-Princess Gown. 34 to 44 bust. With three-piece skirt in cutaway or straight outline, three-quarter or long sleeves, square or pointed collar, with or without chemisette.

No. 7860.—Girl's Dress. Ten, twelve and fourteen years. No. 437 Embroidery Design. With three-piece skirt, with set-in sleeves in elbow or full length, with collar that can be square or round at back.

No. 7829.—Girl's Dress. Four to eight years. Closing at back, with elbow or long sleeves.

No. 7786.—Box Plaited Blouse. 34 to 40 bust. With or without chemisette and under sleeves.

No. 7881.—Loose-belted Coat. 34 to 40 bust.

No. 7884.—Semi-Princess Dress For Misses and Small Women. Fourteen, sixteen and eighteen years. With three-piece skirt in cutaway or straight outline, long or short sleeves, with or without chemisette.

No. 7867.—Girl's Balkan Dress. Six to twelve years. With draped or plain belt.

No. 7878.—Child's Blouse Dress. Four to eight years. With straight plaited skirt, short or long sleeves, with or without shield.

No. 7871.—Child's One-piece Kimono. One, two and four years. With short or long sleeves, with or without seam at back.

Send this advertisement to us with 98 CENTS and watch will be sent by return mail post paid. Satisfaction guaranteed or money refunded. Send 98c today. Address R. E. CHALMERS & CO., 538 So. Dearborn St., CHICAGO.

98 CENTS POST PAID

To advertise our business, make new friends and introduce our big catalogue of Elgin watches we will send this elegant watch postpaid for only 98 cents. Gent's size, high grade gold plate finish, lever escapement, stem wind and stem set, accurate time keeper, fully Guaranteed for 5 Years. Send 98 cents today and watch will be sent by return mail. Satisfaction guaranteed or money refunded. HUNTER WATCH CO., Dept. 28, CHICAGO, ILL.

No. 7861.—Infant's Dress and Barrow Coat. One size.

No. 7883.—Boy's Russian Blouse Suit. Two to six years. With straight trousers, square or high neck, short or long sleeves.

No. 7870.—Boy's Blouse. Four to ten years. With short or long sleeves, neck band or sailor or round collar, with or without yoke on back.

No. 7819.—Child's Overalls. Two to six years.

The above patterns will be mailed to any address by the Pattern Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

LAND OF RAINLESS WHEAT.

South African Agriculture Goes Farther Than American Dry Farming.

From London, England, on June 7th, was sent a statement as follows:

"What seems one of the most wonderful and fruitful discoveries of the world, says the Tablet, was announced and described by Mr. Macdonald in a lecture of the Royal Colonial Institute recently. A few years ago it was universally believed that in the dry belt in South Africa agriculture was tied to the water furrow. This meant a few cultivated patches islanded in a desert. In fact, tens of thousands of acres are to-day carrying crops in the dry district with no help from irrigation. We quote the lecturer's words:

"'America has grown wheat on an eight-inch rainfall. Australia has grown wheat on a five-inch rainfall, but we in South Africa have grown a rainless wheat. That is to say, that during the past season at Lichtenburg, which is in the dry zone of the Transvaal, we have grown a wheat without a single drop of rain falling upon it from seed time until harvest. This is the Durum wheat, Apulia, which we originally introduced from the dry belt of Italy. Our success has been due to the use of what we term 'moisture-saving fallows.' The great problem of South African agriculture is not the problem of fertility. It is the problem of the conservation of moisture.

"'We have now solved that problem and made possible the immediate settlement of our dry or arid lands. But the triumphs of science as applied to agriculture in South Africa are not confined to the discovery of rainless wheat. The locusts which have plagued the land for ages are to-day kept under control. The progress of the insect invaders, which from the days of the Pharaohs till yesterday was regarded as irresistible as fate, can to-day be easily checked by means of arsenical sprays.

"'The flight of every swarm of locusts is registered and telegraphed to the headquarters of the Union Department of Agriculture at Pretoria, and when the young locusts emerge the veld is ringed by poisonous grass, over which they can not pass. A short ago the government of Peru sent an expert to the Transvaal to study our methods of locust destruction, but the only locust which the entomologist could show him was to be found in the museum. The authors of such discoveries as these, the real creators of wealth, are surely the true heroes, as they are certainly the benefactors of the race—yet what is their personal reward, either in wealth or fame?"

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent prepaid for $1. HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. Large booklet containing valuable information FREE. DR. M. NEY SMITH, Specialist, Office, 302 N. 12th St., - ST. LOUIS, MO.

Buckwheat as a Catch Crop.

Buckwheat is very highly regarded by beekeepers as a plant that will furnish the materials for a good honey flow, but the general farmer would find it a crop that is as profitable as any other. This is more particularly true when for any reason a staple crop fails and the field would lie idle to bear only useless weeds.

Buckwheat has the advantage of requiring only a short season in which to mature, and if the grain is not all sold, the chickens will be very glad of a share. Just notice how they will follow hedges and fences where the wild buckwheat grows, to pick up the seed when frost has opened the "pods."

The writer can recall when nearly every family grew a patch of buckwheat to furnish enough materials for cakes for the winter breakfast instead of depending upon substitutes like "Aunt Jemima's Pancake Flour" and others not so well known, that are composed of cheaper and commoner grains than buckwheat and lack the distinctive flavor that made made the pancakes from this flour so delicious.

The present way of farming runs more to specialization, but the small farmer makes the best living and stands the best show of success if he grows a little of everything, and even growing a patch of buckwheat is not to be despised. The best profit would perhaps result if he is situated so as to grow more than he needs for home use, for when "having his hand in" it takes but little more time to raise enough to make a tidy bit of money from the sale of the surplus after paying expenses.

A few years ago, when a late spring flood drowned out the corn on a Missouri river bottom farm, the owner decided to try buckwheat as an emergency crop, and he netted twelve dollars to the acre after paying for seed and a reasonable price for all labor expended on the crop —not so bad, when he might have lost out entirely, as it was too late for corn, or, in fact, any cash crop, and he could not feed up all the forage he had planted in other fields.

Of course, his land had plenty of immediately-available plant food, which gave the crop a good start; but on poorer land good results can be obtained with commercial plant foods to give the crop the essential elements for luxuriant growth. Buckwheat does not remove as much nitrogen or potash as some of the other cereals, but it has a shorter perior of growth and so responds to fertilization in a marked manner.

A fertilizer containing four per cent. nitrogen, eight per cent. phosphoric acid and nine per cent. potash, applied at the rate of 300 pounds to the acre, will greatly add to the yield if the land is not in a good state of fertility. Sixty pounds of nitrate of soda, 150 pounds of acid phosphate and fifty pounds of sulphate of potash have been used by a farmer who makes a business of growing buckwheat for the general market, and he says that the corn crop following is always a paying one, without further fertilization.—D. C. Cornman.

Concerning Concrete Construction.

Anyone who wishes to obtain the latest and most direct information concerning concrete on the farm should write for a "Free Book on Concrete Work" and address either the Atlas Portland Cement Company, Dept 165-, 30 Broad street, New York, N. Y., or Atlas Portland Cement Company, Dept. 165, Corn Exchange Bank Building, Chicago, Ill.

THE BOOK OF LIVE STOCK CHAMPIONS.

Published in 1912.

THE LATEST AND COMPLETE EDITION.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

Seven Hundred and Fifty Pictures of Grand Champions in a Book Bound in Blue Cloth and Gold Title.

The List Includes Three Hundred and Twenty-five Beef and Dairy Cattle Pictures, Two Hundred and Eighty-four Magnificent Horse Pictures; Also Splendid Representation of Hogs, Sheep, Jacks and Jennets, Goats and Ponies. All the Breeds Represented With the Very Best Ever Grown.

THIS is the latest edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented magnificently. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Old and New Friends and Patrons.

We offer single copies of the best edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. Every copy is handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

DR. ALONZO D. MELVIN, Chief of the Bureau of Animal Industry of the United States Department of Agriculture. On July 24th DR. MELVIN was directed to undertake a three-months' investigation of the meat-packing industry in the principal cattle-growing countries of South America. DR. MELVIN will look into the slaughtering, canning and general packing-house business of Argentine, Brazil, Uruguay and Paraguay. DR. MELVIN is fully competent to study these matters, for the reason that he is thoroughly posted in regard to the American packing houses. Congress is now legislating for the purpose of admitting all the South American meats into this country free of duty, and of course it will be interesting to know what to expect. He will find our good friends, the Chicago packers, nicely established in Argentine and ready to take advantage of United States legislation in favor of their Argentine properties.

The Peach-tree Borer.

Many wonder why their peach trees are such short-lived members of the orchard, and yet those most observing will readily detect one or several reasons why they may die young. One of the most common of insect enemies is the peach-tree borer, the presence of which may be readily detected, if we but know what to look for.

Gum may exude from the bark of the tree because of injury, as hail, or any bruises upon the trunk or branches. It is the nature of the tree to supply this gum around any scar. But if there is a trace of something like sawdust in this gum you may be fairly certain that the borer is at work. The eggs are laid on the bark of the tree near the ground, and the larvae bore down in the bark just below the surface. Their burrows are soon filled with a gummy secretion from the tree and thus the presence of the pest is readily detected. If unmolested, the full-grown larvae come to the surface and make a cocoon of borings fastened together with silk. The perfect insect may emerge any time from May to October, but the greatest numbers appear in June and early July.

But not all of the borers are confined to the roots. Examine the trunk and branches. If there is fresh gum and "sawdust," dig in with a knife and the chances are that you will not go very far into the cavity without unearthing a whitish larva nearly an inch long, if it is full grown. There is rarely more than one in a place, though there may be numerous burrows on the same branch.

One preventive is to make a mound a foot high around the roots of the tree in early summer and remove it in September. This exposes the tender larvae to the weather and they are killed. Some paint around the tree with a paint containing Paris green. But the safest way is to watch for the tell-tale gum, and, having located the pest, dig it out.—Bessie L. Putnam.

Is Sweet Clover (Melilotus) a Coming Forage Plant?

We know a great deal about the clovers, but there is no doubt that we have still more to learn. The last word has not been said on clover culture and clover use.

One of the clovers that has as yet obtained little attention in this country is sweet clover, which grows so abundantly among many of our roadsides.

A farmer tells the writer that he has had some experience in feeding this to cattle, and that they eat it greedily after they have become accustomed to it. He says he has seen his cows leave alfalfa and good blue grass and turn to a patch of sweet clover. They did not, however, always have a liking for it; but the liking seemed to grow after the animals had had frequent opportunities to eat it.

The objection to sweet clover as a food for stock has been a bitter taste very pronounced in it. This is the thing to which animals must become accustomed. But a farmer says that it is the same with human beings eating olives. Also, it is well known that domestic animals raised on the plains and fed on nothing but grass and hay will not at first eat much grain, either whole or ground. They have to become accustomed to the new feed.

If, then, it is merely a question of accustoming animals to sweet clover, we have much to hope for in the coming use of this plant.

It will doubtless prove of more value in the soiling system than in any other way. Making hay from it is not very easy, on account of the size of the stalk, especially when it grows very rank. However, it may be cut several times a season, as is the case with alfalfa.

Where sweet clover was seeded on rich land, which had been prepared for it as for any other crop, the writer saw it standing more than six feet high, and so dense that it made many tons of hay per acre.

Its great value is going to be found in the persistency with which it grows under hard conditions. While alfalfa is easily crowded out by common weeds, sweet clover crowds out the weed, but is itself in time crowded out by grass. It is a great thing to have a good forage plant that delights to grow on the hardest kind of soil and where it has at the surface a small water supply. It will often be found growing on high embankments of railroads, where the water table must surely be far below the surface, showing that this plant has the power of sending its roots far down into the moist strata of soil.

Like alfalfa and red clover, it cannot grow and thrive in an acid soil. But where the soil is permeated with lime the acid is neutralized by the lime and the sweet clover thrives. Some lime is used also in the building up of the tissues of the plant, but that is true of other plants as well. But sweet clover is such a lover of lime that where it is found growing well it is generally considered that lime abounds in the soil.

On farms where it will not grow it should grow by applying to the soil either ground lime rock, air-slaked lime, or water-slaked lime, known as hydrated lime.

Where this plant grows naturally it will be well to experiment with it, feeding to different kinds of stock and see how long it will take for the animals to develop a liking for it.

It will not stand pasturing any more than alfalfa, unless it be pastured very lightly.

Wheat Market Situation.

The dark cloud of an American Congress legislating against our wheat growers and in favor of the foreign wheat grower is depressing the market. Bread is as dear as ever, but the wheat that ought to sell at a dollar a bushel and cost to market added is selling at about 84 cents, out of which market charges and transportation must come. Farmers are raising wheat to sell very little above a cent a pound.

Wheat Market Options at Chicago.

	July.	Sept.	Dec.
May 31st	92¼	91⅞	94⅛
June 30th	89⅛	90	93⅛
July 31st	84⅛	86	89⅞

The figures we present are based upon the close of the market on the closing day of the month.

On May 31st, at St. Louis, the market closed with No. 2 soft red wheat selling at $1.03 to $1.06½ a bushel. On June 30th the sales were at 89 to 91 cents; on July 31st the sales were made at 84 to 85⅜ cents a bushel.

On May 31st, at St. Louis, No. 2 hard wheat sold at 93 to 94 cents a bushel; on June 30th the prices were 89½ to 93 cents, and on July 31st 84 to 84¼ cents. We leave the market as it was then quoted.

Corn Harvesting Simple.

Attention is invited to the card of the New Process Mfg. Co., Salina, Kas., on page 2. For several years this corn harvester has been advertised with considerable success. It is worth investigating.—(Advt.)

We Give You a Suit and Put Money in Your Pockets

Be the best-dressed man in your town at our expense. We do everything for you except spend your money. If you want your own business and a home on "Easy Street," this is your greatest opportunity. We are looking for a man who will take orders. We don't need salesmen. Regal Union Label Garments sell themselves. If you will wear a suit made to YOUR measure—
YOU ARE THE MAN WE WANT!
You can choose any suit we make and have it lined with silk and finished any way you want. Wear it in your spare time, and all of your friends will want to look as stylish and well dressed as you look. Then all you have to do is to take the orders. Every order means a big CASH profit to you, and it all comes to you free. We prepay all express charges. We back you with our enormous union tailoring shops, our advertising and our money.
SEND US A POSTAL NOW
The return mail will bring you the chance of your life. We will send you our handsomely colored, beautifully illustrated book of made-to-measure, union made garments with our complete outfit, tape measure, wonderfully colored fashion plates, confidential and retail price lists, and full information how to get your own suit free and how we put money in your pockets. Write at once. (15)

Disking Timothy and Alfalfa.

A correspondent asks if I advise disking in manure which is spread, during the fall, on old timothy and alfalfa fields.

I do not advise disking timothy at all. It would probably ruin it. I should merely apply the manure from a spreader late this fall, leaving it to work down around the roots during the winter. Disking an old alfalfa field would stimulate growth, providing it was done at the proper time. If manure is applied to the field this fall I should not disk until the alfalfa started next spring. Disking or harrowing alfalfa is all right, and may be done with advantage after any cutting except the last one, and, as the manure would not be applied possibly until after the last cutting, it would be best to not disturb the alfalfa crowns by disking until spring. Some good farmers say better results may be had from harrowing in manure, instead of disking it.—L. C. Brown.

Sowing Timothy After Millet.

A Missouri correspondent asks these questions about timothy: "Would you advise sowing timothy this fall? How would it do to sow timothy after millet?" Timothy may be sown alone in the fall, but it is important that the ground be clean. If the millet can be taken off the ground in September, disking and harrowing would be all that are necessary to put the ground in condition for seeding the timothy. Timothy requires rather moist, rich soil, and unless the ground where the millet is growing is in good condition, I would not chance timothy on it.—L. C. Brown.

Weeds About to Take Alfalfa.

A Kentucky correspondent writes: "Last season I sowed about five acres to alfalfa, my first experience. The alfalfa came on pretty well the first season, but this year it is not thrifty and weeds are about to take it. What can I do with it?"

It is more than likely that the alfalfa was sown on rather thin ground, and possibly was not inoculated. About all one can do now is to thicken up the stand by reseeding and by vigorous use of a spring-tooth harrow keep down the weeds. Sowing alfalfa on poor ground seldom pays. It should be sown on ground which will produce average crops of wheat or oats, and, besides putting the seed-bed in good condition, inoculation and lime are nearly always essential. Many make the mistake of trying to force alfalfa to grow under unnatural conditions.—L. C. Brown.

Sowing Crimson Clover.

A Williamson county, Illinois, correspondent asks if it is too late to sow Crimson clover, and upon what character of soil it will do best.

In Southern Illinois and farther south Crimson clover should be sown during the fall—say along in September. The seed-bed should be well prepared and the seed well covered, for the young plants cannot endure much heat and the roots of the young plants are easily killed. Crimson clover thrives during the cool, moist weather of fall and early spring.

It will thrive on most any character of soil that is not too cold, but really does best on rich loams. It will do tolerably well on sandy soils, but on thin, stiff soils it will not do any better than common red clover.

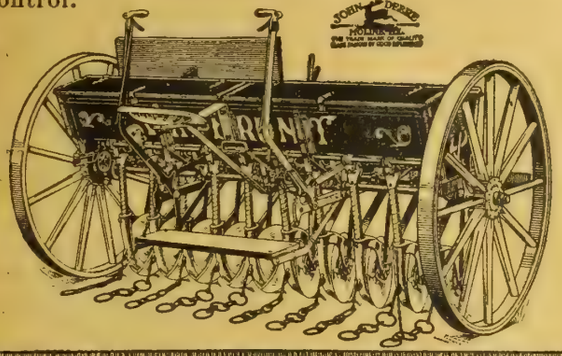
I strongly urge Crimson clover for these southerly regions where common red clover does not thrive. Crimson clover will yield as much hay as common red, and the hay is of good quality.—L. C. Brown.

VAN BRUNT RESULTS

Fertilize as You Plant the Seed

Investigate Van Brunt Drill thoroughly before buying any drill. It has money-making features which you will surely appreciate.

It is different than others you have known, with (1) closed Forward Delivery Disc Boot, (2) Adjustable Gate Feeds, (3) Special Fertilizer Force Feed, all grain and fertilizer distributed at uniform depth with quantities under absolute control.



What to Look Out For

Even Seeding—The Van Brunt adjustable gate feed guarantees an even flow of any kind of seed without bunching or damaging a single kernel.

Correct Planting—Disc openers will not choke or clog in any ground that can be seeded. Seed falls into the furrow when it is wide open; it beats the dirt.

Light Draft—These drills are light weight, but strong. Trussed hoppers, full length axles and wheel bearings extending under frame, make the light-draft drill.

Durability—Disc bearings are guaranteed for the life of the drill. Any that wear out, are replaced free. All parts of Van Brunt Drills show the result of fifty years experience in drill making.

Our new free drill book tells the complete story of Van Brunt superiority. Write and ask for book, No. 7 VB

JOHN DEERE PLOW CO.
MOLINE, ILLINOIS

GOVERNMENT WHEAT REPORT.

Issued on July 9th, But on the Basis of July 1st.

The United States Department of Agriculture issued the following estimate in regard to the wheat crop:

Winter Wheat.—Area planted, 30,938,000 acres, compared with 26,571,000 acres last year; condition, 81.6 per cent. of a normal, compared with 83.5 per cent. on June 1; 73.3 per cent. on July 1, last year, and 79.9 per cent., the ten-year average on July 1; indicated yield, 15.6 bushels per acre, compared with 15.1 bushels last year, and 15.2 bushels, the average for the last five years; estimated total production, 483,000,000 bushels, compared with 399,919,000 bushels last year; 430,656,000 bushels in 1911; 434,142,000 bushels in 1910; and 418,000,000 bushels in 1909.

Spring Wheat. — Area planted, 18,663,000 acres, compared with 19,243,000 acres last year; condition, 73.8 per cent of a normal, compared with 93.5 per cent. on June 1; 89.3 per cent. on July 1, last year, and 85.3 per cent., the ten-year average on July 1; indicated yield, 11.7 bushels per acre, compared with 17.2 bushels last year; and 13.3 bushels, the average for the last five years; estimated total production, 218,000,000 bushels, compared with 330,348,000 bushels last year; 190,682,000 bushels in 1911; 200,979,000 bushels in 1910; and 265,000,000 bushels in 1909.

All Wheat.—Area planted, 49,601,000 acres, compared with 45,814,000 acres last year. Condition, 78.6 per cent. of a normal, compared with 87.2 per cent. on June 1; 80.1 per cent. on July 1, last year, and 81.9 per cent., the ten-year average on July 1. Indicated yield, 14.1 bushels per acre, compared with 15.9 bushels last year, and 14.5 bushels, the average for the last five years. Estimated total production, 701,000,000 bushels, compared with 730,267,000 bushels last year; 621,338,000 bushels in 1911; 635,121,000 bushels in 1910; and 638,000,000 bushels in 1909.

The amount of wheat remaining on farms, July 1, is estimated at about 35,515,000 bushels, compared with 23,876,000 bushels on July 1, 1912, and 34,071,000 bushels on July 1, 1911.

Harvesting Cowpea Hay.

The habits of cowpeas should be known in order to handle them for hay to the best advantage. Some varieties make a decided upright growth, while others trail along the ground and are not suitable for hay. The New Era, Michigan Favorite and Whippoorwill are good varieties to grow for hay, because of their upright habits, which make them easily handled with the ordinary mowing machine.

Handling the crop after it is cut is not difficult, providing the peas are cut at the proper stage. Last fall, in my travels in Southern Illinois, I saw thousands of acres of cowpea hay ruined because it was cut too green. It would not cure. For early and quick handling cowpeas should be cut when the leaves begin to turn. At this stage they will cure as readily as clover hay and will be ready for stack or mow within thirty-six hours. In showery weather it is risky to mow down a large acreage and take chances. It is safer to mow what can be handled promptly. By putting it in cocks after an exposure of eight or ten hours, it will cure nicely and will not be much injured by ordinary rains. With good drying weather cowpea hay mowed in the forenoon may be put into cocks late the same day. The usual practice of raking the hay up into windrows, leaving it there to cure, is all right, providing it does not rain. But this curing process requires three or four days, and there is many a chance for a slip, during haying weather, within that time.—L. C. Brown.

Flax Crop of the United States.

Dated July 1st but issued July 9th the United States Department of Agriculture issued the following report on the flax crop of 1913:

Area planted, 2,245,000 acres, compared with 2,851,000 acres last year. Condition, 82 per cent. of a normal, compared with 88.9 per cent. last year, and 87.2 per cent., the ten-year average on July 1. Indicated yield, 8.7 bushels per acre, compared with 9.8 bushels last year, and 8.2 bushels, the average for the last five years. Estimated total production, 21,000,000 bushels, compared with 28,073,000 bushels last year; 19,370,000 bushels in 1911; 12,718,000 bushels in 1910; and 20,000,000 bushels in 1909.

The National Dairy Show for 1913 will be held at Chicago, as usual, commencing with Thursday, October 23d, and ending Saturday, November 1st, 1913.

The Spalding Deep-Tilling Machine

is doing wonderful work all around you, preparing a 12 to 16-inch deep, thoroughly pulverized and mixed seed-bed, in one operation. Such a seed-bed cannot help but increase crops. AND IT DOES.

Ask for reports from farmers in your neighborhood. We will send them to you, together with catalog and other information.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

Congress is still in session, and the bill that is to discriminate against all American industries and against the farming interests in particular, is still in the Senate; therefore we again publish the editorial views of The National Farmer and Stock Grower on that subject.

We are in favor of the United States Custom House collecting by law a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, the amount of said duties to applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government can be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people. We are in favor of duties being levied upon all manufactured goods for the double purpose of furnishing revenue and for the protection of our manufactures, for the reason that all interests are entitled to protection, if it is accorded to anyone.

We look with seriousness at what we regard as a great and unnecessary blow to the best-producing industries of this country in the tariff bill that has just passed the House. This country has had some experience in that line. Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result.

With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year; and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty displace home productions and result in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his suppoft in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives far better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and general discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers. The farmers who can provide for themselves will be slow to increase their products in the face of injurious legislation.

United States Tobacco Crop.

Basis of July 1st, 1913, the United States government issued the following in regard to tobacco:

Area planted, 1,144,350 acres, compared with 1,225,800 acres last year. Condition, 82.8 per cent. of a normal, compared with 87.7 per cent. last year, and 84.8 per cent., the ten-year average on July 1. Indicated yield, 809 pounds per acre, compared with 785.5 pounds last year, and 822.3 pounds, the average for the last five years. Estimated total production, 926,000,000 pounds, compared with 962,855,000 pounds last year; 905,109,000 pounds in 1911; 1,103,415,000 pounds in 1910; and 1,056,000,000 pounds in 1909.

Government Report on Rye.

Based on July 1st, the United States Department of Agriculture issued the following estimate in regard to the rye crop:

Condition, 88.6 per cent. of a normal, compared with 90.9 per cent. on June 1; 88.2 per cent. on July 1, last year, and 89.7 per cent., the ten-year average on July 1. Indicated yield, 16.1 bushels per acre, compared with 16.8 bushels last year, and 16.2 bushels, the average for the last five years.

Sowing Clover on Thin Places.

A Missouri correspondent asks if it would be any use to sow clover on the thin places on stubble where the spring seeding of clover failed to catch.

Yes, I advise sowing these areas at once. Most clover fields where spring seeding was done with grain show a good many of these burnt-out areas, and it is important that they be covered at once. The ground should be put in fit seed-bed condition, and then, if seeding is done by the middle of August, there are good chances of success.

Another correspondent, who reports that his early spring-sown clover is a failure, asks if I advise sowing clover during the fall on stubble ground.

Clover may be sown early in the fall. I should disk and harrow the ground at once and put it in good condition, and then after a good rain I should sow the seed and harrow it in well. Because of unfavorable conditions, both early in the spring and in June, large areas of clover are partial failures. These should be looked after right now.—L.C. Brown.

Clipping Clover For Seed.

A Union county, Illinois, correspondent writes: "I have some two-year-old clover which I am saving for a seed crop. I was advised to clip it two or three times, and have already clipped it twice. Had I best leave it alone now?"

If this correspondent had stated whether his clover was Medium Red or Mammoth I could have given his inquiries more definite answers. If the clover is Common Red, our correspondent has not done wisely in clipping it back twice. The usual practice is to take a hay crop early and then leave the second crop to mature seed. With Mammoth clover, if the growth is very rank, it may be advisable to clip twice. On thin ground I do not advise clipping at all. In Minnesota, where perhaps more Mammoth clover is grown than in any other section, they do not clip at all, and not unfrequently the clover yield is three to four bushels per acre.—L. C. Brown.

Government Potato Report.

On July 1st, in regard to white potatoes, the Department of Agriculture reported as follows:

Area planted, 3,685,000 acres, compared with 3,711,000 acres last year. Condition, 86.2 per cent. of a normal, compared with 88.9 per cent., the ten-year average, on July 1. Indicated yield, 93.1 bushels per acre, compared with 113.4 bushels last year, and 96.1 bushels, the average for the last five years. Estimated total production, 343,000,000 bushels, compared with 420,647,000 bushels last year; 292,737,000 bushels in 1911; 349,032,000 bushels in 1910; and 389,000,000 bushels in 1909.

FARM MECHANICS.

Adding an Extra Month to the Farmer's Working Year—How the Gasoline Engine Does It.

[By Ed. H. Witte.]

Out on my farm the work divides itself roughly into three classes—the housework (under the direction of my wife), the yard work and the field work, under my direction. Some of the yard work runs over into the house work and the field work, and some of the field and house work run into the yard work.

The gasoline engine has as much place in the yard work, and in some of the house work, as the horses and mules have a place in the field work.

As yard work, there is what is usually called "chores," morning, noon and evening. And besides the chores there is much more or less regular work, as feed grinding, corn shelling, wood sawing, grain elevating, tool grinding, water pumping, and some shop machinery to drive for repair or building work. In some places the milking machine has come to have a regular call for machine power.

Everybody knows about the "chores" of house work—the cooking, dish washing, scrubbing, bed making, lamp tending, etc.—and the usual additional chores of separating milk and feeding and looking after the chickens. These two latter are yard work that gets over into the house work by a sort of common consent, the beginning of which no one exactly knows.

The up-to-date farm has a power house, or should have such a thing. The power house will, on the average farm, add at least an extra month of productive working time to the calendar year. It does not take much use of a four or six horse-power gasoline engine to save an hour a day for 365 days a year. That is 365 hours, which at twelve working hours a day makes thirty days, or a month. This month's time taken out of yard and house chore time and added to the productive time in the field—where neither sun nor season waits for any man—and to the woman's disenthrallment from house slavery to home making, this month's time I estimate to be worth to the average farm every year several times the cost of the farm power house and its equipment. Quite often the work done in and by the power house saves a farm hand, who for eight months in a year costs $400 to $500, and is not always satisfactory at that.

Out in the power house on my farm we make electric lights for our house, besides for the barn, stable, garage, granary, poultry houses and other buildings into which we have to go or look, now and then, at night. We also have some yard lights. All this does away with lamp trimming, cleaning and filling, besides the danger and usual mussiness of the old kerosene lamps. We have instantaneous light, day or night, and for the hot days we have electric fan service, while the daily chore of sweeping and dusting is much shortened and greatly lightened by the electric suction cleaner. The sewing machine is power driven, and so are the washing machine and wringer. All this work requires only one-day's run of the small engine a week. The storage batteries do the trick the rest of the time.

When the engine is making electricity, just to keep it decently busy we have it pump water into an under-ground, air-pressure water tank, which supplies a water service to house, barns and stock tanks that is the equal of any city service. This pressure water service operates the bath and toilet and makes lawn sprinkling and garden watering a delight instead of a drudgery. Another point of first importance to every farmer is in favor of the gasoline engine pumping into an air-pressure tank of considerable capacity. That is the matter of fire protection. Some time ago a fire broke out among the buildings of a large ranch, and when the owner with his neighbors and employees undertook to get water to fight the flames and protect surrounding buildings, it was discovered there were not enough buckets to do any good to get water from the open stock tanks to the fire. So the fire burned out its course, causing great loss. An air-pressure system, with gasoline engine, pump and some small rubber hose would have saved thousands of dollars that night, where the water system would have cost only a few hundred. Of course, it was easy for this ranch owner to go to town the next day and buy just such an outfit; "to lock the barn door after the horse had been stolen." The time is coming, however, when the insurance companies writing farm insurance will require such a water installation in order to get the most advantageous insurance rates. It is a noteworthy fact now that farmers are having to pay too high insurance rates.

The same gasoline power runs the cream separator and the churn, and I suppose one of these days it will do the milking. Our land near Kansas City is so high-priced that dairying is necessary to make it pay for owning it. If our little power house did nothing else but lighten, as it does, the women's work in the house, it would still be worth many times its cost. It has not cost in the first place what I have had to pay for a single work team, and its working capacity will not be seriously lessened any when every horse I now own will be dead from old age.

So much for the gasoline engine as a capable assistant to the mistress of the house.

For its part in the yard work, and through that to the field work the engine has much more to do.

In the way of heavy work it has the feed grinder to run as a rather regular thing. Also water to pump for stock watering, and more and more than ever for irrigation purposes. In season it has to saw wood, cut ensilage, run the grindstone (especially for grinding mower sickles), run the fanning mill, turn the shop forge fan, elevate and dump grain—small grain as well as corn—bale hay and sometimes pull stumps. It also has the corn to shell and plow and disc shares to polish and grind. In many localities the matter of wood sawing alone makes it of big profit to own a gasoline saw rig. Hundreds of owners of such rigs have written to say that their custom sawing alone in a single season of a few months in the winter had paid entirely for the saw rig, besides paying all expenses of operation. Such a saw rig can now be had for about half what used to be considered a low price. Not only is such a rig good for sawing, but for other work as well. Where the saw table can be detached and some other machine, such as an ensilage cutter, feed grinder or pump put on the same frame, the range of usefulness and earning capacity can be greatly widened. Doing these things, the gasoline engine adds to a farmer's capacity for greater accomplishment while at the same time it lessens his work. In other words, it makes his day longer, but leaves him less tired at night.

The gasoline engine is the greatest invention of all the ages for taking the hard work out of the day's duties and at the same time greatly increasing the output of the year's labor while lowering the cost of production. Far from reducing the need for horses and mules, the gasoline engine increases the need for more work animals, because for every hour and every day it releases of a farmer's time from the yard to the field just that much more will the farmer come to need more field power, either to increase his acreage under plow or to cultivate better the acres which before had to be "mined" instead of farmed.

Contrary to the belief of many, the present-day gasoline engine is a very simple machine. Much simpler, indeed, and more readily to be understood than a self-binder or a common sewing machine. The time was when in the early days the gasoline engine had to be equipped with the "hot-tube" igniters, something which now-a-days is almost unheard of. That method of ignition left a degree of uncertainty in the operation of the engine, which at times was very annoying. But all that is changed now. Over twenty years ago, when I perfected my first electric igniter, I could see where the gasoline engine, on account of its improved ignition device, would come to be the most versatile servant of the farmer. And the years since have borne out my belief. The electric igniter took away from gasoline engines their vagaries and their uncertainties, also their danger. Every man, or woman either, for that matter, who can read the language of ordinary farm speech, can now master all the operation of a gasoline engine easily, if only he or she will study for a few hours the instruction book furnished with each machine. Nothing that can be learned in such a comparatively short time is more worth knowing than to know how a gasoline engine runs, how it can be kept going and how to use its power when it is going. Every boy has to learn how to drive horses, how to handle them to avoid undue risk of disease and accident, not only to the horses but to himself. It is easier to learn how to manage a gasoline engine. I don't say this to convey the impression that it is better to know how to manage an engine than a span of horses or mules, but merely to point that the one is really easier than the other, and the up-to-date farmer needs to know both.

The farmer who to-day is getting along without a first-class, really high-grade gasoline engine is paying more to do without it than it would cost to have it. This is a proposition that courts investigation, and I believe that engine manufacturers and engine users everywhere, as well as agricultural college authorities, will be found ready, willing and capable to successfully demonstrate its soundness, just as I believe that every fair-minded farmer who is not now using such an engine will admit the truth of the same proposition after he takes the time and pains to make a worth-while investigation.

Illinois Butter Scoring.

The wide variation in creamery buttermaking is clearly shown by the June Butter-scoring Exposition at Urbana, Ill. There were seventeen entries. The scoring ranged from 86 to 95, and the average was 90.56. The analyses of the entries showed extreme variations in composition. One entry contained but 9.84 per cent. moisture, while three entries went over the legal limit of 16 per cent. The average moisture content of the seventeen entries was 14.36 per cent. The salt content varied from .56 per cent. to 3.62 per cent. There was only one entry criticised as being briny. Five entries contained less than 2 per cent. of salt, and there were four that contained over 3.5 per cent. The average salt content for the seventeen entries was 2.51 per cent. The curd content was slightly variable, the lowest curd content being .58 per cent., the highest .93 per cent., while the average for the seventeen entries was .77 per cent.

Holstein-Friesian Register.

During the period from May 2d to May 23d, 1913, records for 255 cows were accepted to entry in the Holstein-Friesian Advanced Register. This selection of 255 animals, of which over one-half were heifers with first or second calves, produced in seven consecutive days **104,512.7** pounds of milk, containing **3,730.145** pounds of butter-fat, thus showing an average of **3.57** per cent. fat. The average production for each animal was **409.9** pounds of milk, containing **14.628** pounds of butter-fat, equivalent to **58.56** pounds or **27.9** quarts of milk per day, and **17.06** pounds of commercial butter per week.

Fifty Pounds of Butter-fat a Month.

To produce fifty pounds in a month is not a big yield, as we consider production in our best dairies to-day. When produced in the regular course of a cow's yearly work and compared with the average of the herd it looks large to us, and when compared with the average yield of cows throughout the country it looks still larger to us.

It is really an honor to be in the fifty-pound class. Among those who have come to the front in the past week we note two from Langwater Farms — Langwater Dolly Bloom, 22,136, with 59.18 pounds, and Langwater Dorothy, 27,944, with 67.10 pounds, both owned by F. Lothrop Ames, North Easton, Mass. Mignonette of Maple Row, 27,265, owned by Est. H. E. Taber, Castile, N. Y., produced in May 80.22 pounds butter-fat, and in June 64.60 pounds. Capt. E. B. Cassatt, of Berwyn, Pa., has two cows that are running very close together, May Rilma, 22,761, giving 79.08 pounds butter-fat, and Nellie Eglantine, 22,759, giving 79.97 pounds butter-fat. Bessie Villanette, 32,891, in the same herd, gave 54.63 pounds butter-fat. Imp. Nellie, III., of the Baissieres, 39,644, owned by J. Henry Hammond, of Mt. Kisco, N. Y., was just comfortably over the line with 51.84 pounds. From Michigan, W. T. Barbour, of Birmingham, has two cows—Imp. Les Pelleys Jane, II., 32,038, with 55.63 pounds for May and 50.22 pounds for June; and Bess of Locust Grove, 28,886, who gave 65.50 pound in May and 59.53 pounds in June.

While other Guernsey cows are doing as well, the above are representative of those in the states mentioned and should encourage breeders generally to know just what their cows are actually producing.

Seventeen Guernsey cows were granted certificates the past week. Seven gave over 500 pounds butter-fat, and an average of 599 plus pounds for the year; and only three out of the seventeen, and they being young animals, gave less than 400 pounds. Nine of the number are owned by O. C. Barber, of Akron, Ohio, and averaged 483.39 pounds, only one giving less than 400 pounds, while one gave 636.12 pounds butter-fat as a four-and-one-half-year-old.

The largest record for the week is that of Miranda of Mapleton, 19,606, owned by F. G. Benham, of Canandaigua, N. Y. This cow has just completed her fourth yearly record and gave 16,630.70 pounds milk and 927.16 pounds butter-fat, which gives her second place among Guernsey cows for yearly work. While other Guernseys have made four-yearly records, Miranda has outdistanced them all in the total amount of milk and butter-fat.—American Guernsey Cattle Club Notes.

Gross and Net Farm Profits.

According to a statement emanating from Prof. Wm. J. Spillman, Chief of the Office of Farm Management, Department of Agriculture, the gross income of the average American farm is $980.55, and the gross expense $340.15, leaving a net income of $640.40.

Of the net income $322.18 represents the interest on the investment, and $318.22 the value of the farmer's labor for the year.

The total gross income of the 6,361,502 farms of the country in 1910 was $6,237,850,146. The total expenses were $2,163,822,647, leaving a net farm income of $4,074,027,499. The interest on investment figured at 5 per cent. comprised $2,049,572,454 of the net income and the labor income $2,024,455,045.

It requires the net profits of ten farmers to pay the salary of one Congressman.

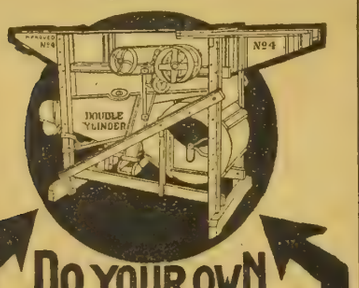
The United States Barley Crop.

Issued on July 9th and based upon information collected July 1st the United States Department of Agriculture makes the following statement in regard to the barley crop:

Area planted, 7,255,000 acres, compared with 7,530,000 acres last year. Condition, 76.6 per cent. of a normal, compared with 87.1 per cent. on June 1; 88.3 per cent. on July 1, last year, and 85.4 per cent., the ten-year average on July 1. Indicated yield, 22.8 bushels per acre, compared with 29.7 bushels last year, and 24.5 bushels, the average for the last five years. Estimated total production, 165,000,000 bushels, compared with 223,824,000 bushels last year; 160,240,000 bushels in 1911; 173,832,000 bushels in 1910; and 173,000,000 bushels in 1909.



DO YOUR OWN THRESHING

of beans and peas with a guaranteed Owens Thresher. All your seed separated and cleaned from the vines and pods without splitting. Pea and bean growing is the most profitable farming if handled right.

OWENS DOUBLE CYLINDER
Bean and Pea Thresher
—Made in 4 sizes—

Will pay for itself many times over in one season. Guaranteed not to split the seed and take all from the vines.

Government Oats Report.

Issued on July 9th from calculations based upon reports of July 1st, the United States Department of Agriculture issued the following estimate in regard to the oats crop:

Area planted, 38,341,000 acres, compared with 37,917,000 acres last year. Condition, 76.3 per cent. of a normal, compared with 87.0 per cent. on June 1; 89.2 per cent. on July 1, 1912; and 84.5 per cent., the ten-year average on July 1. Indicated yield, 26.9 bushels, compared with 37.4 bushels last year, and 29.7 bushels, the average for the last five years. Estimated total production, 1,031,000,000 bushels, compared with 1,418,337,000 bushels last year; 922,298,000 bushels in 1911; 1,186,341,000 bushels in 1910; and 1,007,000,000 bushels in 1909.

The Government Corn Report.

Issued on July 9th but calculated on basis of July 1st, the United States Department of Agriculture issued the following estimate in regard to the corn crop:

Area planted, 106,884,000 acres, compared with 107,003,000 acres last year. Condition, 86.9 per cent. of a normal, compared with 81.5 per cent. on July 1, last year, and 84.0 per cent., the ten-year average on July 1. Indicated yield, 27.8 bushels per acre, compared with 29.2 bushels last year, and 26.5 bushels, the average for the last five years. Estimated total production, 2,971,000,000 bushels, compared with 3,124,746,000 bushels last year; 2,531,488,000 bushels in 1911; 2,886,260 bushels in 1910; and 2,552,000,000 bushels in 1909.

Our Crop of Rice.

The United States Department of Agriculture issued a report on the rice crop, basis of July 1st, 1913:

Area planted, 824,100 acres, compared with 722,800 acres last year. Condition, 88.4 per cent. of a normal, compared with 86.3 per cent. last year, and 88.5 per cent., the ten-year average on July 1. Indicated yield, 33 bushels per acre, compared with 34.7 bushels last year, and 33.7 bushels, the average for the last five years. Estimated total production, 27,000,000 bushels, compared with 25,054,000 bushels last year; 22,934,000 bushels in 1911; 24,510,000 bushels in 1910; and 22,000,000 bushels in 1909.

Hay Condition, July 1, 1913.

The United States Department of Agriculture report on hay was as follows: Condition, 80.5 per cent. of a normal, compared with 87.5 per cent. on June 1; 85.2 per cent. on July 1, last year, and 82.2 per cent., the average for the last five years Indicated yield, 1.33 tons per acre, compared with 1.47 tons last year, and 1.38 tons, the average for the last five years.

Genuine Blue Grass—Poa Pratensis.

(By Chas. E. Prunty, Grain, Clover and Grass Seeds, 7, 9 and 11 South Main Street, St. Louis, Mo.)

This winter grass ripens here in Missouri about June 15th. If the seed is not harvested during the next few days it may be shed by the first shower of rain. It is gathered by using a two-horse cylinder harvester, which combs the seed off the stems. On account of the heat of the weather and the sultriness of the air during June, the few green stems which are gathered with the seed commence to ferment and would heat in twelve hours if the rough seed is not carefully spread on sheets and cured. The purifying of the seed is done later in factories with several different machines. The yield per acre of purified seed averages about fifty-six pounds. The seed of this plant, Poa Pratensis, is known locally by different names, such as Kentucky Blue Grass and Stalk Meadow Grass. The seed of the Poa Compressa, which is from Canada, and other inferior Poas are often mistaken for the Poa Pratensis seed.

The seeds of Poa Pratensis, if scattered on the firm surface of congenial and well-drained and composted soil during the months of August and September and trodden in (rolling is not so effective) will send its roots in the course of a few years to a depth of ten feet and form a close sod, which will withstand drouth and cold weather better than some trees.

Irrigation.—Wetting a blue grass sod during warm weather, when the plant is dormant, promotes the growth of summer grass and weeds River water carries the germs of seeds in suspension. The dampness breeds worms which feed on the blue grass roots.—(Advt.)

"THIS IS A GOOD ONE."

Northville, Mich., March 27, 1913.
Binkley Medical Co., Nappanee, Ind.:

Gentlemen:—I enclose check for $1.00 for one more bottle of Frazier's Distemper Cure, as I did great things with the other bottle I received. I have a colt that I have had five different veterinary surgeons caring for since last November and none of them did him any good, and I also tried one bottle of S..... Distemper Remedy and I could not see any change. The first bottle of "Frazier's" used on this colt, we noticed a change for the better right away. I am sure that "Frazier's" has got it on all of them. Would not be without it again. Rush bottle right away. Respectfully, H. A. Thomas, Proprietor Thomas Tavern. (Advt.)

MISBRANDING OF ZENOLEUM.

Under insecticide act of 1910 seven cases of zenoleum shipped by the Zenner Disinfectant Company, of Detroit, Mich., were condemned by the government for being misbranded. The company made no defense, and a default was entered and the goods were destroyed. The case was before the District Court of the United States, December 10th, 1912.

FRAZIER'S DISTEMPER CURE

Coughs and Distemper

Among Colts, Mares and Stallions cured with one bottle of **FRAZIER'S DISTEMPER CURE**, or your money refunded. One dose placed in trough or feed will prevent all cases. Influenza, Pink-Eye, Catarrhal Fever, Colds and all forms of Nose and Throat Troubles cured in four to eight days. $1 bottle holds three 50c. size bottles. Send postal for free booklet on the horse. Sold by druggists or prepaid from

BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

STOCKMEN AND THE TARIFF.

Official Statement by the American National Live Stock Association.

The following statement by the American National Live Stock Association was dated at Denver, Colo., July 22d:

"During April and May, 1913, this association was ably represented in Washington by a committee of stockmen from various sections of the West, who went there for the purpose of urging Congress to retain a fair and reasonable duty on live stock and meat-food products. The tariff bill, as it passed the House of Representatives, placed meat products on the free list and imposed a duty of 10 per cent. on live stock. This was thoroughly illogical, and we insisted on the same treatment for both live stock and meats, and urged that the duty be not less than 15 per cent. ad valorem. In addition to the brief filed before the Ways and Means Committee on January 21, 1913, a supplemental brief was presented to the Finance Committee on May 5, 1913. Later, on May 9, the Sub-committee of the Finance Committee handling Schedule G (live stock and meats) granted a hearing to our representatives, at which the matter of an adequate inspection of all imported live stock and meats, as well as the duty on our products, was fully presented. On the request of said Subcommittee, an amendment covering the inspection of imported meats, and providing for substantially the same inspection as prevails in this country, was prepared and submitted.

"At a still later date, namely, June 25, 1913, an additional brief was filed with the Finance Committee for this association, insisting that the tariff law should carry a countervailing duty clause, under the operation of which there would be assessed by this country, for example, on all imported live stock and meat products from Canada, a duty equal to the amount levied by Canada on similar products from this country. We contended that it would be unreasonable, and unfair to the American producers, as well as a dangerous economic policy, to open free the markets of this, the greatest meat-producing and consuming country in the world, without a corresponding opportunity to sell our surplus of meats on equal terms in the markets of countries which may sell to us. Such a countervailing duty clause would result in a duty on all live stock and meats imported from surplus countries, such as Canada, Argentine, Australia and Mexico.

Notwithstanding all our efforts, the Sub-committee of the Finance Committee recommended that both live stock and meats be placed on the free list, and the Finance Committee so reported. It now seems practically certain that no countervailing clause applying to live stock will be inserted in the tariff bill. We are, however, reasonably assured that the bill will be amended to provide for an inspection of meats and live stock, so as to prevent to entry of contagious diseases into this country. Whether such inspection at points of slaughter abroad will be as rigid as is maintained on our domestic production cannot now be foretold.

"Everything that could be done to protect our interests in the tariff has been done by the officers of this association and the stockmen who went to Washington. At a time when an import duty on live stock, meats and agricultural products might mean something to the producer, the majority of the members of Congress favor placing them on the free list. What effect this will have on prices for our live stock is most difficult to forecast. Under the present acute world shortage it may not have much, if any, effect on home prices for the immediate future. It is almost certain, however, that with meats on a free-trade basis, there will be increasing importations in this country, and should our home production enlarge (as it will under the stimulus of present prices) the effect later on will be more marked. Unquestionably the live stock and agricultural interests will be the main sufferers from the pending tariff bill."

Argentine Feeding Africa.

United States Consul Nathaniel B. Stewart at Durban, Natal, South Africa, reports to the Department of Commerce that in consequence of the South African shortage, caused by the drouth of the latter part of 1912, there were imports at Durban of 7,367 tons of corn from Argentine during the period from January to April, 1913. Of the imports, 1,480 tons (2,000 pounds per ton) were white and 5,887 tons yellow corn.

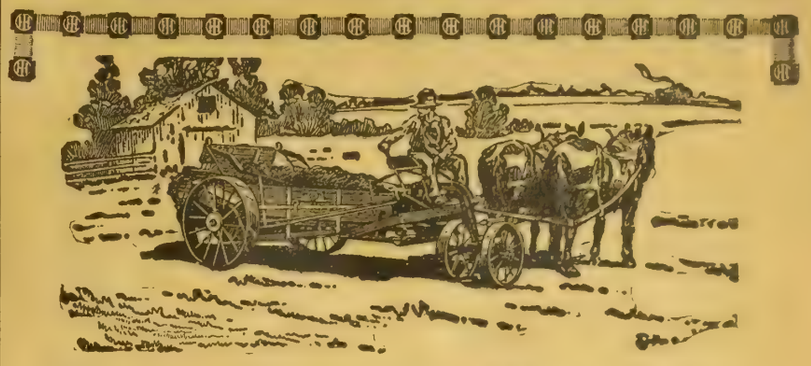
The price at which this grain was laid down in Durban is not known. The greater part of the white was reserved by the local importers for milling, only small quantities being sold at about £1 6d. ($4.99) per bag of 200 pounds. The yellow was disposed of at an average of about 16s. 6d. ($4.02). All of the Argentine crop was kiln-dried and arrived in good condition, it is said.

In addition to the imports at Durban, it is known that 7,270 tons of Argentine yellow corn were imported at Lourenco Marques in January and 4,715 tons at Beira in the early part of April. That imported at Lourenco Marques was for the Mozambique Province, while that at Beira was for Rhodesia. Reports are that the Mozambique natives would not eat the yellow corn, and that in consequence a considerable portion of the importation intended for them had to be reshipped to Europe. There was a considerable loss as a result of this, which it is reported has been borne by the Mozambique government, since it was instrumental in ordering the grain.

Pea and Bean Threshing.

The crop of peas and beans is far less than the demand for them; consequently prices are good and will continue to be good until the supply again exceeds the demand, which is not likely to happen for many years. Peas and beans are legumes and the stubble turned under enriches the land.

J. L. Owens Company, whose advertisement will be found on page 6, are manufacturers of pea and bean threshers which are made in four sizes. In furnishing instructions for harvesting peas and beans, that firm has also included a carefully-prepared article on pea and bean culture which has greater value to the farmer than any other book or pamphlet on the subject. Many an unprofitable farm has been brought into profitable production by turning under the stubble and selling the beans and the hay of the cowpeas and navy beans. Write to J. L. Owens Company, Chamber of Commerce Bldg., Minneapolis, Minn., and mention this paper, then ask for "Free Book on Pea and Bean Culture," and you will receive something worth having and studying.



Ranked at the Very Top

DAVID RANKIN was a big farmer and he knew his business. He owned the largest corn farm in the world, about 35,000 acres down in Missouri. He devoted his life to the pleasant study and practice of right farming, and he succeeded mightily, for he made $4,000,000 in the business of farming. This is what David Rankin said about the manure spreader: "It is the most efficient money-maker on the place."

It's warm praise to be ranked above all other farm machines, but it is in keeping with what all the agricultural world has been recognizing. Soils rebel when crop after crop is taken from them, without return of fertilizer. Witness the abandoned worn-out farms of New England. Return every bit of manure to the soil by the spreader method. The I H C manure spreader will save you much disagreeable, hard labor, will spread evenly, and will make one ton of manure go as far as two tons spread by hand.

I H C Manure Spreaders

are built to suit you, to do best work for the buyer in every case, to convince him that he has made the wisest purchase. Every detail in the construction has a purpose, for which it was made after thorough tests and experiment. They have the maximum of strength and endurance, and their construction bristles with advantages.

You will find all styles and sizes in the I H C spreader line. They will cover the ground with a light or heavy coat, as you choose, but always evenly, up hill or down. There are high and low machines, with steel frames, endless or reverse aprons, but always giving best possible service. Tractive power is assured by position of the rear wheels well under the box, carrying nearly three-fourths of the load, and by wide-rimmed wheels with Z-shaped lugs.

These and many other things will interest you if you look the I H C spreader line over at the local dealer's and will convince you that an I H C is the spreader for you to buy. There is one for your exact needs. Read the catalogues that the dealer has for you.

International Harvester Company of America
(Incorporated)
Chicago U S A

Fertilize as You Sow the Seed.

On page 3 will be found the advertisement of the Van Brunt Drill, which is quite attractively set forth. The intention of the advertisement is to interest you so that you will be prompt in sending for further information. If you write to the good, old, reliable John Deere Plow Company, Moline, Ill., and ask for Book 7 VB, you will receive by return mail the entire illustrated story of Van Brunt results.

FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS.

This is not a directory of farmers and shippers, but it is a directory for the use of farmers and to shippers of farm products.

It is not altogether a new publication, but it is appearing under a new name that fully explains what it really is.

Farmers and shippers have need of a directory that will contain the names and addresses of all the seed houses, of all the fruit and ornamental nurseries, of all the live stock trade, of all the produce commission firms, of all the agricultural implement manufacturers, and all other classes of people that deal with farmers and handlers of farm products.

The Hale Publishing Co. is publishing such a book. The next edition will be dated October 1st, but it will be mailed to subscribers in September. Read about it on page 16.

Many a man who seems dead to the world is only buried in thought.—Ex.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St. Louis. The announcement is made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale rings were originally well-bred Range Horses. The next three Auctions will be held on

Thursday, August 7,

Thursday, August 21,

—and—

Thursday, Sept. 4, 1913,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is good, especially for well-bred Mares and Geldings in fine condition.

Please address

GRAND CHEMICAL CO., Dept. C, 1426 So. Grand Ave., ST. LOUIS, MO.

The St. Louis Mule Market.

Messrs. Holland, Nugent & Maxwell Bros., at the St. Louis National Stock Yards, reported as follows towards the end of July:

"The mule market is good for this time of year on big mules or miners, work mules or pitters; when we say pitters we mean small mine mules. Cotton mules are not wanted. Thin three-year-old small mules that have no class, that people do not want at any price at all, we would advise you to leave in the country. The mules to buy are chunks, draft mules, pitters or mine mules. They are all right, selling as good as they ever have sold this time of year." The firm referred to sell large numbers of mules on the market, therefore their views are doubly interesting.

Western Range Horses.

The auction sales of Western range horses at the St. Louis National Stock Yards continue to give satisfaction. Sales will be held August 7th, August 21st, and September 4th. At the last sale one thousand head were sold. There is an active demand and the offerings sell on their merits. For buyers there are all kinds of opportunities. For instance, at the last sale three car-loads of thin to fair mares and geldings sold one after the other at $21.50, $28.50 and $38.00, and each load sold in line with actual values; another better load of nice, growthy, two-year-old mares sold at $62.00, and a load of two to four-year-old geldings sold at $98.00 per head. Pairs of mules three and four years old sold up to $225.00. The sales are conducted by Campbell & Reid and Western Sale Stables Company, National Stock Yards, Ill.

Deep Tilling and Drouth.

If dry-farming methods were applied all over the United States the crops would surely be larger, and the foundation of dry farming is deep tillage. Deep tillage used to be done by two operations, whereas to-day it requires but one, and that one operation prepares a seed-bed that holds the moisture twelve to sixteen inches deep. On many farms the subsoil has never contributed anything towards growing the crops. To such places deep tilling is like finding a new farm. Write to Spaulding Department 88, Gale Mfg. Co., Albion, Mich., for catalogue of deep-tilling machines.

A Gain For Rumely's.

Mr. M. R. D. Owings has been elected to be Director and Vice-President of the M. Rumely Company of La Porte, Ind., in special charge of the credit and collection department of the business. Mr. Owings has been allied to the agricultural implement business all his active career, and in order to join the Rumely Company he resigned a high position in the International Harvester Company.

In his new position as Vice-President of the Rumely Company, Mr. Owings will bring to his work an accumulated experience as an organizer on a large scale, as a trained advertiser, and as a credit and collection man of long and successful experience. His training in all departments of the implement business will be of especial benefit in his new field.

Fertilizers For Wheat Growers.

The interesting advertisement of the German Kali Works on page 2 is worth reading and worth studying. As previously stated in this paper, the whole subject of fertilization is up to the farmer, who must gain some knowledge by his own experience. Write to the German Kali Works at the nearest office mentioned in the advertisement, and ask for the "Free Booklet on Fall Fertilizers." It contains facts concerning potash that they sell and other fertilizing material that they do not sell.

Oats Market Situation.

The month of July did nothing on the Chicago Board of Trade for the grower of oats. We quote the closing day of the Chicago options for three months:

Chicago Oats Options, 1913.

	July.	Sept.	Dec.
May 31st	39	38⅝	39⅛
June 30th	41	42⅜	43⅞
July 31st	39½	40¾	43

These Board of Trade quotations indicate the past, present and the future. The July quotation has expired and represents the past. The September quotation is the living present and the December quotation represents the future. Future trading in oats is just as legitimate as the trade in straw hats. Drummers are soon going out to sell straw hats for next March delivery.

Cash oats at St. Louis, May 31st, sold at 37½ cents; June 30th at 40 to 41 cents; and on July 31st at 39½ to 41¼ cents per bushel. Last July 30th, cash oats were selling at 35½ to 38 cents a bushel.

Corn Market Situation.

When you get down to market figures, all things have been considered. Figures express the market conditions backed by cash. The quotations are constructed upon actual transactions.

Corn Market Options, Chicago, 1913.

	July.	Sept.	Dec.
May 31st	57½	58¼	56⅝
June 30th	60¾	62⅜	59½
July 31st	69¼	66	63

There are the options as quoted on the dates mentioned. Our first end of the month quotation for May was at 52¼ cents. The report is written July 31st, after the close of the market.

On May 31st, St. Louis basis, cash corn sold at 58¼ cents a bushel; June 30th at 62½ to 63 cents a bushel; and on July 31st No. 2 cash corn was selling at St. Louis at 67½ cents a bushel.

Fertilizer Field Tests.

On page 6 will be found diagrams in the form of an advertisement showing the value of commercial fertilizer as applied to crops of winter wheat. These diagrams are well supported by bulletins which will be sent to all farmers upon application to the Middle West Soil Improvement Committee, 916 Postal Telegraph Building, Chicago, Ill. The committee does not sell fertilizers but represents the fertilizer interests in careful examination of all experiments that show results. All the literature this committee sends out can be relied upon. Please mention The National Farmer and Stock Grower when you write.

Barbed-wire Fencing.

The barbed wire advertised by A. J. Child & Sons, 517 North Main street, St. Louis, Mo., on page 7 was under water a few days in a flood, otherwise it is first-class, new wire. Three thousand reels have been sold and delivered without a single complaint. An opportunity to fence well and cheaply should not be neglected.

YOUNG, P. D. F., 108 Temple St., Springfield, Mass.**

SPAVAPLI

A real absorbant blister. Put on like paint. One application lasts a month—a second seldom needed. For the reduction of all hard or soft enlargements. Price, $1.00 per ounce, enough for two applications. **TAMPA VETERINARY INFIRMARY, 1113 Florida Ave., Tampa, Fla.**

At a sale of farm stock held at Warrensburg, Mo., a team of mules sold at $550, and work horses and mules to the amount of $25,000 were sold in one day.

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You A Cent If The Two Months Test Doesn't Prove All Our Claims

You can make a thorough 60 day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drug-stores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—CluthCo., 125 E. 23rd St., New York City

Southern Cattle Moving.

A considerable number of cattle are being moved from Florida and Southern Georgia by ranchmen, cattle feeders and packers, and in time of need the South is doing as it has done before in making good some of the shortages that have developed elsewhere. Some men have reflected upon the quality and condition of these cattle, but the old-time cattle men know they are better than were formerly raised in Eastern Texas, better than the old-time run from Arkansas, and nearly as good as the original cattle from Southwest Missouri. The South is destined to become the breeding ground of high-grade yearlings that will equal those produced in any country, and all that is necessary is to carry out the plan of always using a pure-bred bull of one of the recognized beef breeds on the Southern farms.

Sales of Fine Horses.

On July 25th the following interesting letter was received from Truman's Pioneer Stud Farm, Bushnell, Ill.:

"We had a very pleasant visit this week from our old customers, Messrs. E. L. McClurkin & Son, of Louisa county, Iowa. These gentlemen were looking for the very best Shire and Percheron stallions that they could find, and were looking especially for greys. We sold them a dapple-grey imported Shire stallion and a dapple-grey imported Percheron stallion. Both of these horses have weighed while in our possession over 2,200 pounds each.

Another of our old customers from Louisa county, C. A. Blanchard, was on the lookout for the best young Percheron stallion that he could procure and he finally selected one of our very best colts that we were exhibiting at the Iowa State Fair. Mr. Blanchard has a stud of pure-bred Shire mares and is an old and valued customer of ours.

"To Messrs. Dan Jordan and Arthur Blackburn, of Marshall county, Iowa, we have sold a pair of imported Shire mares. We have also sold to Samuel Insull for his Hawthorne farm a yearling Percheron filly sired by Institute, which horse stands at the head of the Hawthorne Farm Percheron Stud. This filly is one of the grandest animals it has been our pleasure to see. Plenty of weight and backed up by more quality than we ever saw on a yearling Percheron filly. She has been greatly admired by a number of Percheron breeders who have seen her.

"We also sold the same gentleman the imported Percheron mare Ironis, a beautiful dark dapple-grey, weighing considerably over a ton and only recently imported. She is extraordinarily wide and deep; beautiful head and neck set on oblique shoulders; good back and strong loin; standing on the very best of feet and joints. We predict a great future for this mare and we hope to have the pleasure of seeing her in the Hawthorne Farm exhibit at the Illinois State Fair and International this year. These two grand animals will greatly strengthen the Percheron stud at the Hawthorne Farm.

(Signed) J. G. Truman, Manager."

GOOD BOOKS AND PAPERS.

CONSUMPTION OF FERTILIZERS AND CONSUMPTION OF POTASH.—We have received from the German Kali Works, McCormick Bldg., Chicago, Ill., two maps; one, showing the consumption of potash per 100 acres of cultivated land in the year 1910; and the other, showing the consumption of all fertilizers in the United States in pounds per acre of cultivated land. These maps furnish at a glance information for students of agricultural conditions. When such maps are complied each ten years and crop averages by states are compared with them the value of such records and of fertilizers will be highly appreciated. In the meantime, those who are specially interested in compiling evidence relating to crop conditions may write to the German Kali Works for a copy of each of the maps.

COTTON BELT OF THE UNITED STATES.—We have received from Dr. W. S. Myers, Director for the United States of the Chilean Nitrate of Soda Propaganda, a large colored statistical map on rollers, showing by counties in each state the cotton produced in the years 1907, 8, 9, 10 and 11, with the figures of the last year on top. The great map includes several lesser maps, one indicating the entire crop in order to show light and heavy production and the center of cotton growing in the United States; another is a weather map, and with tabulations of the entire cotton-raising statistics it is a complete representation of cotton growing. All Boards of Trade and associations of cotton growers should be sure to address Dr. Myers, 25 Madison avenue, New York, and secure a copy to be placed on the walls of their rooms for public benefit.

THE CALL OF THE LAND is by Prof. E. Benjamin Andrews, Chancellor Emeritus of the University of Nebraska. It is a finely-illustrated book of 385 pages, 5x7 inches, and the price is $1.50. Publishers, Orange Judd & Co., 315 Fourth avenue, New York. The book is rare and strikingly original. We mention subjects of a few chapters: "The Farmstead Beautiful;" Sunshine Farming; Health as a Duty; The Beef Supply; Taxation and Land; Socialism and the Farming Interests; Medicine and Morals; Etc.."

CATECHISM OF AGRICULTURE by Thomas Clark Atkeson, Professor of Animal Industry of the West Virginia University. This is a cloth-bound book of ninety-six pages, 5x7 inches. It is the real thing. Pertinent questions and definite answers. It covers the entire field of agriculture. Read it and refer to it; it will post you; it will refresh you. It is the most satisfying book we have read on agriculture in twenty years. Anyone who will send 50 cents to Orange Judd Co., 315 Fourth avenue, New York City, N. Y., will receive it by mail. Anyone who will send $1.00 to pay for two-years' subscription to The National Farmer and Stock Grower can select a copy of this book, "A Catechism of Agriculture," as a premium, and we will send it postpaid. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis Mo.

SOUTHERN CATTLE AT ST. LOUIS.

Sales reported July 31st included from the state of Mississippi nineteen yearlings, 350 pounds, at $5.00; thirteen cows, 646 pounds, at $4.10; twenty-six cows, 582 pounds, at $3.90; fifty-one cows, 714 pounds, at $4.75; six cows, 725 pounds, at $5.00; five cows, 948 pounds, at $5.50; five steers, 764 pounds, at $5.25 per 100 pounds. From Alabama, twelve mixed, 610 pounds, at $4.50; nineteen mixed, 534 pounds, at $4.25; seventeen bulls, 800 pounds, at $4.50 per 100 pounds. From Louisiana, fifty-six steers, 612 pounds, at $4.60; twenty-eight steers, 623 pounds, at $4.60; and twenty-three cows, 611 pounds, at $4.00 per 100 pounds.

St. Louis Horse Market.

Holland, Nugent & Maxwell Bros. Commission Company, National Stock Yards, Ill., reported as follows, July 30th: "There is a good market for a few full-made driving horses, a splendid demand for good horses five to eight years old, work horses, low to the ground and sound, weighing from 1,200 pounds up. The kind of horses selling best are Eastern chunks and draft horses that are ready to go right into the harness and do a day's work, 15.3 to 16 hands; full-made driving horses are all right. They are buying some cavalry horses; they must be fat, smooth and sound; full ages, five to seven years; no splints; in fact, no blemishes; and if they are good we can get you from $140 to $150 for them." Holland, Nugent & Maxwell Bros. hold auctions Monday and Tuesday of each week. The postoffice address is National Stock Yards, Ill.

European Protection.

"Prices of agricultural products in Continental Europe are higher than they are in the United States, and that this is due to ample home markets protected in all instances from competition with American products by distance and transportation charges, and in many instances by tariff laws and the excellent and attractive condition farm products are put into for market."—From Report of Texas Farm Life Commission in Europe.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

FARM AND RANCH LANDS.

ALABAMA.—FOR SALE FOR DIVISION. Alabama plantation, near Columbus, Miss., 1,500 acres, within one mile of railroad town. A considerable portion of this land lies in the valley of the Tombigbee river, richest land in the world, except the valley of the Nile. Fine farming or stock proposition; stock keep fat in winter on pasture. Colonial residence; eight tenant houses occupied by good laborers; stables; new woven-wire fences; three artesian wells of pure water; mild, healthful climate; and neighbors best sort of hospitable Southern people. Will sell for $17.00 per acre; easy terms; or will cut up and sell in smaller tracts. Will also sell 300 head cattle and hogs, work stock and farm implements. For further information address **E. B. Trahern,** Clarksville, Tenn., who has an undivided interest in above lands.

ARKANSAS.—160-acre fruit, small grain and stock farm; 130 acres in cultivation; good four-room dwelling; large, new barn; fine water; in heart of fruit belt; level as floor; no rocks. Deal with owner and save commission. Price, $10,000.00; half cash, balance five years. **J. N. Greene,** R. F. D. No. 1, Summers, Arkansas.

ARKANSAS FARMS.—Write for Homeseekers' Guide, with large list of bargains in choice farms. Wonderful opportunities. **L. E. Moore,** Searcy, Ark.

MISSISSIPPI.—One improved farm, 150 acres, and 80 acres good cut-over land, situated in George county, Mississippi. Particulars on request. **Mrs. E. B. Blalock,** Box 177, Como, Miss.

MISSOURI.—Improved farm of 40 acres on phone line. New land and a bargain at $700. **W. H. Spencer,** Bakersfield, Mo.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association,** 55 Palace Bldg., Minneapolis, Minn.

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND,** 7910 Adams Express Bldg., Chicago.

WANTED to hear from owner who has good farm for sale. Send description and price. **NORTHWESTERN BUSINESS AGENCY,** Minneapolis, Minn.

FARM LABOR DEPARTMENT.

WANTED.—An energetic man and wife on 150-acre farm, to take charge either on shares or salary. Farm is one of the best equipped in the state. Land has produced good results and is located in the healthiest spot in Missouri. **T. A. Conrad,** Arcadia, Mo.

MISSOURI NATIONAL CONTEST.

Egg Laying at Mountain Grove, Mo. —Individual and Pen Records.

Report of First Seven and a Half Months—Seventy Pens, Ten Hens to Pen—700 Birds in All.

Reported by Mr. T. E. Quisenberry, Director, Manager of Contest: At least three American hens and three British hens are in a close race to be the first to reach the 200-egg mark in the first eight months of the National Egg-laying Contest at Mountain Grove, Mo. An American hen only has ten eggs to lay in fifteen days to make a record of 200 eggs in eight months. All these hens have made a better record so far than Lady Showyou had made at this time last year. The leading pen record thus far this year is about 200 eggs ahead of the leading pen record at this time last year. The English pen of S. C. White Leghorns is 259 eggs in the lead of its nearest competitor. Two of the hens in this pen did not lay an egg in June, and if this continues some of the other pens may yet easily overtake them.

June was a scorcher in Missouri. Several deaths were reported in different sections of the state as a result of the heat. It was, of course, also hard on the hens. We had 133 broody contest hens in brooding coops at one time this month. Thirty-eight were put up one day and twenty-five on another, and such a large per cent. being broody at once cut down our egg yield for June. Other contests, which had nearly 50 per cent. of their pens composed of Leghorns, had less broody hens, of course, and made a little higher average for June than we did. Our total yield for June was 10,411 eggs, and the grand total to date is 70,386 eggs. The Leghorns in the North American Contest at Storrs, Conn., had made about the same average up to June 1st as had the Leghorns in the Missouri Contest. The larger breeds in Missouri had made a little higher averages than the same breeds in Connecticut, as a rule. At the present time the records are very nearly the same, on the average.

The twelve highest pen records to July 1st, being the record of ten hens or pullets for the previous seven months and a half, are as follows:

Pen Records, Seven and a Half Months.

	Eggs.
S. C. White Leghorns, England.	1,529
Silver Wyandottes, Iowa	1,270
Black Langshans, Missouri	1,248
White Wyandottes, Arkansas	1,222
Buff Wyandottes, Vermont	1,212
Barred Rocks, Illinois	1,192
Black Minorcas, Iowa	1,190
Buff Wyandottes, Missouri	1,192
S. C. White Leghorns, California.	1,185
Silver Wyandottes, Illinois	1,182
Black Minorcas, Missouri	1,177
S. C. Brown Leghorns, Missouri.	1,180

A thing which is worthy of our consideration is the fact that the pen of Black Minorcas from Iowa is a pen which was entered in the last year's contest and made a very poor record. The owner was not discouraged and entered the same hens again this year. More than half of them are two-year-old hens and they were among the leading pens last month and tied a pen of Anconas from Missouri for the silver cup for June, each hen laying 212 eggs. A pen of White Leghorns from California also went into the ranks of the first twelve pens and others moved up the list, as will be seen by comparing last month's report and this. The hens and pens which continue to lay a reasonable number of eggs during the hot weather are going to be the hens and pens which win.

Pen Records For June.

The twelve highest pen records for June are as follows:

	Eggs.
Anconas, Missouri	212
Black Minorcas, Iowa	212
R. C. White Leghorns, Missouri	210
Black Minorcas, New York	199
S. C. Buff Leghorns, Missouri	184
S. C. White Leghorns, California.	196
S. C. White Leghorns, England	191
Buff Wyandottes, Missouri	184
Black Minorcas, Missouri	181
White Wyandottes, Arkansas	178
Anconas, Oregon	178
S.C. White Leghorns, Pennsylvania.	176

Individual Records, Seven a Half Months.

The twelve highest individual records made thus far are as follows:

	Eggs.
Buff Wyandotte, Vermont	190
S. C. White Leghorn, England	187
Buff Wyandotte, Missouri	184
S. C. White Leghorn, England	179
S. C. White Leghorn, England	178
S. C. White Leghorn, England	175
Black Langshan, Missouri	171
S. C. White Leghorn, England	167
Buff Wyandotte, Missouri	165
R. C. White Leghorn, Missouri	165
Ancona, Missouri	164
Ancona, Missouri	162

Entries Coming in For the Third Contest.

About two-thirds of the pens for the Third Annual Contest, which begins December 1st, have already been entered. This promises to be the greatest laying contest ever held in this or any other country. We have the promise of pens from the United States, Canada, England and Australia. Our rules are liberal, the premiums large, the entry fee small, and the contest will be held under the auspices of a state institution, the Missouri State Poultry Experiment Station. No breeder's name need appear on the pen or in the reports unless he wants it to appear. The best breeders in Missouri and America should have a pen trapnested and have their stock pedigreed. You will have to hurry, as we can only accommodate sixty pens. We will also try out ducks again in the next contest.

The Feeding Test.

The pen which has feed of all kinds before it where the hens can help themselves dropped from first place last month to sixth place this month. They made a good record all during the winter and spring and surpassed all other pens. This would indicate that hens may do well where fed this way in winter, but it is not a good method of feeding hens in hot weather. The pen which gets nothing but corn, wheat and ground oats and nothing to drink but buttermilk has now passed to first place.

Pen No. 67 Fed by Automatic Feeders.

This pen gets exactly the same feed and treatment that our regular contest pens receive. The only difference is, that the grain is fed night and morning by hand to the pens in the contest, and this pen in the feeding test supply themselves with grain by working it out of an automatic feeder and exerciser. This pen is in second place, and this would indicate that this is not a bad method. The Connecticut Contest uses these same feeders exclusively in their contest and no grain is hand-fed. This method may prove to be a great labor-saver.

The United States Apple Crop.

From report of United States Department of Agriculture, July 1st, 1913: Condition, 59.4 per cent. of a normal, compared with 67.1 per cent. on June 1; 67.9 per cent. on July 1, last year, and 59.1 per cent., the average for the last ten years.

GENERAL STOCK NOTES.

The Farmers' and Shippers' Directory of Business Interests advertised in this edition is filling a long-felt want. The July edition was sold quickly and a new edition will soon be ready.

The state of Missouri has 33,200 automobiles, having gained 10,000 in one year.

It is reported by the Butchers' and Stock Growers' Journal of San Francisco that the Australian meat recently imported and sold there was from five to eight-year-old steers. That reminds us of the good old days in Texas when nobody sold steers under four years old.

LICE KILLER Licecil, strongest lice killing compound made. Works like magic. Simply put a few drops in nests and hang bottle in coop. Powerful evaporating vapors go into feathers, cracks and crevices. No painting, spraying or dusting. Easy to use. Circular free. Pound bottle prepaid 50c. Money back if it fails. Agents wanted W. H. Metzger Co., No. 28, Quincy, Ill.

LIVE STOCK BREEDERS' CARDS.

CARPENTER'S BEST BARGAINS.

Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Duroes, 100 to 150 pounds. All of the Poland-China Hogs were sired by the great Meddler and Walbridge Boars and from some of the most noted Sows in America. Duroes sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for them and mention this paper.

THE GRANDVIEW BREEDING FARM, Marmaduke, Ark.

POLAND-CHINA SPRING PIGS.

Big, smooth, fine Spring Pigs for sale. They have the size, shape and finish. Prices, $15 to $25. Come and see them or write.

D. F. BEAUCHAMP, Meredosia, Ill.

TRUMANS' PIONEER STUD FARM,
Ameica's Largest and Oldest.

Importers of
SHIRE, PERCHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,
J.G.TRUMAN, Manager, Bushnell, Ill.

LARGE STRAIN POLAND-CHINAS.

I am offering nothing but Spring Pigs at present. The best that money can buy. They have a tendency to make extra large ones.

S. R. GRIGG, Proprietor,
The Golden Ridge Farm, Mulberry Grove, Ill.

O. I. C. AND CHESTER WHITES.

February, March, April and May Boars and Gilts; no kin. Bred Sows, prolific, large kind. Pedigrees furnished. Prices reasonable. Also S. C. White Orpington Eggs at half price.

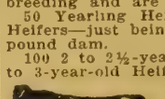
RAYMOND RUEBUSH, Sciota, Ill.

SALE OF HOLSTEIN CATTLE.
Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition.

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912, to March 1, 1913.



250 Matured Cows, very heavy producers, springing up ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds.

Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me concerning your wants.

JAMES DORSEY, Dept. F & S. G., Gilberts, Kane County, Illinois.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R.F.D. 2, Anita, Iowa.

JACKS AND PERCHERONS.

We have twenty-five of the biggest and best mammoth Jacks in Kentucky and a few Percheron Stallions. We will cut the price from $100 to $300 per head on every one. We have a big stock of High-grade Percheron Mares, Hampshire Swine and big Black Pigs. Write your wants and visit the Cloverdale Farm.

H. T. BROWN & CO., Lexington, Ky.

TAMWORTH SWINE.—Bred Gilts and all sizes of Pigs for sale. L. R. GEORGE, Breckenridge, Ill.

SCOTCH COLLIES FOR SALE.

A choice lot of pure-bred Collies, from three months to three years, dirt cheap for immediate delivery. R. FLEMING, Cuba, Kansas.

Wood Shingles Won't DO!

In this **20th Century AGE OF STEEL**, wood shingles are fast disappearing. They cost too much; they rot out too quickly; too much trouble to put on; too apt to catch fire. That's why 100,000 men have come to put these beautiful **Edwards STEEL** Shingles on their buildings.

Edwards Steel Shingles **never** burn nor rot. Come in big clusters of 100 or more, which makes them ten times as easy to put on as **wood** shingles. Each Edwards **STEEL** Shingle is dipped in **molten zinc AFTER** it is cut. No raw or exposed edges. No chance for rust ever to get a foothold. And the patented Edwards Interlocking Device, which allows for expansion and contraction, gives **PERMANENTLY water-tight** joints.

Edwards STEEL Shingles

Get Prices As to prices, these **STEEL** Shingles are far below wood. For we sell direct from factory to user and pay the freight ourselves. Just get our latest Steel Shingle Books and Prepaid Factory Prices. Then **compare**. Then see if you can afford common wood shingles when you can buy genuine Edwards **STEEL** Shingles at these prices. Give dimensions of your roof if possible, so we can quote price on entire job. Send postal today and our Catalog 857 and Prices will reach you by return mail.

Largest Makers of Sheet Metal Products in the World.

Take the Children Into Partnership.

No plan has been discovered to interest the boys and girls on the farm which equals that of taking them into a limited partnership in some feature of the farm's activity. Encourage the boy early to study papers, have him send for bulletins which are furnished free by the Agricultural Colleges and the United States Department of Agriculture. Give him a piece of ground to cultivate for himself, let him feel the joy of possession and achievement and it will turn dull tasks into play.

Let him raise certain animals to be all his own. Many a boy has met with his first disappointment when he finds that his calf has become his father's cow. The boy will enter the experiment, and the opportunity should not be denied him by the father who "knows that the experiment won't work." It will be worth all it costs in the education of the boy.

Let the girl have flowers, a garden plot, an interest in the poultry and a berry patch, so that she may earn money for her personal use. It will make her happy, enthusiastic, more contented and far less liable to leave home to seek her future in a city office or store. She will be sweeter and better as a girl, a lovelier type of woman for a wife and for motherhood.

Don't wait until you are dead before giving your children an interest in what you have.—Colorado Agricultural College.

The Five-dollar Bird on the Farm.

It takes a pretty good-sized or a very well-bred turkey to bring five dollars on the farm, and a part of this price must be deducted for food and care. But when we come to talk about a bird worth this amount which raises itself—or rather raises its own brood—and henceforth earns its own living unless it be during the very severest winter weather, this sounds almost like fairy talk. And yet scientists and observing farmers have proved many times that the story is no myth, and that the quail on the farm is worth five dollars, or very much more than on toast, both as a weed seed and as an insect exterminator.

According to statistics, we lose a billion dollars a year through insect ravages, and from $16,000,000 to $18,000,000 annually through the various weeds. In other words, we might as well afford to lose our rice crop and two-thirds of our corn annually as to suffer these mammoth leaks. And still we perpetually fight with insecticides and various other means, checking but never gaining on the pests.

The quail has the advantage of preying upon many pests which the majority of other birds will not touch. The rose-breasted grosbeak joins with it in feasting upon the Colorado potato beetle, which has no charms for the most of our winged friends. And Mrs. Nice, of Clark University, who has been a close observer of the quail, declares that a captive quail ate 101 potato beetles at a single meal. Florence Merriam is authority for the statement that seventy-five of these beetles were found in a single stomach. And since the quail's food is quickly digested and renewed several times a day, the value of a single pair and their progeny near a potato patch is apparent. They discount Paris green or the small boy with the pail and stick many times over.

The protection of quails in the South might help materially in solving the problem of the boll weevil, while wire worms, cucumber and squash bugs, cutworms, grasshoppers, chinchbugs, mosquitoes and many caterpillars are numbered among its victims. Dr. Judd estimates that the quail of Virginia and North Carolina alone consume during the three months from June 1st to the last of August 340 tons of insects. They will do as well for us if we but protect them and strengthen their numbers. Mrs. Nice estimates that two old birds with a family of ten youngsters will put an end to almost 791,000 insects.

As a weed destroyer its services are also most useful. Its daily ration numbers 600 burdock seeds and thousands of the smaller seeds, as pigeon grass and lamb's quarters, are consumed in a day. Mrs. Nice states that after the insect season is over and the season of weeds is at hand, this same covey will destroy nearly sixty million weed seeds.

The quail is easily the most prolific of all game birds, Capt. Bendire estimating the number of eggs in a clutch to run from twelve to eighteen. The second clutch is usually smaller, averaging only twelve. But even at this rate of increase, the farmer who starts in with a single pair of quails, protecting them absolutely from the sportsman, will have at the end of the year at least a couple of dozen of these efficient workers, and in two or three years his farm may be well stocked with birds at almost no outlay but very great gain to himself.—Bessie L. Putnam.

The Fire Hangbird's Nest.

On a bright May day a jubilant shout from the Babcock twins brought their mother to the window.

"It's a bird building a nest in the apple tree right under the bedroom window, mamma!" cried Bob.

"Such a beautiful bird, too," said Beth. "It's bright yellow with tips of black on its wings. Oh, and there's another! Look, two of them building the nest!"

Mrs. Babcock came out on the porch and sat down to watch the birds. "It's a pair of orioles," she said. "That is, most people call them orioles, though they are not really orioles, but starlings. At home we called them fire hangbirds —'fire,' because of their brilliant golden color, and 'hangbird,' because they build a hanging nest."

See! That one has got some horse hairs, and there comes the other one with some thread. Fire hangbird is a good name for them, I think," said Bob.

All that afternoon the children watched the birds at their work as they carried strings, hair and tiny bits of moss. They even helped out the birds by placing bits of string on nearby bushes and after they had scampered away and all was quiet the birds flew down and gathered up the strings. For several days the nest grew, and when finished it was about six inches long, beautifully woven, with a soft lining of moss, leaves and feathers. The children could look into the nest from the upstairs bedroom window.

The birds went to housekeeping in their cozy little hanging house, and every day Bob and Beth bade them good morning. Then one day Beth made a discovery. She was so happy that she slid down the banister so that she might the more quickly carry the news to her mother and Bob.

"Oh, the tiniest egg you ever saw is in the nest!" she cried. "Come up and see it."

Bob discovered a second egg a couple of days later and then Beth discovered the third.

The children so longed to see tiny birdlings hatch out of the eggs that they almost wished to stay at home instead of going to grandfather's farm for the summer. But the day came when the house was to be closed and the children took a last peep at the little mother bird sitting so contentedly on her eggs while the father bird was out hunting worms.

It was late summer when the family returned and the first thing Beth and Bob did was to run upstairs to see the birds.

A long sob from Beth and a howl from Bob brought Mrs. Babcock to the scene on a run. It was indeed a sad sight that met her eyes. The three tiny eggs remained in the nest unbroken but yellowed from exposure. Hanging over the nest was the mother bird, and the condition of the body showed that she had been dead for some time. Around her tongue was wrapped a piece of twine, one end of which had floated loose from the nest, probably in a high wind, and had wrapped around her tongue, pulling her from the nest and keeping her suspended in the air while she died of starvation. What had become of the father bird could not be known, but probably, unable to understand the tragedy, he had flown away and chosen another mate. —Janet Thomas Van Osdel.

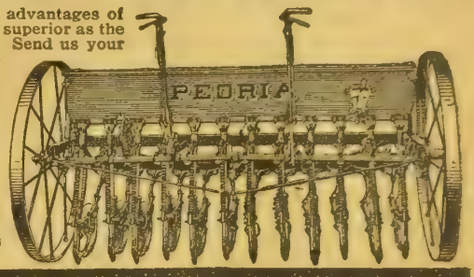
The Only Drill That Sows Grain in Any Kind of Soil—at a Proper, Even Depth

Think what it would mean to you to have *every* seed count and to have *every* stalk come up *evenly* and at the *same time*. You can easily accomplish this—with The New Peoria Drill equipped with our famous Disc Shoe Furrow Opener.

It combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming a furrow and depositing the seed. The Disc Shoe Furrow Opener is the *only* one that sows every seed at an *exact, even depth*, in a *packed furrow*. No seed touches the disc and no dirt falls back into the furrow until *after* the seed is deposited. No practical, progressive farmer can fail to see the many money-making and money-saving advantages of this wonderful Disc Shoe Furrow Opener—found *only* on

The New Peoria Drill

There are also many other advantages of this drill, each one just as superior as the Disc Shoe Furrow Opener. Send us your name and address on a postal now for catalogue and all details of construction. Let us prove to you that it will pay you to discard even a new drill in order to buy and use the New Peoria. Will you spend a penny for a postal *now* to get all the facts? Address,



Peoria Drill & Seeder Co.

2430 North Perry St., Peoria, Illinois

Bookkeeping For the Farm.

The fact that many of the larger farms of the country, such as the Hawthorne Farm at Barrington, Ill., the Hyde Seed Farm at McFall, Mo., the Henly Ranch at Henly, Mo., and others, are now employing special bookkeepers, is causing a larger number of farmers' sons and daughters than ever to seek business college training. Not that these boys and girls expect to secure salaried positions on farms "away from home," but because farmers generally are beginning to recognize the great value of farm bookkeeping and farm accounting. Many good positions are held by graduates of the Gem City Business College. Address, Lock Box 37, Quincy, Ill. Write for their catalogue.

Mr. D. F. Beauchamp, of Meredosia, Ill., breeder of pedigreed Poland-China swine, has changed his advertisement so as to mention the price of spring pigs of his own breeding that he has for sale.

GORDINE WHITE LINIMENT.

A Testimonial.—St. Louis, Mo., May 26, 1913. Grand Chemical Co.: "Gentlemen:—You may be pleased to know that we have used your liniment on most of our horses and the results have been wonderful. We have found it unexcelled for cuts and bruises, galls, soreness, etc. Since using Gordine we have not had our horses laid up this summer with galls or sore shoulders, while last summer we averaged about five horses out of work every day from their ailments. 'Gordine for us.' Very Truly Yours, (Signed) LOUIS FREUND, Branch American Bakery." Gordine White Liniment is advertised in this paper on page 5. (Adv't.)

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen, having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Halo Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

Footpaths Along Country Roads.

He who travels much along country roads has a number of things very emphatically impressed on him. One of these is that the builders and maintainers of country roads generally have in mind only the wagons that are to pass and make no provision for the persons that go a-foot.

In the city, or even the smallest village, it is not so. There we have the sidewalk, of cement or wood or of some other material; and the person going a-foot has an easy time in getting about. But on the country road the foot passenger often has a very difficult time in getting over any mile of it. He picks his way over hard ruts or through deep dust if it is dry and deep mud if it is wet. Often the road overseer has had broken stone distributed for a mile or so and left rolled, depending on wagons and time to reduce it to a condition that will make it easy to get over.

But happy is the walker when occasionally he strikes a piece of road where the side has a smooth and well-worn path. It is better still if the path runs on the road right-of-way between the ditch and the fence, for then he does not have to dodge either teams or automobiles or perhaps have to take very much of their dust

Now, why should not such footpaths be provided for along every country road? Why should not the road overseers take into consideration the school children and school teachers and others that need to pass on foot along these roads? It would be an easy matter to block out a foot path, which, when once made, would remain forever and require no repair. The feet of the passers would keep it hard and easy to use.

It would require some work. Here and there a low place would have to be filled up. Bushes and trees would have to be taken out of the way in other places. Occasionally a stream or open drain would have to be spanned by some kind of a rustic bridge. The ground might need to be packed down some on some soils to start the feet to following the path.

It would mean shortening of the distance between farms and the bringing nearer of the school and the church. It would mean pleasure every time a foot journey had to be made, in the place of the labor that now attends it.

The straighter the path the better, and the fewer ups and downs the better. How wide it shall be can be determined by the feet of those that use it. A two-foot hand roller should be useful in marking out the way. The grass can be allowed to grow on it, for where feet pass often the grass grows thin and small and provides a comfortable cushion for the weary feet.

Such a path will prove to be a permanent improvement on every highway. It has not been created on any road the writer knows about; but the reason seems to be that the matter has not been considered. Roads were made first when they had to be, and were built only so far and so good as they had to be, and we have stopped looking beyond necessity. It is now time to consider the matter of comfort as well as the matter of necessity in the construction of our great country highways.

Diarrhoea in Babies.

One reason that babies are troubled more with diarrhoea in hot weather than in cold is because there is more danger of nipples, bottles and milk becoming sour than even the most careful mother suspects. The nipples, bottles and all milk containers must be kept scrupulously clean, scrubbed with hot water and soap every day, rinsed, scalded and then kept in an antiseptic water (made by adding a pinch of borax or of bicarbonate of soda to the water) for several hours.

If the baby does contract diarrhoea give him a dose of castor oil. The diarrhoea is a certain indication that there is poison in the baby's system which nature is trying to eject, and the dose of oil will help to remove the poison. Stop giving the baby milk, which in this condition of the stomach and bowels will but add to the fermentation and prolong the diarrhoea. Instead give barley water or flour gruel until the bowels begin to be regular, then add milk gradually to the gruel until the baby is in condition to be restored to his normal diet.

During this illness the baby will probably crave water, which should be given to him freely. He should be bathed frequently and kept in the fresh air as much as possible.—Janet Thomas Van Osdel.

Troublesome Perspiration.

The skin is one of the great excretory organs of the body, and it exudes a great deal of waste matter. Much of this (about two pints daily) is the insensible or invisible perspiration. It is only when the perspiration far exceeds this amount that it becomes bothersome as to quantity. Excessive perspiration is usually due to overexertion or to a great quantity of tea, coffee, water or liquid in any form that is taken into the body. The more liquid that is drunk the more freely will the subject perspire. Abstaining from drinking liquids in any quantity will largely check the unusual flow of perspiration. A daily bath in cool or cold water will also help.

It is the odorous perspiration that causes annoyance. The cause of this is usually constipation or some irregular condition of the stomach or bowels. A physic, perhaps repeated several times, followed by a careful, simple diet, may correct this evil. Daily baths should be taken and a little borax added to the bathing water. Frequent changes of the underwear should also be made. Some persons afflicted with odorous perspiration strive to hide it under abundant applications of scented talcum powder. But a clean, healthy body has a sweet fragrance of its own and needs no artificial scents.

A perspiration that reddens the clothing under the arm bothers some people. This reddish coloring indicates that the hair in the pit of the arm is afflicted with a microbe. A thorough washing under the arms morning and evening with a generous quantity of soap and water will correct this.—Janet Thomas Van Osdel.

POTASH PAYS

Profit in Wheat

Wheat is profitable if the yield is good. A good yield is insured by using the right fertilizer.

No crop gives better profits for a small fertilizer expenditure provided intelligence is used in buying, and a fertilizer is used that is suited to the soil. Almost any fertilizer will increase the wheat crop, but why not get the one that will give the best profit? This is the kind in which the phosphate is balanced with

POTASH

Insist on 6 to 8 per cent. of Potash in wheat fertilizer. Some of the best growers use 10 per cent. If you have trouble in getting such brands buy Potash and add it yourself. We will sell it to you in any amount from 1 bag (200 lbs.) up. Write us for prices, naming amount needed, and for free book on *"Fall Fertilizers."* It will save money for you.

STERLING SILVER THIMBLE.

Given as a Premium With That Nice Family Publication, the Universal Magazine.

Every woman, whether she sews much or little, should have a Silver Thimble. No need to use a rusty steel or dangerous brass thimble, when a Solid Silver Thimble can be had for the cost of packing and mailing.

If you are not now a subscriber to the UNIVERSAL MAGAZINE you are missing one of the most delightful publications, and as a trial offer we will send the UNIVERSAL MAGAZINE for a year and one of these Thimbles for thirty cents in stamps or coin. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication. The sizes of the Thimble are 7, 8, 9 and 10; order by size. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Independence of the Farmer.

The farmer has for centuries in this country been looked upon as an independent man. It is common to hear people say: "The only independent life is that of the farmer." Of course, when they said that they meant the farmer that owned the farm and not the laborer working for him.

But of late years the independence of the farmer has been placed in jeopardy by labor conditions and perhaps somewhat by the market conditions. It is a complaint now often heard that it is impossible to get adequate help.

Most of us know men who have gone out of some phase of farming simply because of the impossibility of getting enough labor all the time required. Three farmers the writer could name have given up producing milk for market because milkers could not be obtained.

So in a measure the farmers have become very dependent, as a class. If they shall become more so will depend on how they work out the present situation.

One farmer says that he has worked it out in the favor of independence. He has eliminated those kinds of work that require large numbers of workers for short times and has settled down to the kind of farm activity that requires a small amount of labor continuously. In addition he has put in machinery for about every conceivable purpose.

This meant for him a considerable outlay for machines, but each machine is so carefully looked after that it will practically last a lifetime, and it is astonishing how many things can be done with machinery when one sets out to find all the machines.

Thus there are many farm operations that can be done with a farm power of some kind, whether the force comes from gasoline, steam, the wind or from some other source. The beauty about it is, that this force can in some cases be stored up in barrels or tanks, and is not dependent on human wills. The farmer's son can with these machines do more than several hired men without the aid machines. Also the farm boy is more interested in operating a machine than he is in giving his own labor to do the same kind of work unhelped by a machine. The boy that dreads the sawing and splitting of ten cords of wood a year finds it a pleasant task when he merely operates the machine that saws and splits by sawing the same wood.

Many farmers have enormously reduced the amount of work that had to be done by hand. There was the watering tank to which the cows in winter had to be driven twice every day. Now a power machine pumps the water directly into the barn and the work is done by pulling a lever and opening a faucet. Previously the boy had to bring all the water on a certain farm home, and it had to be from the spring house at the foot of the hill. Now two pipes run from that spring house—one into the house, where there is a hand pump that delivers the water as wanted. The other pipe goes into the barn and up into a big tank, where a supply is accumulated that will last for days.

Through machinery and mechanical forces the farmer can regain the independence he thought he had lost. Developments and inventions continue to be made that are very greatly affecting this phase of farm life.

Tuberous Begonias.

Few tuberous plants are worthy of more attention; few are such entire strangers. And yet a well-grown tuberous begonia is always certain to attract more than passing admiration. Those familiar only with the fibrous-rooted varieties can scarcely realize that the immense blossoms, rivaling those of the gloxinia in size and brilliancy of color, belong to the begonia family.

The leaves have the delicately-cut outline characteristic of the family, and, though of plain green, the reflections shown by the light render the plant attractive, even when not in bloom. The buds are as handsome as flowers from the time when they are half grown, and the fully expanded flowers, the double ones of which have been likened to the camelia in form and substance, remain in perfect condition for many days. The colors of both single and double varieties are shown in pure white, yellow, orange, pink, salmon and all modifications of red, from a light coral to a most flaming scarlet or intense crimson, and as these colors are repeated in the fringed varieties, one cannot fail to be pleased. For a shaded porch, conservatory or a shaded spot in the yard that is protected from wind, no summer bloomer is more desirable.

Since it is almost impossible to tell which is the top of the tuber, yet since the plant has a strong objection to being placed in an inverted position, it is well to soak the tubers a few days in damp moss until the leaves start. Then plant shallow in rich loam and sand, and water sparingly until growth has commenced. If too moist or too dry there is a tendency to drop the leaves, but if drainage is good this matter is easily regulated. A five-inch pot is the proper size for a single bulb, though a pleasing effect is obtained by using larger pots and planting three tubers in each.

In autumn the tops gradually die to the ground. The plant should be gradually allowed to become dry, and when the tubers are ripe they may be packed away in paper bags or in dry sand in a frost-proof place until the spring planting—a most convenient way to dispose of them, if window space is limited. This gives both room and pots for the winter bloomers.—Bessie L. Putnam.

Baby's Kiss.

It is natural for the lover of little folks to want a kiss from them. But if your child declines such familiarity from strangers to it, rejoice rather than strive to overcome the timidity. Plainly excuse its shy nature instead of apologizing for and trying to overcome it.

Baby is right, though for a reason which it cannot realize. The little one who is free to go to all, and to be caressed in turn by each of the loving and well-meaning cousins and aunts, has really a hard time. The bouncing and shaking and general stirring too often given would quite distress an adult, while the startling sensations that are aroused, the wonder what is coming next, prove no advantage to the nervous system.

Worst of all, there is the danger from disease. Even a common cold is now known to be infectious—not to mention tuberculosis and the host of other dire maladies which may be insipient in the system. The child so confiding as to submit to promiscuous hugging and kissing is not only to be pitied, but it is the rightful subject of anxiety on the part of the parent. These intimacies belong to the immediate family, and no one has a right to attempt their transfer beyond the home circle.—Bessie L. Putnam.

School terms open June 10, Sept. 2, Oct. 13, Nov. 25, 1913; Jan. 5, Feb. 17, Mar. 30, May 12, 1914.
New classes formed each term. Students advance rapidly.

Trade School Engineering Courses

Highland Park College

THE industrial world is calling for engineers of all kinds. Opportunities for good positions and good salaries for the young man fully equipped are greater to-day than ever before. Take your first job as a trained man—not as an apprentice. Start at a good salary. Our graduates are found in paying positions everywhere. Three-year courses of 48 weeks each are equal to the four years at other colleges.

Machinist, Automobile Machinist, Chauffeur and Manual Training Courses

The Machinist Course is completed in 48 weeks, equivalent to 5 years' apprenticeship. Actual work on lathe, drill, shaper, chuck, milling machine, planes, grinder and vise. Special attention to accuracy and speed.

Automobile Machinist Course is of 48 weeks' duration, and is the most complete ever offered. Qualifies you to take a position in factory or as foreman in large repair shop.

Chauffeur Course is complete in 12 weeks. In that time we teach you how to repair any car, and you are qualified to work as a repairman in a garage. There is also a special six weeks' driving course.

Manual Training Course may be completed in 48 weeks. In the cities and larger towns there is a great demand for *trained* manual training teachers, and the salaries paid are good, averaging at the start about $100 a month.

Also Civil, Electrical, Mechanical, Steam and Traction Engine Courses, co-ordinate with others in the Engineering Department. Complete one year course in Mechanical Drawing.

FULLY EQUIPPED REPAIR AND MACHINE SHOPS

We have the largest and most complete school machine shops in the United States, containing all the necessary apparatus, tools and machinery. School all the year. Enter any time. Small tuition fees. Minimum living expenses. Magnificent buildings, fully equipped. Equal to best Eastern schools. Send for catalogue.

GEORGE P. MAGILL, President **Highland Park College, Des Moines, Iowa**

Cistern Filters Do Not Remove Germs.

Cisterns that are properly constructed and receive rain water from roofs generally afford water of good sanitary quality, but if water of doubtful quality is stored in cisterns the supply is of course not safe for domestic use. Filters used in connection with cisterns are of value in making the water clear, but are generally of no value in removing disease germs. Many cisterns are divided into two parts by a brick wall, the water being admitted into one compartment and drawn from the other. In such cisterns the water passes through the brick and in that way is improved in clearness and color, but not generally in sanitary quality.—United States Geological Survey.

Stepping Lightly.

If the two-year-old refuses to step lightly to avoid waking baby, teach him to mimic the cat, which walks on its tiptoes. Tell him the story of how the cat slips along in the dark after a mouse, stepping so softly that it makes no noise.

Mamma wants everyone to walk just as Kitty does when baby is asleep, so that the noise will not waken it. And this is a very good habit to practice at all times. No one likes to hear stamping of feet, even if they are not asleep. Loud steps and heavy ones are not pleasant to anyone.

If you have a chance to show the little one a real live bear, call attention to its gait. Let him see how much more graceful the cat walks than the bear, which sets its foot down flat and goes ambling along. It would never get near enough to a mouse to catch it. And we certainly never want to get into the habit of walking so awkwardly. And so when we practice stepping lightly to avoid waking baby we are really learning to walk in a manner that people will not dread to hear us coming.—Bessie L. Putnam.

The above patterns will be mailed to any address by the Pattern Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Economical Summer Hints.

If you wish to take care of your umbrella after coming in out of the rain, let it down and stand it on the handle, that it may drain in that position. The water will thus drip from the edges of the frame and the cover dry uniformly. A silk umbrella is much injured by being left open to dry.

If you have a lawn or percale dress that is faded nearly white, you can make it perfectly white by putting five-cents' worth of oxalic acid in a bucket of water and then putting the garment in the solution and letting it remain until the color is all out. It should not remain in the solution too long, and as soon as the color is out, rinse thoroughly and hang out to dry.

If one will carefully darn the toes and heels of thin lisle and silk stockings with silk thread of the same color before wearing them they will wear much longer. The stitches must be taken only up and down in parallel rows, not across. Stockings will last twice as long if they are laundered frequently than if allowed to dry when moist with perspiration, as this rots the threads of any fabric.

If you find that lace insertion in waists or dresses is beginning to pull or break, whip footing under it and darn the broken place. It will never be noticed that the insertion is double, and it will wear much longer.

Summer waists will last longer, because they will not have to be washed so often, if they are well cared for when they are removed from the body, and so with thin summer dresses. The waist should be hung especially over the back of a chair until thoroughly dried, then it should be folded smoothly lengthwise and laid away carefully. No thin dress should hang, as it will soon become stringy and limp. All should be folded when put away, and the manner in which this is done lies the secret of their continuing to look new.

You can make a cheap and excellent powder to use in the shoes with four parts of boric powder, one part of salicylic acid and about five parts of pulverized starch, and this must be well mixed and sifted. A little of this powder sprinkled in the inside of the sole of each shoe every morning will help to absorb the moisture and will make the shoes feel much easier on the feet, and this is especially useful if the feet perspire freely or if one must take long walks.

There is nothing more useful during the summer than a bottle of boric solution kept ready for use. A little of this boric solution applied after the bath with a piece of soft linen will help to prevent perspiration and destroy the odor, and a weak boric solution used on young children in the same way after their bath will prevent chafing, heat and all skin eruptions.—Aline.

Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. In One Hour I Learned to Play the Piano at Home

Without Lessons or Knowledge of Music Any One Can Play the Piano or Organ in One Hour.

Wonderful New System that Even a Child Can Use.

He—"You surprised me! You told me yesterday you couldn't play a note!"
She—"I couldn't; I learned to play in one hour by the wonderful 'Easy Method Music!'"

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular music with all the fingers of both hands and playing it well. The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write saying, "Send me the Easy Form Music Method as announced in The National Farmer and Stock Grower.

FREE TRIAL

The complete system together with 100 pieces of music will then be sent to you free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied send us $1.50 and one dollar a month until $2.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company, 343 Clarkson Bldg., Chicago, Ill.

SELECTED POETRY.

THE RENTED FARM.

To-day I wandered o'er the farm
Near which my early lot was cast,
And viewed the changes with alarm,
Changes that made the happy past
Seem far remote and fading fast.

The fields, where record wheat once grew,
Are foul with briars and goldenrod,
Sumac and ivy. There a few
Lean cattle bite the scanty sod—
Where corn once ripened, thistles nod.

Fences are falling, and the sad
Old barn which once was filled with sheaves,
Where I have played, a little lad,
Shows sagging roof with moss-grown eaves—
Its driveway choked with weeds and leaves.

The boys have grown, and left the place;
The father sleeps, now, on the hill;
And not one dear, familiar face
Of all I knew is left there still;
A tenant robs the soil at will.

The simple, quiet country life
Our fathers loved no longer seems
To please our young whose minds are rife
With thoughts of vast commercial schemes,
Where sudden wealth absorbs their dreams.

Thus do they leave the land to be
Half-tilled by those whose only care
Is present gain—resigned to see
Their birthright useless, brown and bare,
Results confront us everywhere.

Better to base one's hopes upon
The sure foundation of the soil;
Content to hold, when youth is gone,
An humble recompense for toil,
Than scheme and fret for power and spoil.
—John E. Dolson, in New York Times.

OUT ON THE FARM.

Out upon the farm it's lovely just about this time o' year;
Lambs and calves are gettin' frisky, birds beginning to appear;
Dawn along the stream the willows have a sort of golden glow,
And the hens are cacklin' loudly and the roosters proudly crow;
Little colts with tails all curly hoist their hind legs in the air,
And the farmer gets up early to begin his duties there.

Out upon the farm it's splendid just about this time in spring,
When the winter's gloom is ended and there's cheer in everything;
Larks and robins busy singin', blackbirds chirpin' in the trees,
And a cheerful promise whispered out of every passin' breeze;
Squirrels scootin' on the fences, fields all gettin' green once more;
Every day the world commences to look finer than before.

Out upon the farm it's lovely just along about this time;
There are new nests in the hedges, and the wheat is lookin' prime;
All the streams are gladly gurglin' where the pebbly shallows are;
At the gate a pig is tryin' to break through a lower bar;
Round the gables swallows dartin', stubbles turnin' dry and brown,
But the work out there is startin', and I guess I'll stay in town.
—Chicago Record-Herald.

PSALM OF THE HELPERS.

He that turneth from the road to rescue another
Turneth toward his goal;
He shall arrive in due time by the foot-path of mercy,
God will be his guide.

He that taketh up the burden of the fainting
Lighteneth his own load;
The Almighty will put His arms underneath him.
He shall lean upon the Lord.

He that speaketh comforting words to mourners
Healeth his own heart;
In his time of grief they will return to remembrance,
God will use them for balm.

He that careth for the sick and wounded
Watcheth not alone;
There are three in the darkness together,
And the third is the Lord.
—Henry Van Dyke.

MERELY A WOMAN.

Because she loved him she did not care
How others worried and strove and schemed:
To her the weather was always fair
And sweet were the peaceful dreams she dreamed.

Because she loved him her look was glad
And the fates were good and the world was bright,
And she wondered, seeing those who were sad,
Why their cheeks were wan and their lips were white.

Because she loved him she did not sigh
For rights that her eager sisters sought;
She was willing to let the days drift by,
He always first in her dearest thought.

Because she loved him she could not see
The cunning snares that he slyly set,
And, at last, deserted and dying, she,
Being merely a woman, loved him yet.
—Chicago Record-Herald.

LIFE.

Life is too brief
Between the budding and the falling leaf,
Between the seed time and the golden sheaf,
For hate and spite.
We have no time for malice and for greed;
Therefore, with love make beautiful the deed;
Fast speeds the night.

Life is too swift
Between the blossom and the white snow's drift,
Between the silence and the lark's uplift,
For bitter words.
In kindness and in gentleness our speech
Must carry the messages of hope, and reach
The sweetest chords.

Life is too great
Between the infant's and the man's estate,
Between the clashing of earth's strife and fate
For petty things.
Lo! we shall yet who creep with cumbered feet
Walk glorious over heaven's golden street,
Or soar on wings!
—Margaret E. Sangster.

"BRIDGE OF SIGHS."

One more Unfortunate,
Weary of breath,
Rashly importunate
Gone to her death!

Take her up tenderly,
Lift her with care;
Fashion'd so slenderly,
Young and so fair.

Look at her garments
Clinging like cerements;
Whilst the wave constantly
Drips from her clothing;
Take her up instantly,
Loving, not loathing.

Touch her not scornfully,
Think of her mournfully,
Gently and humanly;
Not of the stains of her,
All that remains of her
Now is pure womanly.

Make no deep scrutiny
Into her mutiny
Rash and undutiful;
Past all dishonor,
Death has left on her
Only the beautiful.

Where the lamps quiver
So far in the river,
With many a light
From window to casement,
From garret to basement,
She stood, with amazement,
Houseless by night.

The bleak wind of March
Made her tremble and shiver;
But not the dark arch,
Or the black flowing river;
Mad from life's history,
Glad to death's mystery,
Swift to be hurl'd—
Anywhere, anywhere,
Out of the world!

In she plunged boldly,
No matter how coldly
The rough river ran—
Over the brink of it,
Picture it—think of it,
Dissolute Man!
Lave in it, drink of it
Then, if you can!

Still, for all slips of hers,
One of Eve's family—
Wipe those poor lips of hers
Oozing so clammily.
Loop up her tresses
Escaped from the comb,
Her fair auburn tresses;
Whilst wonderment guesses
Where was her home?

Who was her father?
Who was her mother?
Had she a sister?
Had she a brother?
Or was there a dearer one
Still, and a nearer one
Yet, than all other?

Alas! for the rarity
Of Christian charity
Under the sun!
Oh! it was pitiful!
Near a whole city full,
Home she had none.

Sisterly, brotherly,
Fatherly, motherly,
Feelings had changed;
Love, by harsh evidence,
Thrown from its eminence;
Even God's providence
Seeming estranged.

Take her up tenderly;
Lift her with care;
Fashion'd so slenderly,
Young, and so fair!
Ere her limbs frigidly
Stiffen too rigidly,
Decently—kindly—
Smooth and compress them;
And her eyes, close them,
Staring so blindly!

Dreadfully staring
Through muddy impurity,
As when with the daring
Last look of despairing
Fixed on futurity.

Perishing gloomily,
Spurred by contumely,
Cold inhumanity,
Burning insanity,
Into her rest—
Cross her hands humbly,
As if praying dumbly,
Over her breast!
Owning her weakness,
Her evil behavior,
And leaving, with meekness,
Her sins to her Savior!
—Thomas Hood.

THE AUTO ON THE FARM.

The auto on the farm arose
Before the dawn, at four,
It milked the cows and washed the clothes
And finished every chore.

Then forth it went into the field
Just at the break of day;
It reaped and threshed the golden yield
And hauled it all away.

It plowed the field that afternoon,
And when the job was through
It hummed a pleasant little tune
And churned the butter, too.

And pumped the water for the stock
And ground a crib of corn,
And hauled the baby 'round the block
To still its cries forlorn.

Thus ran the busy hours away
By many a labor blest,
And yet, when fell the twilight gray,
That auto had no rest.

For while the farmer, peaceful eyed,
Read by the Tungsten's glow,
The patient auto stood outside
And ran the dynamo.
—Exchange.

MR. LUCK AND MR. WU'K.

I was settin' by mah winder,
W'en O, mah laws a massy!
Young Mistah Luck went strollin' by
A-lookin' pert an' sassy.
He cyurls wuz slick, he teef wuz w'ite,
He laf at me, above him;
Look lak he wuzn't ary one
But des arbleedge ter love him.

Den bimeby, Mistah Wu'k go by,
Des lak he in a hurry,
An' he ain't waste no looks on me,
But dat ain't mek me worry!
Case 'pears lak Mistah Wu'k an' me
We ain't a-gwine ter hit it;
We ain't no mo' an' 'gin ter play,
Befo' he hab ter quit it.

Nex' time I see young Mistah Luck,
He settin' in de guttah;
While Mistah Wu'k went whizzin' by,
A-ridin' in he autah.
An' I ain't tek no notice ob
Dat gent, wid cyuris ambros'al;
I hatter run 'phone Mistah Wu'k,
Dat I done 'cept his 'posal.
—The Independent.

THE ONLY WAY.

What stuff folks fill the papers with!
Why, now, they even say
One can't engage a good, plain cook,
And get that cook to stay.

I've had her now these thirty years,
My stewer, broiler, baker;
A first-class cook, and just as plain
As smallpox scars can make her.

Yes, thirty years have now elapsed
Since I this helper took;
I married her in '83,
My priceless, good, plain cook.

The last Elgin butter quotation in July was at 26 cents a pound, against 26 cents a year ago, and 25 cents two years ago.

The Farmers' and Shippers' Directory of Business Interests.

A New Publication by the Hale Publishing Co., of St. Louis, Mo.—Corrected, Enlarged and Issued Frequently—Price Only 50 Cents a Copy—A Useful Book That Farmers and Shippers Never Had Before.

Next Edition, Dated October 1st, Will Be Issued and Mailed in September—Corrections and Additions Are Now Being Made and Orders Solicited.

The FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS is designed to contain the name, occupation and business address of all the firms engaged in such business, that their names, address and line of goods manufactured or handled may be of value to general grain farmers, stock raisers, ranchmen, dairymen, fruit and vegetable growers, poultry and bee-keepers, and all others engaged in agricultural pursuits or in handling farm products. The book is arranged by states and all the names and addresses are in alphabetical order.

INDUSTRIES INCLUDED IN THE BOOK.

The list includes an alphabetical arrangement of names, addresses and occupations of individuals and firms representing the following industries:

Agricultural Books and Charts—Agricultural Implements—Arms and Ammunition—Auctioneers, Live Stock—Bee-keepers' Supplies—Building and Construction—Cattle Troughs, Self-feeders—Cisterns and Tanks—Colonization Companies—Commission Agents, Cotton and Wool—Commission Agents, Dressed Meats—Commission Agents, Cattle, Hogs and Sheep—Commission Agents, Hay, Grain and Seed—Commission Salesmen, Butter, Cheese, Eggs, Poultry and Produce—Commission Agents, Horse and Mule—Co-operative Associations—Cotton-ginning Machinery—Creamery and Dairy Distributers—Dairy Apparatus—Dynamite and Blasting Powders—Electric Farm Appliances—Engines For Farms—Experts, Farm Specialties—Farm Chemicals and Sprays—Farm Books and Papers—Farm Tools and Hardware—Fencing, Farm and Ranch—Fertilizer Manufacturers—Fruit Specialists—Grain Elevators and Graders—Harness and Saddles—Horse Goods—Horse and Mule Dealers—Incubators and Brooders—Irrigation Plants and Machinery—Live Stock Dealers—Merchants, Farm Goods—Motor Cars and Trucks—Nurserymen and Florists—Packers, Abattoirs and Wholesale Butchers—Paints and Varnish—Poultry Supplies—Printers, Fruit and Package Labels—Purchasing Agents, Cattle, Hogs and Sheep—Road Machines—Roofing—Sale Stables—Seed Growers and Dealers—Sheep Dip and Specialties—Stock Foods and Tonics—Stock Yards and Markets—Stump Pullers—Swine Breeders' Goods—Tractors, Farm—Trade Publications—Vegetable and Fruit Packages—Vehicles and Harness—Veterinary Appliances—Water Engines and Powers—Water Systems—Well-drilling Tools—Windmills and Engines—and all other interests having business connections with the farm interests of the country. If your business is entitled to entry, send in your business card or letterhead.

The October edition will contain 5,000 such names and addresses. Send 50 cents for a copy of the October number. It is worth the money and more, and will be mailed in September.

Special Note.—We will furnish our monthly NATIONAL FARMER AND STOCK GROWER for two years and one copy of the FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS for one dollar.

TIGER LILLIE—HACKNEY STALLION. At a contest held at Empire City Park, New York, in August, this Hackney stallion was awarded the blue ribbon as the best sire of cavalry horses. TIGER LILLIE was exhibited by Reginald C. Vanderbilt, who has exhibited him with great success. In the year 1905, at the Philadelphia Horse Show, he won the first prize for best American-foaled Hackney stallion from imported sire and dam, and the picture was then obtained. It appears on page 225 of the Book of Live Stock Champions advertised on page 31 of this paper. We especially invite attention to the Book of Live Stock Champions. In it there are 750 pictures of equal value to that of TIGER LILLIE, consisting of the most illustrious animal champions shown in the last ten years.

and Stock GROWER

ST. LOUIS AS A COTTON MARKET.

An Important Center For the Sale of an Immense Number of Bales Direct From Fields of Production to Points of Manufacture and Export.

A Market With a Record For Quick and Satisfactory Sales at Fair Prices—Economical Conditions For Holding Cotton When It Must Be Held.

(By Philip H. Hale, Editor National Farmer and Stock Grower, St. Louis, Mo.)

The St. Louis market is not located in the midst of cotton fields and therefore has not the roadway blockaded with wagon-loads of cotton, but it is nevertheless a first-class cotton market, and when the advantages are stated it appears that as a distributing point for cotton it has no superior. A first-class market is one where no sacrifices have to be made by the shipper and where usually he is sure of getting the benefit of active competition and the most economical service in charges and freight rates. Upon such basis St. Louis stands high as a cotton market.

Receipts of Record.

Within recent years the St. Louis market has received and distributed as many as 989,959 bales of cotton in one year. In the year 1912 the receipts were less, being 668,579 bales, including through shipments, which indicate that St. Louis is on the line of distribution, even though the movement originated in other cities. The record of the freight movement indicates that without the sale of a single bale in St. Louis nearly a million bales would pass through the St. Louis gateway on the natural line of traffic from the gin to the factory and indicating St. Louis to be a natural meeting place for buyer and seller.

Where the Cotton Comes From.

The St. Louis market receives more cotton from Arkansas than from any other state. St. Louis being naturally the principal market of the Missouri crop, receives the bulk of it. Northern Mississippi is the next to ship cotton to St. Louis, followed by Oklahoma, Louisiana, Alabama, Kentucky, Tennessee and Texas. In the states from which the St. Louis market draws supplies, and equally available from the standpoint of location as the bales received and shipped through St. Louis, are about 6,000,000 bales of cotton which in a business way are tributary to St. Louis, because from the aforesaid territory the cotton can be shipped to St. Louis, assembled and compressed here and be distributed and delivered at destinations at less cost for freight and carrying charges than if shipped to any other center.

Competitive Selling.

In some of the circulars that we have read as issued by the cotton trade we find reference to shipments divided between St. Louis and other market centers in the belief that nearly equal net results would be obtained by the shipper, and yet in the transactions the net results to the shipper would range from a fraction to $2.00 a bale in favor of the shipments to St. Louis. In active trading in the height of the season St. Louis is usually slightly higher than Memphis, also slightly above New Orleans prices, and even then cotton bought at St. Louis is not high to the buyer, because it is nearer to factory centers.

It is safe to assert that in all cotton-producing territory in which freight rates are no higher to St. Louis than to other centers, St. Louis is the market to ship to, because the demand here is practically unlimited. The trade is unanimous in the statement that no matter how much the receipts of cotton are increased, the buying forces on mill and export account are ample and can be increased rapidly in proportion to the larger number of bales arriving.

A Few of the Buyers.

We are shown that the St. Louis market is well provided with permanent buyers. Although summer is the dullest period of the year, the St. Louis Cotton Exchange is filled with buyers. As members of the Exchange, we find Edward Baker, of Baker, Paton & Co., buyers and shippers to Liverpool and to other seaports; Mr. R. C. Bienenstock, of Bienenstock & Son, is also buyer and shipper on domestic and foreign account; also in the list of foreign and domestic buyers is the enterprising firm of Duncan, Joy & Co., of New York and St. Louis; Lesser-Goldman Cotton Company, buyers and shippers all over the world, are represented on the floor of the Exchange by Harry Lesser and J. D. Goldman; Mr. T. J. McLemore is buyer for the Home Cotton Mills, a local institution; Mr. John Monteith, of Little Rock, Ark., is a buying competitor on the Exchange; Mr. C. G. Mulligan is buying cotton and cotton linters for St. Louis manufacturing concerns, and is an important operator on the market; Mr. E. R. O'Donnell is buyer and dealer in cotton and a large trader in linters; Mr. R. F. Phillips is an active buyer and shipper and Vice-President of the Cotton Exchange; Mr. Geo. S. Tiffany and Dexter Tiffany, Jr., constitute a buying and shipping firm operating in Missouri and Oklahoma—they also do business at Malden, Mo., and at Newport, Ark.; Mr. A. Wiest is a buyer and shipper; and Mr. C. F. Woolfenden, of the firm of A. A. Paton & Co., St. Louis, Mo., and Dallas, Tex., is another of the important operators doing an immense business. Most of these people are always here, and in season the St. Louis market attracts many buyers who are only here from October until March.

The Views of the Secretary.

In several visits to the St. Louis Cotton Exchange we derived much information from Mr. P. H. Partridge, the able Secretary. He said: "St. Louis as a market for cotton has many advantages. Outside of a few freight discriminations that we have up before the Interstate Commerce Commission and hope to adjust, we have the entire advantage of location. Most of the Northern and Eastern mill buyers would rather locate in St. Louis than wander around looking for local bargains. For the purpose of legitimate loans on cotton the market is supplied with unlimited money. There is ample warehouse room and compress capacity. Shippers who wish to learn something about prompt service, absolute integrity and the highest order of skill and ability should ship to St. Louis, where the demand is always equal to every bale that can be brought to the city and sampled."

Railroad Members.

The transportation companies are very much interested in the expansion of the cotton trade of St. Louis and a number of the commercial agents and traffic officials are members of the Cotton Exchange, including Mr. C. Bourne, Jr., of the Lackawanna Lines; J. P. Brazil, of the Traders' Dispatch; R. L. DePew, of the M. & O.; K. B. Hannigan, of the Southern Railway; Geo. L. Kaeshoeffer, of the Wabash Railway; F. J. Lawler, of the Frisco; E. J. McConnell, of the International Mercantile Marine; L. M. Megginson, of the New York Central Line; F. D. Powell, Agent of the Western Maryland Railway; W. M. Porteous, Agent Canadian Pacific Railway; W. R. Stover and H. T. Young, Commercial Agents of the Erie Dispatch. All these active railroad men are allied to the St. Louis Cotton Exchange, because they consider St. Louis as being capable of handling a very much larger share of the cotton productions of the United States.

Unlimited Finance.

Speaking most conservatively of the St. Louis cotton market, although cotton eats up an awful lot of money, it is safe to assert that for the legitimate purpose of financing the cotton-growing, ginning and mercantile interests, for the purpose of carrying cotton through inactive periods and conditions, the St. Louis trade is in possession of unlimited capital. A bale of cotton can be held a year for fifty cents' cost of storage, and it only requires a tenth of a cent a pound to pay that charge. Insurance and interest are practically the same as elsewhere, and, all things considered, St. Louis is a splendid market for cotton interests to ship to.

For the Good of St. Louis.

Allied to the cotton trade, because they are interested in the welfare of St. Louis, are merchants and bankers. Of these are mentioned Walker Hill, President of the Mechanics' American National Bank, and E. M. Hubbard, of the Boatmen's Bank. Chas. Huttig, the late President of the Third National Bank, was a member until he died. Forrest Ferguson, of Ferguson-McKinney Dry Goods Co.; Elias Michael, of Rice-Stix & Co.; J. R. Curlie, of the Carleton Dry Goods Co.; and L. E. Anderson, Banker and Broker, are all members and supporters of the St. Louis cotton trade and to be

More Rye

Rye serves the double purpose of a cover crop or a grain crop. In either case it pays to use the right kind of fertilizer on it—the kind that contains enough Potash to balance the phosphate. The mixtures we have told you to use on wheat are suitable for rye, but the

POTASH

may be even higher, since rye uses more Potash than wheat.

Use from 200 to 400 pounds per acre of a fertilizer containing 6 to 8 per cent. of potash.

If your dealer does not carry potash salts, write us for prices stating amount wanted, and ask for free book on *"Fall Fertilizers."* It will show you how to save money and increase profits in your fertilizer purchases. **Potash Pays.**

Fertilize Intelligently —Drill Grain Perfectly

Here is the tool for fast economical fertilizing. Wastes nothing. This drill is equipped with the Disc Shoe, our special improved Double Run Grain Feed and Improved Star Fertilizer Feed. With this drill and without an additional part 70 different gradually increased quantities of Fertilizer can be sown.

Peoria Union Combined Drill

The Peoria makes every seed count. Equipped with our famous Disc Shoe Furrow Opener. Combines advantages of the single disc for cutting trash and penetrating hard ground, with the shoe for forming furrow and depositing the seed. The Disc Shoe Furrow Opener is the only one that sows every seed at an exact, even depth, in a packed furrow. No seed touches the disc and no dirt falls back into the furrow until after the seed is deposited. No practical, progressive farmer can fail to see the many money-making and money-saving advantages of this wonderful Disc Shoe Furrow Opener.

There are also many other advantages in Peoria Drills, each one just as superior as the Disc Shoe Furrow Opener. Send us your name and address on a postal now for catalogue and all details of construction. Let us prove to you that it will pay you to discard your present method, even a new drill, in order to buy and use the Peoria Union Combined. Will you spend a penny for a postal now to get all the facts? Ask for prices on the size drill you want.

relied upon in extending the influence of the market.

The Commission Interest.

In our study of the St. Louis cotton market we had the pleasure of meeting Mr. J. H. Allen, head of the Allen-West Commission Company. Mr. Allen established himself in the commission business for the sale of cotton at Mobile, Ala., forty-eight years ago, afterwards conducting business at New Orleans and St. Louis. What Mr. Allen best thinks of the St. Louis market is shown by his acts that speak louder than words. His headquarters are at St. Louis, and their only branch is a feeder of the St. Louis market at Little Rock, Ark. For the Allen-West Commission Company to show samples of ten thousand bales on their office tables is a part of their ordinary business. Mr. E. P. Horner, of the Allen-West Company, is one of the most active members of the trade.

The Senter Commission Company.

Strictly in the commission business we find the Senter Commission Company. This is a firm that has handled cotton in the interest of the shipper these many years. Although claiming to be conservative, none are more enterprising in assisting the non-speculative elements of the business. The Senter Commission Company is represented in the Cotton Exchange by C. P. Senter and W. B. Keeble, and by them many good sales are made.

Napoleon Hill Commission Company.

This is another first-class commission house, well and favorably known throughout the cotton trade, also strictly on commission basis and opposed to artificial speculations. Mr. T. E. Upshaw, of this firm, is President of the Cotton Exchange. Mr. R. W. Upshaw is the Secretary and Treasurer of this firm. They state that the St. Louis market cannot be overstocked, for the reason that cotton can be sold and shipped faster than it can be assembled. It is especially an independent market, on which cotton sells on its grade and merits.

A Notable Sale.

While investigating the cotton market during the dullest season, several sales of 300 to 1,000 bales were made. One notable sale of a train-load of cotton, valued at $100,000, was made July 21st. It was purchased at the St. Louis Cotton Exchange by Adam Wiest for R. F. Phillips & Co. The sale was made by the Senter Commission Company. The cargo was started on its way to the New England mills via the fast freight (Red) line. The shipment contained 1,178 bales. The bulk was mainly middling cotton. This grade was then quoted at 12 5-16 cents a pound. Allen-West Commission Company sold one lot of 3,500 bales in the active season.

Summary of Conditions.

As a market representing the nearest cut from producer to consumer there are within reach not less than five million bales of cotton, which it is to the interest of the producing elements to ship to St. Louis. The market is well equipped financially to carry the business; has unsurpassed railroad facilities, in and out; has compress power and storage capacity beyond possible requirements, and buying demands far in excess of usual cotton arrivals and shipments.

The Best Apple Display.

At Cleveland, Ohio, August 7th, the Department of Agriculture of Ontario, Canada, was awarded the President's cup for the best display at the Apple Show conducted in connection with the International Apple Shippers' Association. The next convention will be held in Boston. The advertising campaign to be conducted by the association to educate people to eat more apples was explained to the delegates by U. Grant Border. The revenue for the campaign is to be gained through the sales of stamps to the shippers.

THE GOOD-ROADS MOVEMENT.

Missouri Has Set a Magnificent Example That Will Cause a National Movement of Lasting Value

The Good-roads Movement that resulted in a state-wide road-working demonstration headed by the Governor had a number of theatrical features, but it has awakened the people to the good-roads movement in all the states as nothing else could have done.

The two-days' work actually done amounted to the usual two-day road-tax work accomplished in any state, and that means very little in the shape of permanent improvement. The five dollars that the editor of The National Farmer and Stock Grower paid to the state road fund during the month of July, if properly used in the scientific construction of roads, will be worth five days of such work as he could have done by handling a shovel as his share of the two-day movement.

We are proud of the example set by the Governor and the other salaried public officials, but we desire to have credit for the five dollars of subscription money that was taken from the treasury of The National Farmer and Stock Grower and diverted from the expense money of the office to the good roads fund.

Road building is as much a science as house building, and it must be conducted upon a substantial foundation in a businesslike manner. The enthusiasm is not misplaced. We are in favor of good roads. It is the best investment a state can make, provided that every dollar collected can buy a dollar's worth of work on the road. In the meantime, the example of the state of Missouri in the earnestness with which the road problem has been handled is worth many millions to the people of the United States.

Insuring the Small Fruit Supply.

The present season has been a very disappointing one to many raisers of small fruit. The rains in March and April were fairly good in some localities, but fell off or were wanting in May. When the small fruit was ready to pick it had dried up or shrunk to such a degree that it brought a very small price.

The strawberries this season have been a great disappointment to many of the growers that depended on their extensive fields for a good revenue. Due to insufficient rain, the strawberries arriving in the markets of our great Western cities were seedy and hard. They would keep well enough, but the buyers were not willing to give much for them. The objections stated by the consuming buyers were quickly transmitted to the commission men, who were thus made willing to let go the fruit they handled at a very low price. The remittances to the producers were therefore very small for two reasons—one, because the crop was short; and the other, because what berries there were did not bring a good price.

The key to the whole situation lay in the one word "water." In the humid sections of the country people are so wedded to the idea that rainfall is sufficient that they do not take measures to insure a water supply as they do in an arid region.

Yet it is immeasurably easier to provide irrigation in a humid climate than in a dry climate. The supply of water is greater and more certain and the amount required to be delivered artificially is very much less than it is in an arid section. But in spite of these facts we see season after season pass when the consumers have largely to go without small fruits and the producers to go without the revenues that a fruit crop would give them.

In some of the other countries of the world, where rainfall is good, there is much irrigation as a crop insurance. For the same reason we should at least give the small fruit crop that kind of an insurance. The small fruit crop is mentioned because it generally occupies but a small area, and the smaller the area the easier it is to provide water for it.

The writer has in mind a few strawberry fields that are irrigated. Two of these are at different Experiment Stations, both in humid states. He has seen these fields red with fine berries when non-irrigated strawberry fields had on them but few half-dried berries. Yet the irrigating had cost little. In one case it was done by a windmill, and in another it was done more easily, the field lying lower than an adjoining lake from which the land had been reclaimed.

But some small fruit needs irrigating or watering every season. The writer has in mind a blackberry patch on a slope that has always borne a good crop, but has never failed to dry up just before picking time. It was a mistake to plant a blackberry patch in such a location, as the slope of the ground makes the water run off too easily, and water, if applied, would run off rather than sink in.

Where Could We Store It?

Mr. Ives has a mind that delights in facts. One evening he laid down the paper, was silent for a moment, and then said:

"That's odd."

"What is it?" inquired his wife.

"Why, here is a man who says that it would take twelve million years to pump the sea dry at the rate of a thousand gallons a second."

Mrs. Ives sat thinking the matter over. Finally she said:

"Why, Henry, where would they put all the water?"—Lippincott's.

ZENOLEUM DESTROYED.

Under insecticide act of 1910 seven cases of zenoleum shipped by the Zenner Disinfectant Company, of Detroit, Mich., were condemned by the government for being misbranded. The company made no defense, and a default was entered and the goods were destroyed. The case was before the District Court of the United States, December 10th, 1912.

CORN HARVESTER with Binder attachment cuts and throws in piles on harvester or winrow. Man and horse cuts and shocks equal with a Corn Binder. Sold in every state. Price $20.00. W. H. BUXTON, of Johnstown, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25.00 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address,
NEW PROCESS MFG. CO., SALINA, KANSAS.

ST. LOUIS MARKET FOR OATS.

Very Near Steady Prices With Those Quoted at the Close of the Month Previous.

The market for oats has for three months shown but little change in values at the close of each month. In regard to cash oats at St. Louis, the prices on June 30th were 40 to 41 cents a bushel; on July 31st, 39 to 41¼ cents; and on August 30th the sales were made at 41 to 41½ cents.

At Chicago, on the market for future delivery, in July 31st the September option was quoted at 11 cents, and on August 30th the price was the same.

At Chicago, on July 31st, the December oats quotation was 43⅛ cents, and on August 30th the price was 43⅞ cents.

There now remains to be considered the option for May, 1914, delivery, which on July 31st was quoted at 45¾ cents, and on August 30th the closing figure was 41 cents a bushel. Oats in market are not selling high, but last year on August 30th cash oats sold at 32 cents a bushel.

In regard to St. Louis as a market for oats it is well to remark that although far behind Chicago in receipts, St. Louis is in advance of Minneapolis, Duluth, Omaha, Kansas City, Milwaukee, Cleveland, Cincinnati and Indianapolis. Receipts last year at St. Louis were 21,529,690 bushels.

St. Louis as a Fruit Market.

With about a million population within ten miles of the St. Louis Court House there is naturally a large consumption of fruit, and then there is the wholesale market, which is engaged in receiving, storing and reshipping to other markets.

In order to enable our readers to form an idea of current values at wholesale on arrival we quote the market on the last day of August, as follows: Apples (quote by the barrel)—Small and poor (all varieties) at $1.00 to $1.50; Welthy at $1.50 to $2.25; Domino and Rambo at $1.25 to $1.75; Shackleford at $1.50 to $2.00; real fancy do., $2.10 to $2.25; Jonathan at $1.75 to $3.00; Maidenblush at $1.50 to $2.25 for small and poor colored to $2.50 and $2.75 for medium, and $3.25 for fancy; Wolf River at $2.00 to $3.00. Bushel baskets and boxes at 40 cents to $1.00. Bulk Michigan Duchess selling at $2.00 to $2.25 per barrel measure, delivered. Sales: Rail receipts—One-half car bulk Michigan Duchess at $2.25 per barrel measure, delivered; twenty-seven barrels Michigan sweet at $1.75 to $2.00; fifteen barrels Northern Spy at $1.40; ten barrels Shackleford at $2.15. River receipts: Sixteen barrels Jonathan at $1.75; ten barrels Jonathan at $2.05; ten barrels Shackleford at $1.65; fifteen barrels Shackleford at $2.00; eighty barrels Shackleford at $2.11; sixty-six barrels Shackleford at $2.25, delivered; six barrels slack Ladyblush at $1.75.

Crab Apples.—Nearby at $1.00 to $1.50 per barrel; choice Northern at $2.50 to $3.00 per barrel—lot Michigan bushel baskets Siberian sold at $1.25.

Peaches.—Heavy receipts of home-grown by wagons and nearby shipments also large. Home-grown half-bushel baskets sold at 15 to 20 cents for common to fair, up to 35 and 40 cents for choice to fancy Elbertas, and bushel boxes at 25 to 50 cents.

Pears.—Alabama hampers Keifer and sand pears slow sale at 50 to 60 cents. Michigan Clapp's Favorite at $3.50 per barrel, delivered, for choice; lot of sixteen barrels culls sold at $2.00; and Michigan Bose at $3.00 per barrel. Illinois Duchess at $2.25 per barrel, and do. Seckel at $1.25 per bushel basket; and home-grown do. at 35 and 40 cents per half-bushel basket.

Plums.—New York bushel baskets Lombards lower and slow at 75 cents; and German prunes at $1.00 to $1.25, delivered; Michigan bushel baskets German prunes at $1.25, delivered; Damsons in large offering, but steady at 35 to 50 cents per chip basket and two cents per pound by weight—sale five barrels and ten baskets at two cents; home-grown red varieties at 30 to 35 cents per half-bushel basket.

Grapes.—Home-grown plentiful and slow at 20 to 25 cents for jelly to 40 cents for table stock per chip basket.

Watermelons.—Missouri melons dull and lower to sell—not wanted, seemingly, by even the cheapest trade. Car lots Missouri melons on track at from $40 to $80. Sales: One car Iowa melons at $220, track; one load, 25-pound do. at 75 cents per 100 pounds, delivered; one load do. at 70 cents, delivered; and two loads do. at 65 cents, delivered; only sales of Missouri melons reported were two cars at $60 and one car at $65, on track.

Cantaloupes.—Market weak and lower on average offerings of Western melons, under excessive offerings. Sales: Two cars Colorado Rocky Fords at $1.25, delivered, for standards and 60 cents for Osage flats; one car do., delivered, at $1.00 to $1.25 for standards and 50 cents for flats; one car do. (some soft), at $1.00 for standards; 75 cents for Jumbo; and 35 cents for flats; clean-up of car do. at 90 cents and $1.00 for standard and 50 to 75 cents for pony; part car New Mexican standard at $1.25, delivered; half car do. flat white at 50 cents, delivered; and half car Colorado Pink Meat flats at 60 cents, delivered; Poag baskets sold at 25 cents; home-grown sold at 35 to 50 cents per bushel, loose.

Sorghum For Silage.

A correspondent asks how it would do to put up sorghum with corn for silage.

This takes a first-rate combination, and it is better if the corn and sorghum be planted separately, in alternate rows. This is quite important, as the sorghum will not mature at the same time as the corn. If our correspondent has his two crops planted in different fields, I should wait until the sorghum was in the right stage and then mix the two when filling the silo. The best time to cut the sorghum is when the seed begins to harden. Some claim that this combination does not keep well. I find if the sorghum and corn are cut at the proper stage they not only keep well, but make a very palatable feed.

Government Corn Grades.

The farmer will understand more about the market view of corn when he reads over the requirements of grades one to six, as proposed by the United States Department of Agriculture. It will be news to farmers to read about the difference there can be in the matter of moisture, which ranges from 14 per cent. in No. 1 to 23 per cent. in No. 6. Our readers will find the statement in another column regarding grades of corn to be very interesting.

Silo Owners REMEMBER that proper cutting and filling are as important as the Silo itself.
The Diok Blizzard Ensilage Cutter, with very large capacity, works steadily, takes whatever is fed to it without a hitch, and outlasts any machine of its kind. It is the most profitable machine to buy and is fully guaranteed.

DUNLAP'S MULE-FOOT HOGS.

Mr. John H. Dunlap, Williamsport, Ohio, owner of the Ohio Blue Ribbon Herd, was not affected by the recent disastrous flood in Ohio which caused so much loss of life and property. He reports a big demand for mule-foot hogs. While this breed has not been before the public as long as the other breeds, it has been in existence for centuries, and is very prepotent as well as being able to resist disease. Mr. Dunlap reports tests made in many different states with stock from his herd, in which the mule-foot lived and the other hogs were lost. Mr. Dunlap has always been able to sell all the good mule-foots he can raise. He now has over sixty brood sows on his farms that farrow twice a year. These sows were selected on account of their size, hardiness and because they have farrowed and raised large litters. Many of the spring pigs are now weaned and are being shipped nearly every day all over the land to form new herds. There are ten big prize-winning herd boars in the Ohio Blue Ribbon Herd, and anyone wanting to make a start with this great breed which Mr. Dunlap has so successfully brought to the notice of the swine breeders of the country can do so without getting inbred stock. No other breeder in the land has made such a record at the State Fairs as has Mr. Dunlap, who has won nearly every prize he has ever competed for in the show ring. Just now Mr. Dunlap has over 350 Mule-foots of all ages to select from.—(Advt.)

Latest Crop Estimates.

Relative to crops, latest reports (September 1st) indicate a yield of 14,000,000 bales of cotton; 2,500,000,000 bushels of corn; 1,104,000,000 bushels of oats; 744,000,000 bushels of wheat; 36,000,000 bushels of rye; 339,000,000 bushels of potatoes; 900,000,000 pounds of tobacco; 20,000,000 bushels of flaxseed; 64,000,000 tons of hay; and 27,000,000 bushels of rice; all of an estimated value of $4,755,000,000.

Drill grain perfectly. Read the advertisement of the Peoria Drill and Seeder Company on page 3.

BREEDING ARMY REMOUNTS.

The Progress in Producing Cavalry Horses Upon the Government Plan.

The Bureau of Animal Industry has received reports from its officers in charge of the breeding of army remounts in co-operation with the War Department, which show that the government's plan is very popular with the owners of mares. At the close of business on August 16th, 1913, forty-one stallions were in service. These stallions have covered 1,452 mares during the season, an average of slightly over thirty-five mares per stallion. Twenty-seven of the stallions were five years old or over, and covered 1,097 mares, an average of a little over 40; ten were four-year-olds and covered 292 mares, an average of better than 29 per head; four were three-year-olds and covered 53 mares, an average of more than 13.

The number of mares covered in Vermont and New Hampshire was 241, an average of over 34 for seven stallions, including three four-year-olds and one three-year-old; 583 mares were bred in Virginia, an average of over 31 for eighteen stallions, including four four-year-olds and three three-year-olds; 208 mares were bred in West Virginia, an average of 52 for four stallions, including one four-year-old; 376 mares were bred in Kentucky, an average of better than 37 for ten stallions, including one four-year-old; in Tennessee a mature stallion and a four-year-old covered 22 mares each.

The number of mares covered by mature stallions of different breeds were as follows: Three Morgans averaged 45 mares; ten Thoroughbreds averaged 38 mares; eight Standard-breds averaged 40 mares; and six saddle stallions averaged 42 mares. All ages by breeds are as follows: Seven Morgans (including three four-year-olds and one three-year-old) averaged 34 mares; fifteen Thoroughbreds (including three four-year-olds and two three-year-olds) averaged 32 mares; ten Standard-breds (including two four-year-olds) averaged 32 mares, and nine saddle stallions (including two four-year-olds and one three-year-old) averaged 37 mares.

In placing these stallions, care was taken to select communities in which there was a scarcity of good stallions. Therefore, the mares bred during the past season are, to a great extent, mares which would probably not have been bred in the absence of government encouragement.

The number of mares bred in 1913 will be increased somewhat. In New England, breeding continues until October 1, and in Virginia the fall season is commonly used. Both conditions will operate to the advantage of the remount breeding work.

The Department is not able to draw any deductions as to the advantage of one breed above another. Local preferences were considered in placing stallions and no breeds placed in a community which were not wanted. Regardless of breed or locality, however, the desire of farmers to breed their horses to good-sized stallions is noticeable. In almost every case where stallions have had a comparatively good season it is because they were somewhat undersized.

Congress has provided for the continuation of the remount breeding work during the current fiscal year but no considerable extension will be possible and no new breeding districts will be organized at present.

Overgrazed Stock Ranges Can Come Back.

The improved condition of the national forest range after regulated grazing is pointed to by experts of the Department of Agriculture as a demonstration that areas which have been severely damaged through overstocking by sheep and cattle can be brought back to their former carrying power through a system of sufficiently intelligent use.

When the government took charge of the live stock ranges within the national forests some of them were so badly overgrazed and otherwise injured from reckless handling of the stock that their grazing value appeared to have been almost entirely destroyed. Many of these ranges, however, have been restored and made as valuable as ever. On several of the forests results have more than justified the expectations and the range is in better condition than it ever was.

An example of this improvement is cited in the Nebo National Forest, Utah. In 1903, when that forest was created, the ranges within the forest boundaries were found to be badly overgrazed and trampled because there was a lack of any control or supervision over the areas. One of the ranges was at that time estimated to be capable of carrying only 3,000 head of cattle. Now, through conservative management and judicious distribution of the cattle over the ranges and improvements in water conditions, the carrying capacity of the range has been increased until in the present grazing season nearly 8,000 head of cattle are using this particular area and forest officers feel that a few hundred head more can be safely grazed there without injury.

St. Louis Hog Prices.

To follow the article published on page 4 we quote the hog market report from the National Live Stock Reporter of August 30th, as follows:

"A load of nice light-weight hogs that weighed 158 pounds sold at $9.05 per 100 pounds, which was the top, and they were the only hogs in the West to sell above $9.00, as that was the top in Chicago, and none of the up-river markets were able to get anywhere near that price. The top in Kansas City was $8.50, or 55 cents under the local top. The local bulk was far higher than the bulk on any of the other markets.

"Hogs with quality of light to medium weight sold at $8.85 and upwards, and most of them went to the shippers and city butchers, while the packers paid $8.40 to $8.80 for fair to good mixed and heavy hogs, and $7.65 to $8.00 for the rough throw-out packers. It was a very dull market for all hogs that only the packers would purchase, as they were very bearish and hammered the market hard.

"Pigs that were good sold at $8.25 to $8.60; medium grades went at $7.50 to $8.10; fair at $7.00 to $7.50; and common, little, no-account ones at $5.00 to $6.75—all quotations being at the price stated per 100 pounds."

Dairy Special on the "M. & O."

Farmers and dairymen along the Mobile and Ohio Railroad in Southern Illinois are interested in the announcement of the officers of that road that a special dairy instruction car will be operated, beginning September 1. The object is to improve and develop the dairy industry in the Mobile and Ohio territory. The car will be equipped with a model farm dairy, together with charts, and a corps of expert dairymen will give lectures at each stop.

The itinerary will include thirty-three points in Missouri, Kentucky, Tennessee and Illinois, and one day will be devoted to lectures in each town where a stop is made.

Please study the advertisement of the Peoria Drill and Seeder Company, 2430 North Perry street, Peoria, Ill.

Look Out

For Worms This Month

I'll Stop Your Worm Losses I'll Prove It Before You Pay

Don't let worms breed **contagious diseases** among your hogs this year. Don't let them kill off the young pigs and rob you of your season's profits. You can **prevent it** if you will just take "a stitch in time." **Now** is the time when worms begin to get in their **deadly** work. **Now** they are breeding, multiplying by the millions in the stomach and intestines, and if you don't get the best of them, they will surely get the best of you. Let me show you how. I'll get rid of stomach and free intestinal worms in your hogs, sheep, horses and cattle and prove it to your satisfaction (not mine) before you pay me a cent. I'll do it with

Beware of Imitations — **SAL-VET** — **Look at the Name Carefully**

The Great Worm Destroyer and Conditioner

I've done it for thousands and in addition they write me they never had stock thrive better, look better and bring them such profitable returns. Here is my offer to you.

Send No Money—Just the Coupon

Simply fill in the coupon, tell me how many head of hogs, sheep, horses and cattle you have. I will then ship you enough Sal-Vet to last them 60 days. You pay the small freight charge when it arrives—put it where all your stock can get free access to it—**and they will doctor themselves.** They eat it as they do salt—just as they need it, and at the end of the 60 days if you don't feel **satisfied,** write me and I'll cancel the charge. I take your word as final—I let you act as judge of its merit—I put everything up to you. How can you risk loss—how can you let your stock drag along when they should be thriving, growing into profit when such a fair, open offer like this is put at your disposal? You have all to gain—nothing to risk. Fill out and mail the coupon **now.** Don't put it off—lest you forget. Read the letters above.

Sidney R. Feil, Pres.—*The S. R. FEIL CO.*—Dept. NF&SG Cleveland, Ohio

Prices: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12

60-day trial shipments based on 1-lb. of "Sal-Vet" for each hog or sheep, and 4-lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

(37) No orders filled for less than 40 lbs. on 60 day trial offer.

I have been in the hog business for 30 years and have tried every known remedy for hogs, but have never found anything equal to your Sal-Vet. It certainly does the work and is easy to feed. I feed it to little pigs, boars, pregnant sows and find it O. K. I will never be without Sal-Vet.

C. F. MARSHALL & SON,
Per G. F. M. Monroe, Ia.

"I had a lot of sick hogs and I lost five of them. I began feeding them Sal-Vet, my losses stopped and the hogs soon got into a fine, healthy condition.

V. P. UNDERWOOD,
R. D. No. 1, Roachdale, Ind.

While I cannot say positively Sal-Vet kept my hogs from having Cholera, I had no such sickness while my neighbors almost without exception lost hogs from Cholera. I certainly have great faith in Sal-Vet and it is all and more than you claim for it.

J. C. CONOVER,
Chrisman, Ill.

I used your Sal-Vet regularly while feeding a bunch of fattening hogs and can say it is just the article. It made my hogs double their weight in 50 days. It is a great conditioner and worm destroyer—E. E. SHULL, LaCynge.

Sal-Vet always comes in original "Trade-Mark" Packages. Never sold loose in bulk or by the pound. Look for the "Sal-Vet" trade-mark.

Sidney R. Feil, Pres. The S. R. Feil Co., Cleveland, O.
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days and at that time pay for it, if it does what you claim. If it does not, you are to cancel the charge.

LIMITATIONS OF DRAINAGE.

Don't Change the Water Table on Old Trees—Shallow Roots Resist No Drouth.

Recently a farmer said to the writer: "Every acre of this farm is tiled." As the farm was a very big one and had on it much high land, it impressed the writer as being over-drained in spots. The remark of the owner represented the tendency to go to extremes.

Much good has been done by drainage, but some harm has also been done. Without doubt, the good far outweighs the bad, but it is not necessary to have any bad effects. There are certainly places on some farms that should not be drained at all.

An old apple orchard, if still bearing profitable crops, should not be drained, unless the "fall" is so slight that the water drawn off will will be small. The change in the water level under the trees will probably do injury.

A mature forest should not be drained, for its trees have accustomed themselves to a certain condition of moisture and cannot live without the usual water supply. If the ground has been and is wet, the trees, if of kinds that require fairly dry land, will be found to have formed there near the surface of the ground. A sudden lowering of the water table will leave the roots high and dry, and the trees will perish in the first protracted drouth.

The writer was riding on the train past extensive corn fields. It was a dry time in late summer. A passenger said to him: "Look at that corn on the level and near the brook! It is all dried up, while all the corn on higher ground is still green!" The reason was that during the early part of the season the corn on the low land had formed its roots near the surface of the ground to avoid the water immediately below it. It was so shallow-rooted that when the stream shrank with the coming of the protracted dry spell, the roots were in ground so dry that moisture could not be supplied sufficient to keep the corn alive.

Vineyards that have been established on undrained ground should not be drained, if they are doing well under the conditions as they are. This is particularly the case in localities where the winter is cold. In drained soil the frost strikes deeper than in undrained soil, especially during the first few years of drainage when the soil above the drains is very loose. Deep and hard freezing often kills the roots of grapevines.

The above truths have been brought out by the drainage work in many towns and cities where extensive drainage operations have been carried on for the laying of sewers, paving of streets and other like work. The loss of old trees has been very great.

But with young orchards and on land where there are only young trees growing, drainage operations can be carried on to advantage. The few roots being formed will follow the lowering water table and get good instead of harm. The deeper the roots strike the better, for the depth protects them from freezing in the winter and from drying out in the summer drouths.

Tire Prices Down

Now the Costliest Tires—No-Rim-Cut Tires Cost You No More Than Others

Goodyear No-Rim-Cut tires used to cost one-fifth more than other standard tires. The reasons are told below.

These tires, despite that extra cost, came to outsell any other. As our output grew the cost came down.

Now you pay no more for No-Rim-Cut tires than for any other standard tire. Yet notice what you get.

Rim-Cutting Ended

You save in these tires all the ruin of rim-cutting. And that's an enormous item.

We had public accountants lately gather statistics. They examined thousands of ruined clincher tires—the old-type hooked-base tires. And they found that 31.8 per cent had been discarded for rim-cutting only.

That's almost one in three.

No-Rim-Cut tires, made by a costly method which we control, end that loss completely. That we guarantee.

Save Blow-Outs

We give these tires the "On-Air Cure." That is, they are final-vulcanized on air bags shaped like inner tubes.

That's to save wrinkling the fabric.

All other tires are vulcanized on iron cores alone. The fabric often buckles. And that buckled fabric leads to countless blow-outs.

This "On-Air Cure," which we alone employ, adds to our tire cost $1,500 per day.

Save Loose Treads

We use another costly method to prevent tread separation. The rights to it cost us $50,000.

Millions of dollars have been lost to tire users through the loosening of the treads. No other tire in the world employs the effective method we use to combat it.

Yet No Extra Price

You get all these savings in No-Rim-Cut tires. All these features used by no one else. Yet no other standard tire today costs less than No-Rim-Cut tires.

The reasons are mammoth output, new factories, new equipment. In one item alone—in overhead cost—we have saved 24 per cent.

Another reason is that we keep our profits within 8½ per cent.

Judge for yourself if tires lacking these features are worth the Goodyear price.

Our dealers are everywhere.

Capture 751 Live Foxes.

From Edmonton, Alta, Canada, on August 3d, it was reported that seven hundred and fifty-one live foxes, valued at more than $600,000, have been trapped or dug out of their nests in the fur district north of Edmonton, since the beginning of the season. The highest price paid for a pair of black foxes is $20,000. The animals were bought by C. J. Fleming, of St. John, N. B., from a half-breed Indian trapper at Lac la Biche. T. J. McMann, of Edmonton, recently sold fifty-one fox whelps, all colors, for $26,000, to James A. Kane, of Brooklyn, N. Y., who has fox farms in New York and Pennsylvania. The exportation of live foxes has become so active in Northern Alberta that Benjamin Lawton, Chief Game Guardian, has been requested by the provincial government to recommend a closed season, the same as there is for other fur-bearing animals.

A Record Texas Train-load.

From Austin, Tex., on August 3d it was reported that a great freight train had moved from the Panhandle of Texas. This train consisted of ninety-eight loaded freight cars, and, what was the more remarkable, ninety-five of these cars were loaded with cantaloupes, there being a total of 1,277,060 melons in the train-load. Of the remaining three cars, one was loaded with wool, one with cattle and the other with merchandise. This long train was pulled by one engine from Dalhart, Tex., to Liberal, Kas., 111 miles, in five hours, including stops and delays. The track is almost straight and nearly level the entire distance.

MOST OUT OF FERTILIZERS.

How to Get It is to Manure Each Field When It is in an Arable Condition.

Recently the writer was walking over the farm of a very successful stockman, when the latter said: "Look at this field of grass that has been top-dressed for years; see what a remarkable growth of grass. You know, some of those Experiment Station men were out here and told me I ought to put all my manure into the cultivated crops to get the most out of it; but I showed them this field, and they hadn't a word to say."

But the Experiment Station men were right and this farmer was wrong. Top-dressing a field gives good results, but a large part of the manure is wasted, for all that. Only under rare conditions would the manure be washed into the soil before the sun and the rain can get at it. On some farms liquid manure is saved, and where that kind is available it is the right kind to apply as a top dressing, as it gets at once below the surface, out of the reach of wind and sun.

One of the things that science is teaching us is, that the nitrogen in the manure is constantly escaping in the form of a gas. The smell of ammonia in fermenting manure is but one of the means we have of determining this. When the manure is spread out on the land and allowed to lie for months in the summer it is continually sending out this same gas, but in such small quantities at any one time that it is not appreciated; but in the total it amounts to a big figure.

The nitrogen is the most volatile element in the manure, and on many soils it is the most important element. Therefore its loss is a serious matter. Suppose, for instance, that the field being top-dressed has a good supply of potash and of phosphorus, and that the application of the top dressing is for the purpose of adding nitrogen to the soil. The manure is spread on the field and allowed to dry and bake for months before good rains come. When the residue is washed into the soil it consists mostly of the things the soil does not need, for the other element—the important nitrogen—has gone up into the air.

If manure is to be spread and left on the fields, it should be in winter, when the rays of the sun are weakest and the temperature is so low that evaporation is at a minimum. Then the rains and the melting snows may carry much more of the nitrogen into the soil.

The rotation of crops is the friend of manure conservation, for by it is made possible the manuring of each field when it is in an arable condition. Then the manure may be spread out by the help of a manure spreader and plowed under, cultivated under, or even harrowed under, if it is sufficiently fine.

One thing should be kept in mind, and that is, that the manure should be gotten under the surface of the soil at the earliest possible moment. It can rot just as fast in the soil as above it.

Poultry manure especially loses ammonia or nitrogen very fast, and more than most kinds needs to be placed in the ground soon after it is made.

Commercial fertilizers as well as barn-yard manure need to be worked into the soil, for some of their constituents will not dissolve when on the surface of the ground. Some of these manurial elements are only set free when, in the soil, they come into contact with acids produced by decaying vegetation.

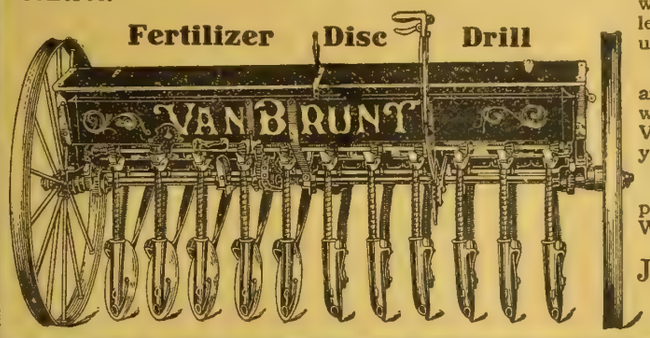
VAN BRUNT RESULTS

Fertilize as You Plant the Seed

Investigate Van Brunt Drill thoroughly before buying any drill. It has money-making features which you will surely appreciate.

It is different than others you have known, with (1) closed Forward Delivery Disc Boot, (2) Adjustable Gate Feeds, (3) Special Fertilizer Force Feed, all grain and fertilizer distributed at uniform depth with quantities under absolute control.

Fertilizer Disc Drill



What to Look Out For

Even Seeding—The Van Brunt adjustable gate feed guarantees an even flow of any kind of seed without bunching or damaging a single kernel.

Correct Planting—Disc openers will not choke or clog in any ground that can be seeded. Seed falls into the furrow when it is wide open; it beats the dirt.

Light Draft—These drills are light weight, but strong. Trussed hoppers, full length axles and wheel bearings extending under frame, make the light-draft drill.

Durability—Disc bearings are guaranteed for the life of the drill. Any that wear out, are replaced free. All parts of Van Brunt Drills show the result of fifty years experience in drill making.

Our new free drill book tells the complete story of Van Brunt superiority. Write and ask for book, No. 7 VB

Agriculture in Country Schools.

The teaching of agriculture must come in all schools, in city and country, but in the country it must come because it is one of the prime necessities.

There is a complaint that the teachers of country schools are generally girls who are from the city and know little or nothing of farm life.

That is, indeed, an obstacle to the right teaching of agriculture, but it is not one that cannot be overcome. In fact, it is being overcome now in some of the agricultural country schools, or country schools in which a great deal of interest is taken in agricultural instruction.

The easiest way to overcome this obstacle is to have the school under the supervision of an agricultural expert, who visits it once in a while and lays out the course in text-book agriculture. This is for the purpose of teaching some of the fundamental principles, such as the necessity for certain kinds of plant food to be present in all soils and the names of these necessary elements. Then the expert comes around once in a while to teach corn judging or some other important practice in farm work. Such experts are not generally, as yet, paid by the schools, but they will be in time. Most of them have given their work freely to the cause of education.

In some counties, Superintendents of Schools or their assistants are such experts. There is one county in which the County Superintendent and his assistants have made much of agricultural instruction and have accomplished a great deal in practical instruction in agriculture. The children have had their gardens, which have been carried on according to scientific principles.

Of course, here and there is found a country school big enough to have a well-paid man as teacher, who has himself had experience in farming and who also made a study of scientific agriculture. Such a man is in the mind of the writer. This teacher has a large school, which he led in agricultural work till the school had a state-wide reputation. In fact, the reputation gained resulted in the school losing the teacher, for he was elected County Superintendent, very largely on the strength of the splendid work he had done in teaching practical agriculture in his little country school.

Here and there women teachers in country schools have taken up the study of agriculture and introduced it into their school work. The most successful of these have been women brought up on farms. Remaining in the same schools, living in their own farm homes, which were on farms renewed by the magic of scientific agriculture, they have themselves become real experts in farming and understand the business thoroughly. These women are the hope of the one-room or two-room country schools. Well is it for the districts schools if the people of the districts where they are teaching appreciate their work enough to increase their salaries to a point where they can afford to stay. These are the teachers most to be sought for.

But the best hope comes in the way of the consolidated school which can afford to hire an agricultural expert as a teacher of agriculture and superintendent of agricultural operations carried on by the students

Not Enough Alfalfa.

There is not one acre of alfalfa in the United States where there ought to be a hundred. The first alfalfa movement of any importance was conducted by Coburn, of Kansas; the second by The National Farmer and Stock Grower. When alfalfa was just beginning to be known we sold Coburn's Book of Alfalfa, a sample pound of pure alfalfa seed and a subscription to The National Farmer and Stock Grower. We thus started alfalfa experiments on many thousand farms.

Grain of European Russia.

A cablegram dated July 23, 1913, from the International Institute of Agriculture, Rome, Italy, which has been received by the United States Department of Agriculture, gives the following estimates for European Russian production of spring wheat, 511,101,000 bushels; all barley, 530,287,000 bushels; all oats, 1,029,623,000 bushels. The estimated production, compared with last year, is, for all wheat, 26.5 per cent. more; for all barley, 16.3 per cent. more; and for all oats, 5.8 per cent. more.

Cupid as a Menace.

"Spooning couples out driving behind old Dobbin are becoming a menace to motor travel. Drivers of cars report that the country roads are unsafe, particularly on moonlight nights."—Clyde Times.

Three thousand men are at work on the grounds of the Panama-Pacific Exposition.

DRY, HOT WEATHER

has no horrors for the Spalding Deep Tilling Machine user. The 12 to 16 inches deep, well pulverized and mixed seed-bed *absorbs* all moisture falling on it and *stores* it for the crop to use when needed.

Men *in your neighborhood* know and use Spalding Deep Tillers on *your kind of land.* See what they say. Write us.

St. Louis a Grain-market Center.

Considerable increase in the grain-market transactions of St. Louis of recent years is on record. The principal increase, however, is in wheat, there being a nice increase of thirteen million bushels in 1913 over the previous year. A casual examination of the figures representing actual sales at all markets indicates that many more shippers of grain will find it to their advantage to send their grain to this market. The selling territory of St. Louis as a grain market is large and populous and extends southeast and northeast to the seaboard, in addition to the requirements of a great milling center.

The St. Louis Cotton Market.

An article on pages 2 and 3 relates to the St. Louis cotton market, and in addition to it we can say that St. Louis capital and St. Louis operators are handling large consignments of cotton that reach the final factory destination without coming to St. Louis. At the same time it is well to observe that the location of the center of United States cotton production is in Mississippi and is distinctly tributary to St.Louis as a market and distributing center. St. Louis receipts of cotton could be increased a million bales a year to the advantage of the shippers of the cotton.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

We Are Strenuously Opposed to the Admission Free of Duty of Any Foreign Farm Products While Duties Remain on Any Foreign Goods.

Congress is still in session legislating on tariff matters against every interest the farmer has. We therefore consider the most important item we can publish at the present day to be our industrial policy, so far as it relates to the tariff. A bill detrimental to all American interests, especially the interests of farmers, has already passed the House and is now in the Senate. We therefore repeat our views on that question.

The National Farmer and Stock Grower is in favor of the United States Custom House collecting by law a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, the amount of said duties to be applied to the support of the national government.

By the tariff poliffcy that we advocate fully one-half the money required for the support of the national government can be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people. We are in favor of duties being levied upon all manufactured goods for the double purpose of furnishing revenue and for the protection of our manufactures, for the reason that all interests are entitled to protection, if it is accorded to anyone.

We look with seriousness at what we regard as a great and unnecessary blow to the best-producing industries of this country in the tariff bill that has passed the House. This country has had some experience in that line. Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result.

With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year; and if not collected that way will have to be collected by direct taxes upon our own productions. The foreign goods admitted free of duty displace home productions and result in higher prices to the American consumer and higher taxation also upon our own products to make up the lost revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm production should pay a duty at the front door as the goods are admitted, in compensation for the taxes we have to pay on our own. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country is far better off without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next, but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and general discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers. The farmers who can provide for themselves will be slow to increase their products in the face of injurious legislation that as it now stands is worse than the bogus proposition which the Canadians turned down.

The Beef Supply.

The beef supply is a little short and prices are tolerably high upon the market, but the principal cause for high-priced beef as it is placed upon the dinner table in restaurant, hotel or family is not due so much to the price received by the farmer as it is to the extravagtnt margins collected on each step of the way from the stock yard sale by way of the wholesaler, retailer, the hotel or restaurant keeper.

It is a common thing now to charge $1.50 to $1.75 for steaks that formerly were on the bill of fare at 60 to 75 cents, with considerable deterioration on the steak. Although it is notorious that mutton is cheap (it requires good sheep to sell at 4½ cents a pound on foot) mutton is sold just as high as beef, with the single, solitary exception of a restaurant in Chicago that is often frequented by sheep raisers, and there they would not stand for it.

On the basis that meat is selling at retail to consumers, prime native cattle, 1,400 pounds average and fat, ought to be selling at 15 cents a pound at Chicago or St. Louis; yearlings at 10 to 12 cents a pound; and mutton sheep ought to be selling at 8 to 10 cents a pound. More cattle have been marketed this year than last, and there is nothing but the desires of interested parties to justify the continuous claptrap about the famine in beef.

Kansas City, where cattle have been driven in by drouth, has only received a fair increase over last year, and the drouth-driven cattle are being shipped out again to Missouri, Indiana, Illinois, Ohio and other states, to be fed and fattened for sale next winter and spring.

If cattle, sheep and hogs are to sell any higher in the cities, there is a great, big advance coming to the stock farmer who is not getting his share of the money.

On September 1st, Chicago, St. Louis and Kansas City received a combined total of 60,000 head of cattle, and the highest price was $8.70 per 100 pounds. First-class hogs sold at $8.50, and good sheep at $4.00 per 100 pounds. These are not famine prices.

MONEY FOR FARM LOANS.

Postal Savings Banks Deposits Ought to be Used For the Purpose of Making Loans to Farmers on the Security of Their Lands and on Other Securities to Co-operative Associations of Farmers.

For several months The National Farmer and Stock Grower has published in its columns a petition addressed to the President and Congress for the purpose of securing to farmers the use of the deposits received by the postal savings banks, the same to be loaned by the government either direct to farmers or through the banks upon approved security at low rates of interest.

The petition is not in this paper, but we have a large number printed and will be glad to send some of them wherever a few signatures can be obtained.

We receive some of these petitions, duly signed, in every mail, but we are not receiving one-tenth the number we ought to receive. In writing for copies of the petition, address Philip H. Hale, Editor, 3550 Vista Ave., St. Louis, Mo.

Missouri Stock-judging Contest.

The annal live stock judging contest, held at the Missouri State Fair, will commence Monday morning, September 29th, at eight o'clock.

The Missouri State Fair offers fifteen cash prizes, amounting to $1,75, and a $50 Short Course Scholarship at the Missouri Agricultural College for proficiency in judging horses and mules, beef cattle, dairy cattle, swine and sheep. Any Missouri farmer's son under twenty-five years of age, who has never engaged in a stock-judging contest of interstate or international nature during any previous year, is eligible. Application for entry should be made at once to Secretary John T. Stinson, Sedalia, Mo. Entries close September 17th. (Signed) H. O. Allison, Superintendent Stock-judging Contest.

AGENTS WANTED.

YOUNG MAN, would you accept and wear a fine tailor made suit just for showing it to your friends? Or a Slip-on Raincoat free? Could you use $5 a day for a little spare time? Perhaps we can offer you a steady job? Write at once and get beautiful samples, styles and this wonderful offer. Banner Tailoring Co., Dept. 499, Chicago.

FARM AND RANCH LANDS.

ALABAMA.—Fertile prairie land near railroad town. Good for all kinds of farming, and finest of stock countries. Buy from owner and save commission. State number acres wanted. **D. Vaughan,** Catherine, Ala.

ARKANSAS FARMS.—Write for Homeseekers' Guide and large list of bargains. **L. E. Moore,** Searcy, Ark.

MISSOURI.—Improved farm of 40 acres on phone line. New land and a bargain at $700. **W. H. Spencer,** Bakersfield, Mo.

TEXAS.—Wanted, one thousand (1,000) white families to settle in Harrison county. Fine lands cheap. Plenty rainfall, timber, railroads, rural routes, churches and schools. For information, write **Young Men's Business Club,** Marshall, Texas.

TEXAS.—320 acres improved black land. Farm near Georgetown, in Williamson county. Part pasture. **F. L. Loggins,** 119½ East 6th Street, Austin, Texas.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Bldg., Chicago.**

FARM LABOR DEPARTMENT.

WANTED.—An energetic man and wife on 150-acre farm, to take charge either on shares or salary. Farm is one of the best equipped in the state. Land has produced good results and is located in the heathiest spot in Missouri. **T. A. Conrad,** Arcadia, Mo.

Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry— a splendid publication.

Send us thirty (30) cents for one-year's subscription to the Universal Magazine and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WHEAT HARVESTS.

A World's Crop and the Amount That is Harvested in Each Month of the Year.

"How much of the world's wheat crop is harvested each month of the year?" was asked recently of the Bureau of Statistics of the Department of Agriculture.

To answer this question estimates have been made based upon the average production in recent years and the usual progress of harvesting operations in the various countries of the world. These showed the following percentages: January, 5 per cent.; February, 1 per cent.; March, 3 per cent.; April, 7 per cent.; May, 4 per cent.; June, 15 per cent.; July, 34 per cent.; August, 26 per cent.; September, 2 per cent.; October and November combined, less than 1 per cent.; and December, 3 per cent.

In the United States, about 19 per cent. of the crop is harvested in June, 46 per cent. in July, and 35 per cent. in August.

From these estimates it would appear that almost no wheat is harvested in October and November, and that the world harvest season really begins in December, when operations start in Australia and South America, enlarge in January, and are practically finished in February. Operations begin in February in India, and increase in activity through March to April. In April operations begin in such countries as Persia, Asia Minor and Mexico. The falling off in May is due to the nearness to completion of the Indian harvest, and the season's crossing the Mediterranean from North Africa to Southern Europe, where harvest does not become active until June. In June, July and August about 75 per cent. of the crop is harvested. The season progresses steadily northward during these months. By September harvest operations are nearly completed. Scotland, Northern Russia, Siberia and Canada do a little harvesting in August. Practically no harvesting is done in October.

If the world wheat crop be regarded as about 3,600,000,000 bushels, the estimates above would indicate that about 108,000,000 bushels are harvested in December, 180,000,000 in January, 36,000,000 in February, 108,000,000 in March, 252,000,000 in April, 144,000,000 in May, 540,000,000 in June, 1,224,000,000 in July, 936,000,000 in August; 72,000,000 in September. Of course, the percentages and quantities will shift slightly from year to year, as the seasons are early or late and as production in a particular latitude is large or small. The above estimate, however, may be regarded as fairly typical.

ST. LOUIS AS A HAY MARKET.

Average Receipts a Quarter of a Million Tons a Year—A First-class Distributing Center.

In the year 1912 St. Louis received, consumed and distributed a total of 246,443 tons of hay, and it would not be at all surprising if St. Louis was recognized as the greatest and best distributing center for hay in the country. Hay is bulky and naturally ought to seek a near market, but St. Louis receives hay from a wider territory than most large markets. St. Louis has received 298,246 tons of hay in one year, which is more than Chicago received last year and only a few tons less that Kansas City.

The railroads usually bringing the larger quantities of hay to St. Louis market in the order named are: C., B. & Q.; Wabash; C. & A.; Mo. Pacific; Frisco; M., K. & T., and the Big Four.

In order to give a fair idea of prices paid in St. Louis we hereby include the sales which took place on the last day of the month of August, 1913. Sales on the St. Louis Side: Clover-mixed—One car No. 2 heavy mixed at $14; one car No. 2 at $15; one car No. 2 at $15.50; three cars and part car No. 1 at $16; one car No. 1 at $16.50; four cars good No. 1 light mixed at $17; one car choice do. at $17.50. Timothy—One car threshed at $13; one car do. at $14; part car scant No. 2 at $14.50; part car No. 2 at $15; one car No. 2 at $16; three cars do. at $16.50; two cars scant No. 1 at $17; three cars No. 1 at $18; four cars do. at $18.50; one car high No. 1 at $19. Prairie—One car poor (Arkansas) at $11; one car weedy at $12.50; one car No. 1 (Arkansas) at $13; two cars scant No. 2 at $13; part car No. 2 at $14; three cars No. 2 at $14.50; part car No. 2 at $15; one car choice at $17.50. Clover—One car No. 1 at $16. Alfalfa—One car No. 2 at $15; one car No. 1 at $17.50. On the East Side: Timothy—One car old No. 1 at $19. Clover—One car No. 1 at $16.

Be Sure You Get What You Pay For

There's more fraud in shoes than in almost any other article you wear.

Nearly 90% of all shoes retailed for less than $4.00 have paper, composition, or other substitutes for leather in the heels, soles, and counters.

These substitutes are hidden where you can't see them. You can't detect the adulteration until you wear the shoes and find them unsatisfactory.

You may have an old pair of shoes with run-down heels, counters broken down, or the outer sole ripped off. Cut them up and you will probably find them "adulterated".

The only reason why any manufacturer uses substitutes for leather is that they are cheaper than leather. They mean larger profits for him because you pay leather prices for the shoes.

Nothing can take the place of good leather for making comfortable and serviceable shoes. You want leather shoes. Be sure you get what you pay for.

★ ★

To be on the safe side always ask for and insist upon having "Star Brand" shoes with our name on the sole and our star on the heel.

"Star Brand" is the largest selling brand of shoes in the world—over seven million people wear them.

We have built up this vast business—23 big factories employing 10,000 people—in only fifteen years, simply by making "Star Brand" shoes of good honest leather.

If "Star Brand" shoes were not better than other shoes, we could not have grown from a small start to a business of over $15,000,000 a year, outstripping all other shoe makers in this short time.

We make more shoes than any other shoemaker. Our cost per pair is less. It costs us less to sell them. We give you more for your money than you can get in any other shoe.

★ ★

The "Patriot", our fine dress shoe for men, is made in 50 different styles at $4.50 to $5.00. As good a shoe in other brands would cost you $1.00 more.

The "Society", our beautiful dress shoe for women, is made in many styles and sold at $3.50 to $4.00. It is better than many other shoes sold at $5.00.

The "Stronger-Than-The-Law", our heavy work shoe, is the strongest and longest wearing shoe made. Its value has never been equalled. Made for men, women and children.

The "Soft and Good", a fine welt work shoe for men—soft as a glove. A long wearing, medium weight shoe at $3.50 to $4.00. This shoe has no competitors.

"Tess and Ted" school shoes are made in many styles for girls and boys. They cannot be duplicated for good looks and long wear.

Bear in mind that there are several different forms of stars used in trade-marks. The genuine "Star Brand" shoe has our name on the sole and our star on the heel.

Made in 750 different styles, sold by 20,000 good merchants. Don't just go into any store, but look up the "Star Brand" dealer. Get a pair and learn why

"Star Brand Shoes Are Better"

The "Our Family" shoe is made of fine box calf and gun metal leathers. Several styles, all sizes for every member of the family.

Last year 646,448 people bought this famous shoe. The two styles here illustrated will show the honest leather construction of the "Our Family" and all other "Star Brand" shoes.

Every "Star Brand" merchant has one of these shoes cut up to prove its honest construction. Go and see it.

The "Our Family" sells at prices ranging from $1.35 for the children up to $3.50 for men. It is a good looking, medium weight shoe—for every day or Sunday.

★ ★

All the above are "Star Brand" shoes with our name on the sole and our star on the heel. Every pair is made of good leather. We do not use substitutes for leather.

During the last six months Pure Shoe Bills have been introduced into Congress and several states, requiring that when substitutes for leather are used the fact must be stamped on the sole.

Many manufacturers and a few merchants are bitterly fighting these bills. From the start we have freely and openly endorsed these bills. We believe in this legislation because it gives you a square deal.

Our business has been built up on honest leather construction. We believe that this is one reason why we have grown so rapidly. If substitutes for leather were better than leather there would be lots of other shoe makers larger than we are.

★ ★

Ask YOUR dealer if he is in favor of a Pure Shoe law. Every "Star Brand" merchant believes in this great movement for pure leather shoes just as we do, because it insures that the wearer gets what he pays for.

The Oldfield Pure Shoe Bill now pending in Congress should be enacted into a law. The victory should be made complete, because it is a good law. Write your Senator and Congressman and urge them to vote for it.

Very soon you will buy your Fall and Winter shoes. Be sure you get the genuine "Star Brand" shoes.

MANUFACTURERS Branch of International Shoe Co. ST. LOUIS

Deep Tilling and Drouth.

If dry-farming methods were applied all over the United States the crops would surely be larger, and the foundation of dry farming is deep tillage. Deep tillage used to be done by two operations, whereas to-day it requires but one, and that one operation prepares a seed-bed that holds the moisture twelve to sixteen inches deep. On many farms the subsoil has never contributed anything towards growing the crops. To such places deep tilling is like finding a new farm. Write to Spaulding Department 88, Gale Mfg. Co., Albion, Mich., for catalogue of deep-tilling machines.

THE MILK CLARIFIER.

A New Invention Now on Sale to Suit Milk Producers and Dairy Farmers.

It is only recently that the De Laval Cream Separator Company has placed on the market a milk clarifier in sufficient number of sizes to be used to advantage in the largest milk-distributing plant or in the smallest dairy. The De Laval Milk Clarifiers are for use in dairies where the whole milk is sold without separating the cream. The action of the clarifier is directly opposite that of the separator; the butter-fat is not separated by the clarifying process; there is no interference with the cream line; the milk may be run and clarified at any temperature. The larger milk distributers to the number of a thousand have already put in these clarifiers and first-class country dairy farms are also adopting it as the best, quickest and most economical means of putting a perfectly pure and cleanly milk product on the market. Our readers should also read an article in this paper on the absolute necessity for cleanliness in milk production and then write to the De Laval Cream Separator Company, 165 Broadway, New York, and ask for a catalogue of the farm sizes of milk clarifiers recommended by The National Farmer and Stock Grower.

Cost of Making a Pound of Butter.

"From an investigation of the annual report for 1912 of seventeen creameries operating in Wisconsin, Michigan and Minnesota we find that the average cost of making a pound of butter is 2.07 cents. In the same way we find that the average cost in in all the creameries in a single county in Michigan in 1911 was 2.11 cents. This includes fifteen creameries. The greatest variation was from 3.5 cents in a small creamery to 1.1 cents in a creamery making over 500,000 pounds of butter a year. The cost includes salaries, supplies and all operating expenses of the creamery. It does not include dividends, new machinery, or what is ordinarily included in the sinking fund.

"The size of the creamery has a great deal to do with the cost per pound of butter. Putting the two groups together we find that in five creameries making less than 100,000 pounds per year the cost was 2.7 cents; in ten making between 100,000 pounds and 200,000 pounds the cost was 1.99 cents; and in fifteen, making over 200,000 pounds, the cost was 1.28 cents. The type of creamery does not seem to influence the cost yearly.

"The creameries were all of the co-operative kind, and would represent average management. From these figures the approximate operating expenses of the creamery can be obtained. They should throw light on the price the dairyman should receive for butter-fat."—G. A. Gilbert, Colorado Agricultural College, Fort Collins, Colo.

The Making of the Dairy Cow.

"The best forecast of the future dairy cow is the number of pounds of feed received from weaning time until two years of age. The ration between the productive capacity of the cow and the care given her during the growing period is quite constant. Constitution and capacity can only be gotten by supplying the necessary building requirements. Large, strong cows are the results of care while heifers. The dairyman must be both a breeder and feeder. Improper feeding defeats the very object sought by breeding. The dairy cow is a highly-specialized animal, and, like all specialized animals, there is a tendency toward reversion, this tendency increasing with the more highly developed and improved animal. Scant feeding causes as rapid reversion toward the unimproved type as does careless breeding.

"The animal must adapt itself to its surroundings,, and reversion is no more than adaptation; so if the food supply is not sufficient the greatest development, which means the greatest efficiency, is not possible."—W. A. Barr, United States Division of Dairying, Colorado Agricultural College.

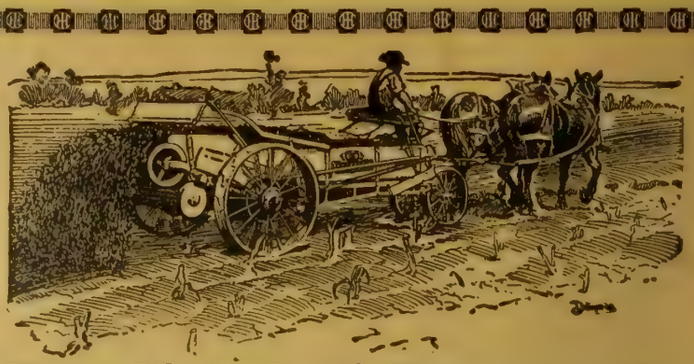
SEPARATOR CREAM.

Selling Whole Milk and Only Selling Cream—A Woman With a Few Cows.

Statistics state that 60 per cent. of the milk as it arrives in the cities from the farms is below standard in quality. This is a leakage large enough to attract attention, and it certainly should find its remedy. This is due in part to improperly-constructed and kept stables, and to carelessness of milkers. But more than any other single defect will doubtless prove that of caring for the milk.

The hand cream separator solves this difficulty more quickly and effectually than any other plan. Do you lack ice, the comparatively small amount of cream may be kept cool easily. It is sent to the factory in the light wagon instead of being compelled to rattle along slowly in the heavy milk wagon. Instead of sending whole milk to the city, send the cream to the factory.

It is uniform in quality, and the man who buys cream of you is certain to get about the same grade from day to day, no matter whether it is warm or cool. There need be no apology that there is little more milk with it "because the cream does not rise so quickly on warm nights." The cream gauge fixes this mechanically. It may be thick or thin, as the requirement of the market dictates or permits. It is bound to be rich, for all of the fat in the milk is withdrawn. And it must be free from all foreign particles, as those who have strained and separated milk well know. In fact, having once washed the various parts of a separator and seen the refuse which is removed in the process, one cannot but have a very decided preference for separated milk, from the sanitary point of view. It is no wonder that the butter has a better flavor, as it certainly has, or that the velvety-separated cream, sweet and rich, is in greater demand by all who have given it a trial. A small farmer with a few cows can often find a better market for cream alone than for the whole milk.—Bessie L. Putnam.



Best-Hated of Farm Tasks

ON the spreaderless farm the thought of the great heaps of manure piling up constantly in barn yards, stables, and stalls, is a gloomy one. Those piles mean much disagreeable and hard work. Three times every bit must be handled. It must all be loaded onto high wagons. It must be raked off in piles in the fields. Then every forkful must be shaken apart and spread.

Compare that old-fashioned method with the spreader way. You pitch the manure into the spreader box, only waist high, drive out and —the machine does all the rest.

And, far more important, if you buy an I H C spreader one ton of manure will go as far as two tons spread by hand, with the same good effect on the soil, and it will all be spread evenly.

I H C Manure Spreaders

are farm necessities. The man who uses one will get the price of it back in increased crops before its newness has worn off.

I H C spreaders are constructed according to plans in which every detail, every feature, is made to count. They are built to do best work under all circumstances, and to stand every strain for years. They are made in all styles and sizes, for small farms and large, low and high machines, frames of braced and trussed steel. Uphill or down, or on the level, the apron drive assures even spreading, and the covering of corners is assured by rear axle differentials. In all styles the rear axle is placed so that it carries near three-fourths of the load. This, with the wide-rimmed wheels with Z-shaped lugs, makes for plenty of tractive power. Winding of the beater is prevented by large diameter and the beater teeth are long, strong and chisel pointed.

A thorough examination of the I H C spreader line, at the store of the local dealer who sells them, will interest you. Have him show you all these points and many more. Study the catalogues you can get from him, or, write the

International Harvester Company of America

Chicago U S A

New Market at St. Louis.

Near Grand avenue and Olive street, St. Louis, Mo., there is to be established a central market for the sale of farmers' products, principally vegetables, fruits and poultry, from farm wagons. About 400 farmers and gardeners have agreed to occupy stalls, which will cost $35 to $50 per year. It is expected that the market house will cost $450,000 and be ready for occupancy by January 1st, 1914. The movement is under the auspices of the St. Louis County Farm and Market Bureau.

The Cost of Bad Roads.

A farmer in Sullivan county, Tennessee, a few miles from Bristol, had 100 bushels of Irish potatoes which he intended to market during the winter of 1907-08. Owing to bad roads he was unable to haul the potatoes at all, and they rotted in the cellar. Nevertheless, the price of potatoes at Bristol went as high as $1.40 per bushel in the meantime. A Bristol merchant stated that during the winter as many as ten car-loads of farm produce, including wheat, potatoes and other supplies, were daily shipped in to feed not only Bristol, but the adjacent territory. This statement is by authority of the United States Department of Agriculture.

Moisture in Export Butter.

From our Australian exchanges we find statements in regard to the moisture content of butter. During the past seven years 13,193 samples were analyzed. The average moisture content was 13.84. Only 2.55 per cent. were over 16 per cent. moisture. The report states: "There was a great deal of controversy as to the maximum moisture that should be allowed in butter. While the maximum allowed was 16 per cent., the average moisture was 13.44 per cent. for 1907-08; 13.97 per cent. in 1909-10; and 13.82 per cent. in 1910-11. In 1911-12 the average was 13.91 per cent., although the maximum permitted had been reduced to 15 per cent."

Book of Champions on page 31.

The Fence That STANDS Tight and Trim The Whole Year Round

—and Why (15)

Every farmer knows that a fence which will stay tight and trim through summer and winter must be built to give and take. It must be made of tough, springy wire, and in such a way that in contracting and expanding it will take up as much as it gives out.

There are several reasons why

"Square Deal" Fence

Stays Tight and Trim the Year 'Round

FIRST: Note that the strand wires are wavy. This gives the fence *elasticity*—its give and take—*keeps it tight* summer and winter.

SECOND: The Stay Wires are *one-piece* from the top wire to bottom one, forming the backbone of the fence, which stiffen and support it, absolutely preventing sagging and bagging.

THIRD: Note the *SQUARE DEAL LOCK* which double-grips the wires so tightly they cannot possibly slip. It is one of the most important parts of a wire fence.

We use the toughest, strongest wire—draw it, anneal it, galvanize it in our own mills; then weave it into Square Deal Fence. We know how it is made—the kind of material that's in it—stand back of it with our Square Deal Guarantee, which insures every purchaser a Square Deal and perfect satisfaction.

FREE—Write for Catalog, Prices and Ropp's Lightning Calculator

We want you to know more about this "honor built" fence. Our catalog tells the story. If you will write for a copy we will send you FREE, a regular 50c copy of Ropp's New Lightning Calculator, the greatest money, time and labor-saving work for farmers and others, ever used in the business world.

KEEPING MILK SWEET.

Nothing Better Than Absolute Cleanliness—A Paris Exposition Incident—Reflections on the Subject.

The time that milk can be kept sweet regulates to a large extent its value for the whole milk trade and partly regulates its value for the cream trade. Sour cream, however, can be utilized in many cases where sour milk cannot be utilized. All kinds of preservatives have been tried on milk, some of them harmful and some of them not. Cold and heat have both been extensively employed. But up to the present time nothing has been found to equal absolute cleanliness, and the inventors will make progress faster by working along this line than any other. If ways can be found to draw the milk from the cow so that the milk will be perfectly free from dirt and microbes of all kinds, a great step will have been made in advance. Many trials have been made to show the effect of this perfect cleanliness.

During the World's Fair held in Paris in 1900, the people in attendance found that it was difficult to get milk that was sweet. Milk produced outside of the city and brought in the same day was sour by night. This does not speak well for the cleanliness of the Parisian dairies. In the middle of the summer, in the hottest weather, good milk was served to many people, and they were astonished to learn that the milk had been drawn from cows seventeen days before in Illinois, and that it had come four thousand miles in an ice chest; that it had not been pasteurized, and that it had in it no chemical preservative.

The only reason for the milk being sweet was a combination of circumstances under which it had been drawn and kept. The cows that gave it were healthy, vigorous cows, and had been fed on good silage and ground grain. Their udders had been washed before the men began to milk, and the floors of the stable had been made clean with water from a hose, so that no dust was floating in the air before the milk was drawn. No hay was in the stable when the cows were being milked, for that might have cast off particles of dust. In fact, no dust was in the stable anywhere, either in a corner or on the rafters overhead. A sunbeam streaming through an aperture would have shown almost no dust floating in the air. The men that milked the cows had on clean duck suits, and they had just washed their hands, so that no particles of dust could come from their hands as they pressed the teats of the cows. The pails into which they milked were partly covered with a metal top, and the rest of the aperture was covered by two pieces of muslin, between which was some absorbent cotton. The first milk from the teats was thrown away, so that the bacteria in the orifice of the teats would not get into the milk that was to be sent abroad. Then the streams of clean milk fell from clean teats under the pressure of clean hands into a clean pail, protected as completely as it was possible to protect anything. This milk was put without straining into receptacles that had been sterilized and was then sealed hermetically. It was not till eighteen days after that acidity began to develop in the milk.

A great many trials have made, first and last, to ascertain how long perfectly pure milk would keep. A Belgian experimenter has recently produced milk that kept sweet for twenty days at a temperature near 60, and he had in it no preservative. Other European experimenters have drawn milk under conditions and kept it under a low temperature in which it kept sweet for thirty days.

It is extremely difficult to obtain milk in such a condition that some bacteria will not get in from the air. Possibly, if cows kept on the high Alps in winter were milked out of doors the conditions would be favorable for securing milk without germs, as snow and ice covering the whole country should deprive the air of even the few germs that float in that high atmosphere in summer. It would be interesting to know how long milk with not a single germ in it would keep.

RENOVATING OLD FURNITURE.

An Article Worth Reading For Those Who Have More Time Than Money.

It takes some courage to undertake work that properly belongs to a "professional," no matter in what line it may be be: but nothing venture nothing gain, was my thought when we decided that several misfits should be made to conform to our color scheme in furniture.

When golden oak was in fashion, we bought several pieces, some of which in spite of the lapse of years were as good as new, being substantial and well made of beautifully-marked grain and the wood was not marred at all, the finish alone being the worse for wear and the color also objectionable.

The first step was to remove what remained of the varnish or other coating and get down to the bare wood. This was done with a paint remover bought at a paint store. The directions said to use a broad-bladed putty-knife to scrape off the finish after brushing the remover well over the surface, but we found that we could do much more effective work with a rag, discarding it as soon as it became sticky from the paint or varnish adhering.

The first article made new was a large, old-fashioned sideboard, and its plain surface was a delight to work on. Except for some turned uprights that supported a mirror, and for grooved columns at the front of the ends, there were nothing but plain surfaces. To make the grooves clean without marring or scratching the surface, we used orange sticks, such as are used for cleaning the finger nails, and they worked as a charm.

Further directions on the can said when the finish was all removed to use benzine to wash the whole surface to be redecorated. We used gasoline instead, which is cheaper and does the work. The next thing was to set the proper stain to match our other furniture. Consulting the color card, we found that antique oak was what we wanted, and we put on two coats before we got the desired shade and followed this when dry with a finish that lacked the objectionable gloss of varnish. This, too, is a proprietary article that is handled by all paint dealers.

We got new knobs and the other trimmings and we have a beautiful, serviceable addition to our dining room at a cost of five dollars in money and a little work at odd times, when the time did not have a cash value. Before undertaking this renovating we had a call from a firm doing such work, the solicitor estimating the value of complete renovation at fifteen dollars, and this was what set us to thinking that as we had more time than money we might try our own hand at it.

A roll-top desk and a library table were the next we tried our hands on and they are like new. Both these were golden oak like the sideboard; so we went through the same process as described. We had three rockers and an arm chair that the finish had been literally cooked on by use in very hot weather, and as these were the color we desired, they did not need any stain when the outside finish was taken off, and all they needed was the finishing coat like we gave the other pieces.

When we clean house we will have some nice "new" furniture that has cost very little in comparison with what a dealer would ask for something as good, and we have the satisfaction of putting new life into what was an eyesore. There are few homes that do not have discarded furniture that would be far handsomer than new, unless the new is expensive, if some pains were taken to repair the ravages of time, and the greatest outlay is labor.

I neglected to say that a bruise in the table was repaired by laying a wet cloth—a piece of felt—on the place and putting the edge of a hot flatiron on the felt. This brought out the dent. Another help in smoothing the surface and taking off rough places was sandpaper No. 1. This is fine and does not cut the wood, but makes it as smooth as glass.—Cora S. Cornman.

DE LAVAL CREAM SEPARATORS

Make Fall and Winter Dairying More Profitable

THERE are special advantages in using a good cream separator during the fall and winter months.

The milk from cows long in lactation is hardest to cream,—and likewise hardest to separate with an inferior separator.

Moreover, cream and butter prices are highest, so that the waste of gravity setting or a poor separator counts for most.

Then there's the sweet, warm skim-milk for stock feeding, alone worth the cost of a separator in cold weather.

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one. A De Laval machine will save its cost by spring, and may be bought on such liberal terms if desired as to actually pay for itself meanwhile.

See your local De Laval agent.

ST. LOUIS AS A WHEAT MARKET.

More Activity in Trade and Larger Receipts Than in Former Yers.

On August 30th, cash wheat, No. 2 red, was selling at 89 to 92½ cents a bushel on the St. Louis market, against 83¾ to 85 cents on July 31st.

On August 30th, at St. Louis, cash wheat, No. 2 hard, was selling at 85½ to 90 cents a bushel, against 83¼ to 90 cents on July 31st.

The figures we have given are for cash transactions for grain delivered on track, and represent sales as near direct from the producer to the consumer as can be done under the present market system.

Leaving the St. Louis cash market for the so-called speculative market, we will go to Chicago, and find that prices are very little changed.

The September Chicago wheat option was quoted at 90 cents a bushel on June 30th; was reduced to 86 cents by July 31st, and at the close of the market, August 30th, the September wheat option was quoted at 85⅞ cents. The September option has thirty days to run before deliveries are made.

The December wheat option is the next following September in the quotations. On June 30th the quotation was 93⅛ cents; on July 31st the quotation was 89⅞ cents; and on August 30th the closing quotation for wheat was 89⅝ cents.

Thus we are shown the prospects of the Chicago wheat market up to December 31st, 1913, as the trade understands it.

A jump from the December quotation to another quotation that matures on the last day of May, 1914, is a very long jump, but those who buy and sell grain are used to it. Intelligent consideration of the May option requires some light upon the next year's crop outlook, but that is not safe ground to speculate upon at present, yet trading in wheat for May delivery is in the regular order of business, just as much as it is in fashion now for a merchant to order straw hats for spring delivery

On July 31st, at Chicago, the May, 1914, wheat option was quoted at 95⅛ cents, and on August 30th, on the close of the day, the quotation stood at 94½ cents. Thus we see that wheat is cheap and out of the prices quoted freight and market charges have to be deducted.

Wheat receipts in St. Louis in August, 1913, amounted to 4,353,633 bushels, compared to 5,455,290 bushels the previous month, 8,288,393 bushels in August, 1912, and 1,752,318 bushels in 1911. Total since July 1st, 1913, reported at 9,808,923 bushels, compared to 12,373,254 bushels same time last year; local elevator stocks now 2,697,116 bushels, compared to 2,596,371 bushels a year ago.

The Warmest August.

The month just passed was the warmest August since 1900, and one of the warmest on record in and around St. Louis.

There were twenty-two days with a maximum temperature of 90 degrees or above and five days with a maximum of 100 degrees or above. On twenty days the minimum for each twenty-four-hour period was 70 degrees or above.

The highest temperature during the month was 102 degrees, on the 6th. The absolute maximum recorded for August is 106 degrees, to which point the mercury climbed August 12, 1881. The maximum for August last year was 96 degrees.

The lowest temperature during the month was 61 degrees, on the 23d, and the absolute minimum for August in St. Louis is 45 degrees, the record established August 30, 1863. The minimum for August, last year, was 55 degrees.

The mean maximum temperature for the month was 93.6 degrees. The mean maximum temperature last year was only 85.7 degrees. The mean temperature for the entire month was 82.9 degrees, while last year it was 76.8 degrees.

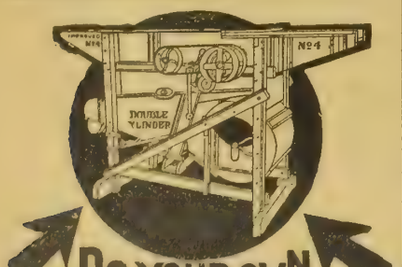
The total precipitation for the month was 1.65 inches, while the normal rainfall for the month for the last forty years has been 2.66 inches.

There were eighteen clear days, ten partly cloudy and three cloudy.

Alsike Clover For Hay.

A Tennessee correspondent says he has never been very successful in growing red clover, and asks if alsike would do better, and if it makes good hay.

Unfortunately, clover blight is fatal to clover in some regions in Tennessee, and other clovers and grasses must be used for both hay and pasture. Alsike clover is hardy and it makes good feed. It will grow in some situations where common red will not grow. I advise this correspondent to make a litmus test to ascertain whether his ground is acid or not. Then I should not sow clover alone. A good combination for either meadow or pasture is four pounds alsike, five pounds orchard grass and five pounds red top. Alfalfa is doing well in some sections of Tennessee, and, where clover is a failure, it is worth trying.



DO YOUR OWN THRESHING

of beans and peas with a guaranteed Owens Thresher. All your seed separated and cleaned from the vines and pods without splitting. Pea and bean growing is the most profitable farming if handled right.

OWENS DOUBLE CYLINDER
Bean and Pea Thresher
—Made in 4 sizes—

Will pay for itself many times over in one season. Guaranteed not to split the seed and take all from the vines.

Big Arkansas Farm Sold.

Judge Robert M. Foster, of St. Louis, has sold to B. L. Willey, of Pine Bluff, Mo., the Gilliland plantation near Altheimer at a consideration of $75,000. The place comprises 2,587 acres, 1,800 of which are in cultivation.

First Missouri Cotton In.

The Senter Commission Company received the first bale of new cotton produced in Missouri this year on August 29th. It was shipped by G. B. Garrett, of Caruthersville, and grades a full style of middling. The bale was sold to George S. Tiffany & Co. for 15 cents a pound. This is at a premium of two cents a pound.

MASTERS OF THE WORLD.

"Simple words, short maxims, homely truths, old sayings, are the masters of the world. Great reformations, great revolutions in society, great eras in human progress and improvement and reform start from good words, right words, sound words, spoken in the fitting time and finding their way to human hearts easily as the birds find their homes."—D. Co-operative Clubbing Arrangement.

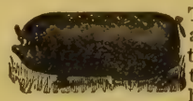
Four Great Papers . . For One Year . . . . . For Only One Dollar.

FOUR STERLING, UP-TO-DATE SPECIAL FARM PAPERS.

THE NATIONAL FARMER AND STOCK GROWER—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



THE AMERICAN SWINEHERD—issued monthly—a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

THE SHEPHERDS' JOURNAL is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

THE RELIABLE POULTRY JOURNAL—the largest, best and most elegant poultry journal issued in the United States. Great on breeding points, and splendid articles on raising, feeding and shipping poultry. THE RELIABLE POULTRY JOURNAL is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of Poultry Husbandry and retain the peculiar quality of being good instructors. You gain something every time you read THE RELIABLE POULTRY JOURNAL.

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

ST. LOUIS AS A CORN MARKET.

The Drouth Reports Were the Cause of Advancing Prices Five to Six Cents a Bushel in One Month and Ten to Eleven Cents in Two Months.

The farmer who has to buy corn is unfortunate because corn has advanced in price in consequence of the drouth; but in a state like Missouri, speaking generally, the reduced production is offset by the the advance in price.

On June 30th, at St. Louis, cash trading only considered, the price was 63 cents; and on July 31st the price was advanced to 67⅛ cents; and on August 30th the price had advanced to 74¾ cents, a clear gain of 11 cents and a fraction a bushel. That is the record which can only be considered in a general way, because each farmer has his own conditions to face.

In the so-called Chicago speculative market we will show four-months' quotations on three living options:

	Sept. 1913.	Dec.	May, 1914.
May 31	58¼	56⅝	....
June 30	62¾	59½	....
July 31	66	63	65
August 30	72¾	68⅝	70½

In our opinion, the Board of Trade operators, speaking by actions, can give us a better idea of crop conditions than any other agency. They consider all reports and verify them; they are in touch with the trade. Some of them do not take their thoughts off the market, even while they are sleeping, consequently the quotation as given, representing the concentrated opinion at the time quoted, can be regarded with almost as much respect as the final score in a base ball game, for when an option is closed it is not unlike a ball game that has been played.

In considering what St. Louis amounts to as a market for cash corn, many people will be surprised to learn, with Chicago the only exception, St. Louis is the greatest market of them all.

Peoria, Kansas City, Toledo, Detroit, Milwaukee, Cincinnati, Indianapolis and Omaha are all behind St. Louis; in fact, last year St. Louis received as much corn as Kansas City, Cincinnati and Toledo combined. St. Louis is nearer the center of the corn belt than either Omaha, Des Moines or Kansas City, having Ohio, Indiana and Illinois on the east, and Iowa, Missouri, Kansas and Iowa on the west.

St. Louis Cash Grain.

The following are St. Louis prices for cash grain on August 30th, 1913:

Wheat.—No. 2 red wheat, 89 to 92½c.; No. 3 red, 89½c.; No. 4 red, 87c.; No. 2 hard, 85½ to 90c.; No. 3 hard, 84½ to 88c.

Corn.—No. 2 corn, 74½ to 74¾c.; No. 3 corn, 73¾ to 74c.; No. 2 yellow, 74½ to 74¾c.; No. 3 yellow, 74c.; No. 4 yellow, 73c.; No. 2 white, 75c.; No. 3 white, 74 to 74½c.; No. 4 white, 73c.

Oats.—No. 2 oats, 41 to 41½c.; No. 3 oats, 40½c.; No. 4 oats, 39½c.; No. 2 white, 41¾ to 42c.; standard, 41 to 41¾c.; No. 3 white, 41 to 41½c.; No. 2 rye, 70c.

The Cowpea-hay Crop.

Probably a larger acreage of cowpeas will be cut for hay this season than any previous year since we began growing the crop. The crop is valuable and stands next to alfalfa in feeding value, but unfortunately it is rather difficult to handle. Of all legumes, cowpeas, because of the large, coarse stems, are difficult to cure, and most careful methods must be employed to get the crop up in good condition.

Cut the crop when the first pods begin to turn and when the leaves begin to turn yellow. Let the crop lay in the swath a little longer than you would a heavy crop of clover, but be sure to rake up into windrows before the leaves become dry and brittle. The leaves are the most valuable part of the plant for hay, and the object, as with clover, should be to get the crop cured without shattering the leaves. Don't leave the crop in windrows more than twenty-four hours, for right here is where so much cowpea hay is spoiled. If it is heavy and watery, it it better to put the crop in cocks and leave it in this shape for a week or ten days to cure. Some use the side-delivery rake and some use tedders in handling their cowpea hay. The objection to these things is, they shatter leaves with every handling, and the thing to do is to get the crop cured with as little handling as possible. Sometimes the growth is so rank that the crop will not cure readily in the windrows. It is then best to leave it in the swath longer and not depend so much upon the curing in windrow or cock.

Cowpea hay will not turn water any better than clover, so stacks should be covered with slough hay. or, better still, store the cowpea hay in sheds with rain-proof roof.

Crimson Clover in Southern Illinois.

A Monroe county, Illinois, correspondent asks these questions: "Is it now the right time to sow crimson clover in this section? Would it be all right to sow it in corn? Will it make hay?"

Crimson clover should be sown now as soon as possible. Two or three weeks earlier would have been much better. It is not very hardy, however with favorable conditions it will live through the winter in Southern Illinois. One of the essentials is, that it must become pretty well established in the fall. If it survives the winter it will produce a hay crop, but the corn stalks would be a detriment. If hay was the main object, I would not seed it in corn. Crimson clover is rather uncertain in any part of Illinois, and except for cover crop and for plowing under it is not used to any great extent.

Pea and Bean Threshing.

The crop of peas and beans is far less than the demand for them; consequently prices are good and will continue to be good until the supply again exceeds the demand, which is not likely to happen for many years. Peas and beans are legumes and the stubble turned under enriches the land.

J. L. Owens Company, whose advertisement will be found on page 12, are manufacturers of pea and bean threshers which are made in four sizes. In furnishing instructions for harvesting peas and beans, that firm has also included a carefully-prepared article on pea and bean culture which has greater value to the farmer than any other book or pamphlet on the subject. Many an unprofitable farm has been brought into profitable production by raising beans or peas and turning under the stubble and selling the beans and the hay of the cowpeas and navy beans. Write to J. L. Owens Company, Chamber of Commerce Building, Minneapolis, Minn., and mention this paper, then ask for "Free Book on Pea and Bean Culture," and you will receive something worth having and studying.

Plowing Under Soy Beans.

A correspondent states he has in a large acreage of soy beans, intended for forage, but he now has plenty of hay and is thinking about turning under the entire crop of soy beans. He also asks for relative root and top value of soy beans, as compared with clover.

If this ground needs more organic matter, I advise turning under the crop of soy beans, providing it can be done early enough. I am a stickler for feeding all this character of crops, whenever one has the stock, and return the manure to the fields. But where one is short on live stock, and long on feed, then feed the ground with the abundant growth.

In regard to the value of the tops and roots of soy beans, as compared with clover, I presume our correspondent refers to the fertilizing value. Soy beans and cowpeas have a much shorter period of root growth than clover, and for this reason the roots do not contain as much nitrogen. Possibly 10 to 11 per cent. of nitrogen would be contained in the roots of soy beans, at maturity, while clover roots would contain from 25 to 30 per cent. A ton of dry clover contains about 40 pounds of nitrogen, while a ton of soybean hay, or tops, would contain around 50 pounds of nitrogen. These facts show the great value of soy beans as a quick nitrogen gatherer. and particularly are they valuable in soils and under conditions where clover cannot be depended upon.

THE AYRSHIRE BREED.

A Profitable Cow as a Milk Producer.

In the attempt to verify the claim that the Ayrshire was a profitable dairy cow, we sent to each breeder whose herd was in the Advanced Registry test, a request to keep as careful a record of all food given each cow in the test as possible, on blanks furnished for that purpose.

A good many kept an account of the food consumed, but did not give the cost, and some gave the kinds, the amount and the cost, locally. On account of the difference in cost of food in different localities and the difference in the price of the dairy product in different localities, allowance must be made in estimating the relative profit from the different herds located in widely different sections of the country.

Mr. F. N. Dow, Portland, Me., reports an average of 4,226 quarts of milk, costing .0261 cent per quart. Mr. Dow does not state the price he receives for his milk, but as he is near Portland, it seems fair to value his milk at 5 cents per quart, wholesale, which would give him an average profit of $99.71.

Mr. Geo. H. Dunsmore, Swanton, Vt., reports an average of 4,040 quarts per cow, costing .0166 cent, per quart, which would probably sell at 4 cents per quart, making an average profit of $94.54 per cow.

Highland Farm, Bryn Mawr, Pa., reports an average of 4,490 quarts per cow, costing .0289 cent per quart, which at wholesale would sell at 5 cents per quart, making a profit of $94.74 per cow. As the milk from Highland Farm is sold as certified milk, it brings 10 cents a quart wholesale and 15 cents retail.

The Missouri Agricultural College reports an average of 3,660 quarts per cow at a cost of .0189 cent, which if sold at 5 cents would yield an average profit of $114.01 per cow.

In none of these reports is any charge made for care of cattle or any credit given for calves sold.

From the above reports it would look as though the Ayrshire was a profitable cow as a milk producer.—C. M. Winslow, Secretary, Brandon, Vermont.

Hog Brains For Medicinal Purposes.

According to an article in a Danish newspaper, a stock company has been formed at the city of Kolding, Denmark, which will buy from the Danish hog abattoirs all the brains from hogs they can produce. From these brains the company will manufacture "Lecithin" and "Collestrin" for export to Germany and Switzerland, where they are used in the manufacture of certain medical preparations. It is considered that about 800 pounds per day may be produced. The brains are paid for at about three cents per pound (presumably Dutch cents, making the three cents equal to one and two-fifths cents United States currency), and on an average it takes four brains to make one pound of the above-mentioned products. Lecithin is a fatty substance, while Collestrin is a dry powder, something like naphthaline.

ST. LOUIS AS A HOG MARKET.

Alive With Active Competition and Growing as Fast as Hogs Can Be Supplied.

It has often been said, with evidence to prove it, that the St. Louis market has more elements of competition than all other markets combined. St. Louis is certainly responsive in the matter of competition, and one great reason for it is that the supplies consist of all weights of hogs, from the smallest merchantable pigs to the heaviest hogs which are used in the packing trade.

In some of the Western markets the hogs are so uniform in weight that buyers are barred if they cannot use the hogs that are represented by the bulk of the arrivals. In St. Louis, buyers of all weights and all kinds are able to fill their orders without difficulty.

Twenty years ago, before Morris, Swift or Armour slaughtered hogs at St. Louis, the market was kept active by the butcher trade of St. Louis and by the shipping orders from New York, Buffalo, Cleveland, Indianapolis and other Eastern markets, and now that there are sufficient packing houses at the yards to absorb the entire receipts there is the double competition that causes the struggle to buy that is the active principle of a great market.

In a market it often happens that the packing-house buyers prefer hogs as heavy as they can get them. Indeed, formerly a packing drove of hogs was expected to average 275 to 300 pounds. The butchers preferred lighter hogs for the fresh-meat trade, and that placed the 200 to 250-pound hogs at the top of the market class. New York and interior markets were looking for hogs 175 to 200 pounds, and other markets, notably Baltimore, bought hogs averaging 100 to 140 pounds. Recently, however, with packers also in the fresh-pork trade, there is no telling to what extent they will buy the lighter weights. The mixed loads of hogs forming so large a proportion of St. Louis receipts afford great opportunities in filling orders which come from the great consuming districts east of us, and, combined with the butcher and packing demand, will always afford to hog raisers sufficient demands for all the hogs that can be concentrated at the St. Louis market.

In this paper every month we make a record of St. Louis hog prices, so that comparisons can be made month by month and year by year.

Butter in Storage.

The best authorities on dairy produce are agreed that the supply of butter in storage is very much larger than it was last year.

In a recent issue of the Elgin Dairy Report there appears the statement that the four markets of Boston, New York, Chicago and Philadelphia had a total of 903,200 packages in store on August 1st, 1911; that on August 1st, 1912, the total was 932,700 packages; and that on August 1st of the present year the total was 1,207,600 packages. Although all markets show an increase in the amount of butter in store, the increase in Chicago alone is 200,000 packages.

New York also has received butter liberally, the July arrivals amounting to 322,734 packages, a record on that market by an increase of 8,174 packages over the receipts of any previous month.

People of the cities are still complaining of the high cost of living, but the wholesale price of the best creamery butter was quoted at 26½ cents, against 25 cents at the same time last year.

Filling the Silo.

Corn is ready to be cut for silage when the grain is in the dent and glazed, but can still be broken with the thumb nail. At this stage, under normal conditions, the two or three bottom leaves will be turning brown and the shuck will be turning yellow at the end. There is greater danger of putting up silage too dry rather than too moist. In a stave silo the staves should be tightened up to exclude the air and generally loosened a little after the silage swells the staves. The inside wall of a concrete silo should be washed with a thin mixture of cement and water every two or three years. This fills the pores and keeps the air from the silage.

It will take at least six teams to keep the average silage cutter busy. Corn should not be cut down too far ahead or it will dry out too much. Two men should work in the silo distributing the silage with forks. Where a silage distributer is used one man is sufficient. They should keep the silage higher at the walls than in the center and should continually tramp the silage next to the walls. The tramping is especially to keep out the air. When possible, allow the machine to start two or three days and refill to make use of all the capacity. Finish filling the silo by running in a load of grass or weeds. This will rot and seal the top and prevent having to throw out the same amount of spoiled silage.

The silage should feel wet after it is cut in the silo. If the corn is very mature when cut and is therefore too dry, add water. A small stream may be run into the blower from a barrel or tank. It is especially important that the silage be well tramped. The blower should be run a few minutes every morning in order to clear the atmosphere before anyone enters the silo.

The above instructions cover the important points in filling a silo.—Dairy Department, University of Missouri, Columbia, Mo.

Panama-Pacific Exposition.

The Panama-Pacific Exposition is doing fast work, and, like the canal, may probaly be open ahead of time.

Don't Be Disheartened By Hog Losses Prevent Future Losses With MERRY WAR POWDERED LYE

lyers,
resident,
. Myers
ye Company

I know just how you farmers and hog raisers feel when you see a nice big bunch of fat hogs taken down sick, refusing to eat, getting thin and scrawny and slinking off into fence corners to lie down, stretch out and die. It's hard luck. It means the loss of hundreds—perhaps thousands of dollars to any one of you.

Now I want to tell you that there's no need for you to be discouraged—no need for you to repeat that disheartening experience **—no need for you to lose another hog on account of Cholera or Worms.** Just do what thousands of other practical farmers are doing every day—mix a little MERRY WAR POWDERED LYE with your hogs' rations (directions on every can) **and feed regularly twice each day.**

Fat, Healthy, Worm-Free Hogs

will be the result. It will put and keep your hogs on their feed—destroy every ill effect of hog worms—keep your hogs so healthy, strong and vigorous that, **even should cholera break out in your neighborhood, they'll be so conditioned as to resist it.** Thousands have **proved by experience** that MERRY WAR POWDERED LYE **is a safe preventive of hog cholera.**

Read This Convincing Proof

J. E. VAWTER, Beverly, Kans.—"25 hogs lost 1 mile east; 60 hogs lost 2 miles north; 20 hogs lost 2½ miles south of me, but I used MERRY WAR POWDERED LYE and escaped loss."

MRS. T. AKINS, Hoxie, Ark.—"MERRY WAR POWDERED LYE is all the Lye that we use. Before we began using it we had a lot of hogs with Cholera. We used it and it cured our hogs."

10c A Can At All Dealers

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can **(120 feeds).** It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied, and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.**

There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.

Mohair top and boot
Clear vision windshield

Stewart speedometer
Electric horn
Flush U doors with disappearing Hinges
Turkish upholstery

With Gray & Davis Electric Starter and Generator—$1075

HERE is the car of the hour!

The 1914 Overland is ready for immediate delivery.

Again we lower the price. Again we increase the value.

This new car is larger, more speedy and powerful, more finely equipped and more elegantly finished, but in spite of this enormous value increase the price has been materially decreased.

The motor has been enlarged to 35 horsepower and will develop 50 miles an hour with ease.

The wheelbase has been lengthened to 114 inches—which is the average wheelbase of $1500 cars.

The 1914 Overland tires are larger; the tonneau is longer and roomier; the equipment is better—including such big and costly additional features as electric lights; the body is handsomer, being finished in beautiful rich dark Brewster green, with heavy nickel and aluminum trimmings.

The 1914 Overland is the most magnificent and graceful popular priced car that has ever been made.

In fact, in every single and individual respect here is a much greater, bigger and better car at a reduced price.

This is only another demonstration of how big production will cut costs. For, instead of building 40,000 cars as in 1913, this year we will build 50,000 cars. This is the world's largest production on this type of car.

One big western dealer is begging our sales department for an allotment of 7,000 cars. Think of this! A single allotment greater than the individual outputs of over 50% of all the automobile factories in existence.

Other dealers and distributors in the big eastern aud western agricultural districts want several thousand cars apiece. Such is the initial demand for the newest Overland.

As we have told you in the past, the combined buying power of thousands lowers the cost for each individual. This year 50,000 will be bought. Therefore we can make a greater reduction than ever. Overland quantity production saves money for you—and lots of it. This year it is saving far more than ever before, because in addition to increased production we are building but one chassis.

We urge you to see this new model at once. Feel what a difference the increased wheelbase makes in riding comfort; see the car's changed appearance; examine the beautiful new finish; inspect the many little refinements about the motor—making it resemble the motors in the big $3,000 and $4,000 cars. Examine the tonneau. Enjoy the increased lounging space and the Turkish upholstery.

Look up the nearest Overland dealer. Have a demonstration. Make the demonstration thorough; test the car's remarkable fuel economy. If you want an early delivery do not delay. Act today.

Write us direct for handsomely illustrated 1914 literature—gratis.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St.Louis. The announcement is made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales Horses will be offered in suitable lots and sold at aution for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale ring were originally well-bred Range Horses. The next three Auctions will be held on

Thursday, September 18,
Thursday, October 2,
—and—
Thursday, Oct. 16, 1913,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is good, especially for well-bred Mares and Geldings in fine condition.

Sale of Thoroughbred Horses.

Forty-five stallions and mares from the famous Castleton stud of the late James R. Keene went under the hammer at Madison Square Garden in one of the most successful horse sales ever held in New York. The total sales amounted to $247,200, of which Price McKinney, of Cincinnati, paid $111,200. Colin, at $30,000, purchased by Mr. McKinney; Peter Pan for $38,000, purchased by James Rowe; and Colt, purchased by A. B. Hancock for $20,000, were the features of the sale. Other sales follow:

Stallions.—Voter, John Stanford, $14,000; Disguise, Price McKinney, $5,300; Sweet, C. M. Moore, $17,500; Delhi, Price McKinney, $2,500; Ultimus, Price McKinney, $11,500; Hippodrome, Price McKinney, $2,000.

Mares.—Cap and Bells, Price McKinney, $6,100; Royal Rose, Gifford Cochran, $2,100; Home Rule, Price McKinney, $3,600; Pink Domino, Price McKinney, $7,100; Noonday, Price McKinney, $7,000; Pastorella, E. R. Bradley, $2,000; Gingham, Price McKinney, $6,600; Dominoes, Price McKinney, $3,400; Dreaming, Price McKinney, $2,700.

Cavalry Horses.

The car-load receipts of horses at the St. Louis National Stock Yards include a good proportion of horses suitable for cavalry service. Holland, Nugent & Maxwell Bros. have the contract, and there is a delivery every week or so. The contract is for the purpose of replacing the worn-out and condemned horses of the cavalry service. Cavalry horses are required to be 15.1 to 15.3 hands, with good heads and necks and sound, with the appearance and gaits that suit the service. Thin horses are rejected. All who have mixed loads to ship to St. Louis will find it to their advantage to include some horses that will satisfy government requirements. Address, Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

Top Sale of Cattle.

At the St. Louis National Stock Yards, August 12th, the Milton-Marshall Live Stock Commission Company sold one load of 1,509-pound steers, shipped by J. W. Swetnam, of Randolph county, Missouri, for $8.75 per 100 pounds, which was the top of the market for that day.

A Feeder-cattle Contest.

Each car-load of cattle feeders from yearlings to any older age arriving at the St. Louis National Stock Yards from September 1st to 26th, inclusive, will be examined and judged by Prof. W. J. Kennedy, of Iowa, with a view to his awarding a number of prizes that have been donated for the feeder show. Our understanding is that the cattle will be judged on arrival and will be offered for sale, sold and delivered as usual without delay. The first prize in each class is $100; the second, $65; and the third, $35. There is a sweepstakes prize of $100. There are classes for cattle from Missouri, Illinois, Kansas, Colorado, Oklahoma, Texas and Arkansas. The purpose of the show is to attract attention to the increasing importance of the St. Louis National Stock Yards as a stock cattle and feeder market. All a shipper has to do to enter the contest is to ship the stock as usual and instruct the salesman to enter the car-load in the contest. All awards will be announced on October 6th.

Potash Easily Purchased.

We invite attention to the interesting advertisement of potash salts on page 2. In this connection we desire to say that a few years ago it was with the utmost difficulty that potash salts could be obtained unless mixed with other fertilizing material. But the officials of the German Kali Works decided that it was bad policy to withhold the potash from the farmer and sell it to the fertilizer plants for the reason that very few of the mixed fertilizers contain sufficient potash. Potash is therefore easily purchased by writing direct to the nearest office in the advertisement.

1913 GREATEST ILLINOIS FAIR

Will Be Held at Springfield, Ill., October 3 to 11—Will Eclipse Former Fairs.

The time is fast approaching for the meeting of the Illinois State Fair of 1913.

The prospects for this, the greatest of all annual Expositions, to eclipse all its former efforts are very promising.

It is with pardonable pride that the Illinois State Board of Agriculture presents these to the public inspection, and invites every citizen of this state and all other states to the Fair of 1913.

There is no class of people who cannot attend it with profit to themselves.

It is the greatest laboratory for the observation and study of the best of its kind in every department of agriculture and all kindred interests that is to be found in this or any other country.

The labor-saving devices of the world will be there; representatives, well schooled in their mechanism and uses, will be there, ready to give you any information you may desire.

It is a great post-graduate school for the rapid absorption of useful knowledge for the already well-educated farmer, as well as primary school for those who have not had the advantage of scientific agricultural education.

Here you may see the finished products from the hands of experts, not only in the products of the soil, in the cereals, the grasses and the tubers, and the cultural plants and flowers, but in the culinary and apiary departments and in the textile department, where housewife as well as maiden may revel with pleasure and profit.

One of the greatest exhibitions of the horses, cattle, sheep and swine, as well as poultry, will be there.

Every labor-saving device that has cheapened the production of the necessities of life and raised the calling of the agriculturist from a position of drudgery and hard labor to that of independence and dignity, will be there.

And it is our desire that every citizen may have the benefit of the object lessons to be learned in this great Exposition. It is well worthy of the labor, time and expense. The State Board of Agriculture urges upon all our people to come and learn.—J. T. Montgomery, President.

Horse and Mule Receipts.

So far this year at the St. Louis National Stock Yards, 90,658 horses and mules were received and the shipments amounted to 86,312 head. August arrivals were 9,215 head and shipments 7,383 head. Horse quotations were as follows: Heavy draft, extra, $240 to $275; heavy draft, good to choice, $175 to $225; Eastern chunks, extra quality, $160 to $200; Eastern chunks, plain, $100 to $135; Southern horses, extra quality, $125 to $150; Southern horses, plain, $50 to $75; choice drivers, with speed, $175 to $275; saddlers, $150 to $250; plugs, $15 to $35.

DR. LeGEAR'S ANTISEPTIC HEALING POWDER

The healing power of this famous remedy is wonderful. We have letters from all parts of the U. S. telling of fine animals that have been cured of sores, barbed wire cuts, collar and saddle galls, without leaving a blemish.

Druggists and Dealers everywhere carry a complete line of Dr. LeGear's Famous Stock and Poultry Remedies.

THE INTERNATIONAL SHOW.

The Greatest Live Stock Exposition on Earth—Premium List Ready.

The classification list of the International Live Stock Exposition to be held November 29th to December 6th, 1913, is already issued and available by writing to Mr. B. H. Heide, Secretary, Union Stock Yards, Chicago, Ill.

The premium list contains particulars of all the usual awards, and we are pleased to find that additional awards are numerous This is especially true of class for draft horses in harness and classes covering ponies. In draft horses alone the additional money represented is $1,950. Futurity classes for Clydesdales, Percherons, Shires and Belgians will arouse great interest in American-bred yearling stallions and mares. Every stockman who may possibly become an exhibitor should write at once for the premium list.

WESTERN RANGE HORSES

In order to show our readers how these horses sell we publish a complete list of those sold on August 21st, as follows: Eleven head mares, three to five-year-olds, 1,150 to 1,300 pounds. $97.50; thirteen head mares, three to five-year-olds, 1,050 to 1,200 pounds, $84; twenty-seven head, eleven mares, yearlings and two-year-olds, $60; seven head mixed, yearlings and two-year-olds, $24.50; fourteen head mares, three to six-year-olds, 1,200 to 1,300 pounds, $95; four head mares, three to five-year-olds, 1,050 to 1,250 pounds, $82.50; eight head mares, two to six-year-olds, 1,000 to 1,100 pounds, $60; five head mules, three-year-olds, $75; twenty-four head mares, three to six-year-olds, 1,000 to 1,100 pounds, $62.50; seven head mixed, three to six-year-olds, 900 to 1,000 pounds. $45; ten head, eight mares, yearlings, $32.50; twelve head mixed, two and three-year-olds, $41; four head mixed, $66: twenty-five head mixed, three to five-year-olds, 1,000 to 1,100 pounds, $70; twenty-two head mares, three to five-year-olds, 950 to 1,050 pounds, $55; thirteen geldings, three and four-year-olds, $50; twenty-five head, sixteen mares, three to five-year-olds, 900 to 1,000 pounds, $55; twenty-three head, eighteen mares, three to six-year-olds, 850 to 1,000 pounds, $43; twenty-four head, seventeen mares, pounds, three to five-year-olds, 850 to 1,000 pounds, $37.50; nine head mixed, two and three-year-olds, $27: eighteen head mixed, yearlings, $30: twenty-two mixed, yearlings, $25: eight head mares, three to five-year-olds, 900 to 1,000 pounds, $43; twelve head mares and five colts, $35; thirteen head colts. $13; twenty-six head mares, three to five-year-olds, 1,000 to 1,100 pounds, $73; four head mixed, $44; eight head mixed, three to five-year-olds, 900 to 1,000 pounds, $37; three head mixed, $24.50; eighteen head mixed, four and five-year-olds, 1,050 to 1,200 pounds, $80; twelve head mixed, $55; nine head mixed, $49.50; eight head mixed, yearlings. $35.50; four head mares, smooth mouth, 1,000 to 1,100 pounds, $50; three head mares and three colts, $65; four head mules, $86; four head mules, yearlings, $42.50; twelve head mixed, $51.50; eleven head mixed, 900 to 1,000 pounds, $40; eight head mixed, two and three-year-olds, $35; fourteen head, ten mares, 900 to 1,000 pounds, $38; thirteen head mixed, two and three-year-olds, 850 to 1,000 pounds, $35; nine head mixed, two-year-olds, $38; sixty-eight head unbroke, sold singly and in pairs, average price $53.73; sixty-two head, halter-broke, sold singly and in pairs, average price, $46.81. Anyone desiring further information should address J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Feeding Steers Bring $7.60.

The National Live Stock Reporter of August 29th said: "Two loads of good-quality steers were taken back into the country to be fed. They were shipped here by D. L. Stuart, of Phelps county, Missouri, and sold to Pat Cahill, of Fayette county, Illinois, who intends to feed them and market them here later on. The steers were of the mixed variety but mostly 'red.' There were fifty in the bunch and they averaged 1,139 pounds when weighed here. This is the highest price realized for feeding steers on the market since the week of June 28th."

VEGETABLES AT ST. LOUIS.

Wholesale Prices on the First Day of September, 1913.

The following list represents prices paid on the wholesale market for vegetables at St. Louis:

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong To Buy Anything For Rupture Without Getting 60 Days Trial

Depending on leg-strap or spring trusses—like shown below—is little less than slow suicide. They are almost sure to shorten your life. It's next to impossible to make them hold without hurting. They are simply a curse to wear.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drug-stores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23d St., New York City

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MISSOURI NATIONAL CONTEST.

Egg Laying at Mountain Grove, Mo. —Breed Averages—Individual and Pen Records.

Report of First Eight and a Half Months—Seventy Pens, Ten Hens to Pen—700 Birds in All.

Five Hens Pass the 200-egg Mark in Eight and a Half Months—Two Hens Ahead of Lady Showyou—Record of Last Year.

Mountain Grove, Mo., August 23d. —While five hens have passed the 200-egg mark in eight and a half months and two of them have thus far surpassed the record of Lady Showyou for last year, the extreme heat for the entire month has been telling on the hens, causing them to molt earlier than usual and cutting the egg yield. The thermometer registered as high as 105 degrees in the afternoon of one day, a time of day when it usually begins to get cooler. In some other styles of houses it registered as high as 109 and 110 degrees. You can imagine how a hen must suffer when confined in a trap nest on a day like this, even if kept there only long enough to lay. This continued extremely hot weather is unusual for this section. Hens suffer as much from hot weather in summer as from cold weather in winter.

The total number of eggs laid for the eight and a half months amounts to 80,073 eggs. This makes an average of 118 eggs for each hen, good, bad and indifferent. The yield for the month was 9,687 eggs. The average for each breed up to date is as follows:

Breed Averages to Date.

	Eggs each.
30 Langshan hens	132
30 Minorca hens average	124
30 Ancona hens average	122
120 Leghorn hens average	119
120 Wyandotte hens average	117
60 Rhode Island hens average	111
90 Orpington hens average	110
120 Plymouth Rock hens average	106

There is nothing startling about these records, but is is a very good record. It is not the sensational which is looked for in this contest. It's the facts; let the records be what they may. If the hens did no better and did not lay another egg, the lowest average hen has already laid 26 eggs more in eight and a half months than the average Missouri farm hen lays in twelve months.

The silver cup for the best record for July was won by Mrs. Daisy Rose, of Bois d'Arc, Mo., on her pen of Anconas with 210 eggs. The Rose Comb White Leghorns, Pen 10, were only one egg behind them. The remarkable thing about the records for the last few months is the manner in which a pen of Black Minorca hens is laying. Half or more of the hens are about three years old and they have gradually crawled up to fourth place. Buff Wyandottes also went to third place this month. One pen of Buff Wyandottes from Missouri is the third pen in the contest; another pen of Buff Wyandottes from Vermont contains the leading hen, and the third pen of Buff Wyandottes from Missouri contains the third highest individual in the contest. Only seven hens laid in the English pen of Single Comb White Leghorns and one died, but still they made a small gain over the other pens.

The ten highest pen records for eight and a half months are as follows:

Highest Pen Averages, Eight and One-half Months.

Pen.	Eggs.
2—Single Comb White Leghorns, England	1,686
19—Silver Wyandottes, Iowa	1,418
26—Buff Wyandottes, Missouri	1,387
11—Black Minorcas, Iowa	1,386
1—Anconas, Missouri	1,385
20—White Wyandottes, Arkansas	1,376
57—Black Langshans, Missouri	1,369
30—Buff Wyandottes, Vermont	1,368
9—Single Comb Brown Leghorns, Missouri	1,351
49—Black Langshans, Missouri	1,319

Individual Bird Records.

The ten leading hens to August 1st are as follows:

	Eggs.
Buff Wyandotte, Vermont	216
Single Comb White Leghorn, England	206
Buff Wyandotte, Missouri	205
Single Comb White Leghorn, England	204
Single Comb White Leghorn, England	201
Single Comb White Leghorn, England	190
Black Langshan, Missouri	190
Ancona, Missouri	189
Ancona, Missouri	188
Rose Comb White Leghorn, Missouri	188

Highest Pens For July.

The ten highest pens for July were as follows:

	Eggs.
Anconas, Missouri	210
Rose Comb White Leghorns, Missouri	209
Black Minorcas, New York	203
Black Minorcas, Iowa	196
Buff Wyandottes, Missouri	195
Black Minorcas, Missouri	182
Single Comb Buff Leghorns, Missouri	176
Single Comb Brown Leghorns, Missouri	171
Single Comb White Leghorns, California	170
Single Comb White Leghorns, England	157

Three months and a half yet remain of this contest, which is approaching a most interesting stage.

"Capons Are Profitable."

Under the above title we have received from Mr. T. E. Quisenberry, Mountain Grove, Mo., Circular No. 3 of the Missouri State Poultry Experiment Station. It is only a four-page leaflet, but there are nine illustrations, and the operation of caponizing is fully illustrated and explained. It shows the cockerel just ripe for caponizing; the proper method of fastening; the incision properly made; the method of removing the testicles; a stand sometimes used by professional operators; the operation performed by a child; a typical capon; the capon as a foster mother and a double picture of capons ready dressed for market. The way to get a copy of this Circular No. 3 is to mention this paper and write to Mr. Quisenberry for it. It shows how to develop a two-and-a-half-dollar bird from a twenty-five-cent cockerel.

Weight of Growing Ducks.

"Some years ago A. J. Hallock, of Long Island, one of the most extensive duck growers in the country, kept record of the growth in weight of ducklings from shell to market. He found the following averages: Half out the shell, 2¾ ounces; all out of the shell, 2¼ ounces; one week old, 3 ounces; two weeks old, 5½ ounces; three weeks old, 7½ ounces; four weeks old, 1 pound, 3 ounces; five weeks old, 2 pounds, 6 ounces; six weeks old, 3 pounds, 12 ounces; seven weeks old, 4 pounds, 12 ounces; eight weeks old, 6 pounds, 2 ounces; nine weeks old, 7 pounds, 4 ounces; ten weeks old, 8 pounds; eleven weeks old, 9 pounds 3 ounces."—New York Produce Review and American Creamery.

St. Louis County Fair.

A bigger and better programme than usual is offered by the management of the St. Louis County Fair in Creve Coeur Lake Park, September 18-21, the closing date being Sunday. Among the special features will be a convention Saturday of market gardeners and farmers, to be addressed by speakers from the State University and others.

The annual picnic of old settlers will be held Friday, with prizes for the oldest man and the oldest woman attending, a feature that attracts the attention of all the county's pioneers each year.

A contract has been closed with W. T. Miller, of Belleville, for the appearance of the Wild West Show, in which the performers rope steers, ride outlaw broncos and perform other frontier feats.

The speed ring has $250 purses for trotters and pacers, and purses for running horses Friday, Saturday and Sunday. Each day there will be a running race for mules.

Secretary George B. Bowles has received a large number of entries and requests to reserve accommodations for blooded live stock.

Horse Sale in Iowa.

Two farmers stopped to talk crops and the price of potatoes.

"Say, Jim," finally remarked one of the agriculturists, "are ye in the market for a good hoss?"

"Wouldn't mind buying a hoss if it suited me, Jake," responded Jim. "What kind of a hoss is it?"

"It's that little roan mare of mine," answered Jake. "Guess you've seen her, hain't ye?"

"Think I hev," reflectively returned Jim. "Yes, I know her, all right."

"Mighty good little hoss," declared Jake, with a hopeful glance at Jim. "An' she's yours cheap fer a cash deal."

"It's jes' dis way, Jake," said Jim, picking up his lines and preparing to start. "I'd like to have her, all right, an' I'd buy her this mornin', only I hate to bust a dollar."

Too Many Associations.

Peter Radford, of the Texas Farmers' Union, says there are too many agricultural associations, and that duplication is demoralizing.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000

for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ST. LOUIS AS A WOOL MARKET.

A Splendid Receiving and Distributing Center, Where an Average of Twenty-five Millions of Pounds Are Bought and Sold on the Market Each Year.

The largest total of wool received and shipped at St. Louis was 30,865,410 pounds received and 39,819,200 pounds shipped in one year. The average St. Louis wool business for twenty-five years is about twenty-five million pounds.

The receipts are largest in May, June and July, but wool arrives freely from the middle of April until late in August. The outward shipments of wool are more evenly distributed through the year, although July and August appear to be the months of liberal shipments.

To indicate where the wool comes from it is well to state that in the year 1912 the Wabash Western Railway brought in 9,442,360 pounds; the Chicago, Burlington and Quincy Railway, (West), 5,598,940 pounds; the Missouri Pacific Railway, 2,991,580 pounds; the St. Louis and San Francisco Railway, 2,071,430 pounds; the Chicago and Alton Railway (Missouri Division), 1,080,650 pounds; and seventeen other railroads brought in quantities ranging from a few thousand to six hundred thousand pounds.

To indicate the direction of the outward wool shipments, will state that the largest quantities of wool were hauled by the Wabash Eastern Railway, the Southern Railway (East Line), and by the Louisville, Henderson and St. Louis Railway. The Toledo, St. Louis and Western and the Louisville and Nashville Railways each hauled over a million pounds.

Briefly stated, the St. Louis wool market receives very many comparatively small lots of fine, bright wools from within a three-hundred-mile circle and larger units of Western and Southwestern wools from beyond that distance, and, after it is sold locally very much as it is received, it is sent as directly into consumption by the shortest commercial routes.

St. Louis is a quick market, and wool receivers have formed a good custom of selling on the market promptly on arrival. The buyers are kept moving all the time and kept bidding also, for the reason that prompt sales discourage dilatory movements.

By advantage of central location St. Louis is capable of being made the greatest wool market on earth. For the largest quantities of wool it is the most economical receiving and distributing center, but the wool growers have Congress on their hands, and sometimes they ship their wool to market and follow the wool with a shipment of sheep that puts them out of business. Sometime in the future, when the population will be out of proportion to the wool grown in this and all other countries, the ranch country will be absorbed by farming and sheep will again be profitable to be raised—then will St. Louis be in the center of the wool trade, for the reason that it is the center of the country in which sheep raising can be most satisfactorily conducted.

FOR ADVANCED DAIRYMEN.

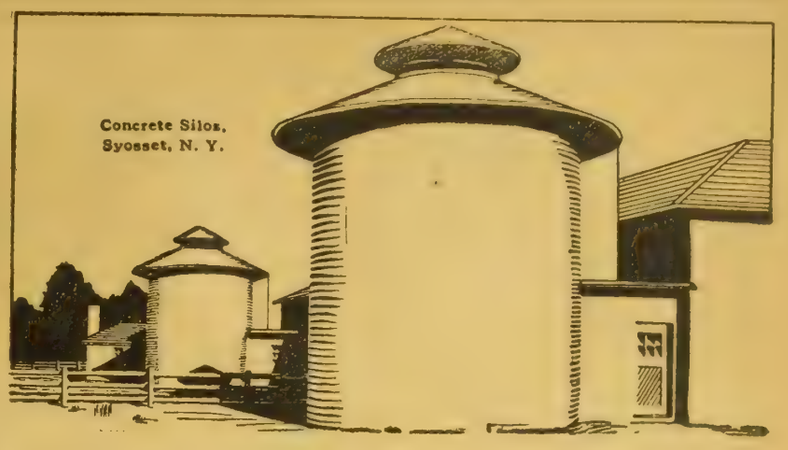
Department of Agriculture Advises That Milk Be Pasteurized at Low Temperatures.

In order to determine the best way of pasteurizing milk so as to kill the disease germs and yet not give the milk a cooked flavor or lessen its nutritive value, the Department of Agriculture, through its Dairy Division, has been conducting a series of experiments, treating milk at different temperatures and for different lengths of time. According to the report on these experiments in Bulletin 166 of the Bureau of Animal Industry, when milk is pasteurized at 145 degrees Fahrenheit for thirty minutes the chemical changes are so slight that it is unlikely that the protein (muscle-building element) or the phosphates of lime and magnesia are rendered less digestible than they are in raw milk.

Moreover, from a bacteriological standpoint, pasteurizing at low temperatures is found to be more satisfactory than pasteurizing at high temperatures. According to Bulletins 126 and 161, where low temperatures are used, the majority of bacteria that survive are lactic-acid organisms, which play an important part in the normal souring of milk. When milk is efficiently pasteurized at high temperatures, the bacteria which survive are largely of the putrefactive kinds, and milk so treated, if kept for any length of time, has a tendency to rot instead of sour. From the standpoint of economy, the technologist of the Dairy Division finds that pasteurizing at low temperatures calls for less heat. It is found that it takes about 23½ per cent. less heat to raise milk to the temperature of 145 degrees Fahrenheit than to a temperature of 165 degrees Fahrenheit. A similar gain is a saving of the ice needed, because it will require 23½ per cent. more refrigeration to cool milk to the shipping point when it is pasteurized at the higher temperature. The Department, therefore, recommends that "when market milk is pasteurized it should be heated to about 145 degrees Fahrenheit and held at that temperature for thirty minutes."

Dried Cantaloupes From California.

On August 14th, from Los Angeles, Calif., it was reported that with the perfection of experiments in progress California will give to the world another luscious dried fruit—the dried cantaloupe. They will turn into profit some of the millions of small cantaloupes left in the fields every year. Cantaloupe growers say the dried variety has a much finer flavor than the fresh fruit.



How would you like a silo

cut smoothly from solid rock? A concrete silo is better than that. Water, acid, air, fire and vermin proof, it keeps silage perfectly, and we can *prove* it.

In a concrete silo, you've got to be sure of your cement. The engineers of the great Mississippi Dam at Keokuk, Ia., are buying 700,000 barrels of Atlas for the work after careful tests of all brands. You can't make such elaborate tests, but *you* can get just the same cement they do. Every handful of Atlas is identical with every other handful. Always absolutely uniform—the same high quality last year—this year—next year. Use Atlas and *be sure* of your cement.

Have you our FREE 168 page Farm Book on concrete work? Write us for it now.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT CO., Dept 165–30 Broad St., N.Y.
Chicago – Philadelphia

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

ATLAS PORTLAND CEMENT

Dry-farming Congress.

The International Dry-farming Congress meets at Tulsa, Okla., from October 22d to November 1st, inclusive. There is also announced a grand display of soil products, and more than a thousand prizes to be awarded.

Fate of Unsprayed Orchards.

John Bland, Secretary of the Missouri State Board of Horticulture, says that unsprayed orchards show heavy losses from codling moth during July and August.

Won the Silver Cup.

At the Missouri National Egg-laying Contest the silver cup for the best record for July was won by Mrs. Daisy Rose, of Bois d' Arc, Mo., on her pen of Anconas with 210 eggs. A pen of Rose Comb White Leghorns was only one egg behind them.

Eradicating the Tick.

That the eradication of the cattle tick has increased the value of cattle $7.00 per head in certain counties of Mississippi is the report of one of the inspectors of the Bureau of Animal Industry, United States Department of Agriculture. The cost to the people for this eradication in twenty-one counties was not more than $100,000. In return they have received during the past year $2,148,839 in increased valuation of their cattle, and this increase will be permanent so long as the counties are free from ticks. The cost of tick eradication was only 50 cents per head.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FARMERS AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS.

This is not a directory of farmers and shippers, but it is a directory for the use of farmers and to all shippers of farm products.

It is not altogether a new publication, but it is appearing under a new name that fully explains what it really is.

Farmers and shippers have need of a directory that will contain the names and addresses of all the seed houses, of all the fruit and ornamental nurseries, of all the live stock trade, of all the produce commission firms, of all the agricultural implement manufacturers, and all other classes of people that deal with farmers and handlers of farm products.

The Hale Publishing Co. is publishing such a book. The next edition will be dated October 1st, but it will be mailed to subscribers in September. Read about it on page 27.

HACKNEY AS SIRE OF ARMY HORSES.

Award of Blue Ribbon to Reginald C. Vanderbilt's Tiger Lillie Discussion Among Horsemen.

"Award of the blue ribbon to Reginald C. Vanderbilt's Hackney stallion, Tiger Lillie, in competition with thoroughbred runners and French coachers as the best sire of army horses caused a lot of discussion among horsemen at Empire City Park. In England and America this particular function was for many years regarded as belonging exclusively to the race horse, but of late the merits of other breeds have been vigorously asserted, and the United States government is now experimenting with trotters, Morgans and saddle-bred sires as well as runners in breeding army horses.

"The Hackney is not included in the list because his is a foreign breed.

"The competition at Empire City Park was not confined to sires of cavalry horses, but was for sires of army horses generally. Curiously enough, not a trotting-bred stallion was shown. For combined substance, agility, stamina and docility the trotter is unsurpassed, if not unequaled, in the opinion of such horsemen as F. M. Ware, the late Charles L. Railey and S. T. Harbison.

"Mr. Ware, who was one of the judges at Empire City Park, believes the trotter is the best and the runner the poorest of all horses for this purpose. He says the modern thoroughbred, evolved by two hundred years of racing, is too tall, light, nervous and delicate to stand the rough work of campaigning in war time. Mr. Ware nevertheless voted for the thoroughbred stallion Uncas Chief at Empire City Park, his two associates selecting the Hackney stallion."

Note.—The foregoing from the New York Herald relates to Tiger Lillie, the stallion whose picture is on our front page.—Ed.

The Manure Spreader.

The advertisement of the I. H. C. Company on page 10 reminds us us that in the beginning manure spreaders were the most difficult to introduce, and now they are credited with being one of the best-paying implements, if not the very best mechanical help on the farm. Every agricultural college in the United States favors the spreader as far more economical and valuable than hand work, even on the smallest farms.

Star Brand Shoes on Sale.

A very large proportion of hides and skins produced by farmers by raising cattle, sheep and goats enter into the making of shoes. Shoemaking used to be an exclusive Eastern industry, and money was expended unnecessarily in freight bills going and coming. Of recent years shoemaking has become a Western industry, and shoes are much better and cheaper by reason of the change, because the waste in transportation and in other ways has been recovered and put into the shoes. Roberts, Johnson & Rand Shoe Company, of St. Louis, have demonstrated that a great shoe business can be built up by them in the West, and on page 9 one of the leading brands is advertised. This firm has cut out the wholesaler's profit as another economy, and sells direct to 20,000 retail merchants, who have proven by handling them that "Star Brand Shoes Are Better." The advertisement on page 9 is worth reading.

The Shire Draft Breed.

Truman's Pioneer Stud Farm, of Bushnell, Ill., report as follows on September 1st:

"It is with pleasure we are able to record that at the Iowa State Fair last week, in the great Futurity Shire Show, the dams of the first-prize colt and the first and second-prize fillies, besides several others in the classes, were imported by us and were purchased by their owners in our regular annual Shire mare sales, and could our Mr. J. H. Truman have been present to have seen his two cups awarded to Messrs. Sizer's colt "Tatton Eldorado" and Frank Huston's filly "Pinecrest Primrose" I am sure he would have been more than pleased, as they are certainly two grand specimens of the Shire breed.

"As usual, we won champion on Shire stallions and mares, together with a number of other first, second and third prizes, and also won first and second on geldings; first for pair of geldings, and our gelding 'Teddy Roosevelt,' recently purchased from Edwin Hobson, was pronounced by Judge Ogilvie the champion gelding of the show. Here is another example of the superiority of the Shire horse in producing the best geldings, as these two colts are three years old and weigh around 2,050 pounds each.

"We are showing at the Minnesota State Fair this week and expect to make an exclusively Shire exhibit at the Indiana State Fair the week following."

LIVE STOCK BREEDERS' CARDS.

CARPENTER'S BEST BARGAINS.

Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Durocs, 100 to 150 pounds. All of the Poland-China Hogs were sired by the great Meddler and Walbridge Boars and from some of the most noted Sows in America. Durocs sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for them and mention this paper.

THE GRANDVIEW BREEDING FARM, Marmaduke, Ark.

324 W. 23d St., New York

NEW CORN GRADES.

Formulated by the United States Department of Agriculture, But Not Yet in Force and Effect.

Under authority from Congress contained in the agricultural appropriation act, which authorizes the Secretary of Agriculture to fix definite grades for grain, the United States Department of Agriculture, through its office of grain standardization of the Bureau of Plant Industry, has completed the necessary investigations to justify the fixing of definite grades for commercial corn. On the basis of these investigations the following tentative grades for corn have been formulated. With the view to having the public fully informed regarding the grades before they are finally adopted, their publication has been authorized by the Secretary. Prior to the final fixing of these grades by the Department a formal hearing will be held in Washington, the date to be announced later.

Commercial Corn Grades.

No. 1 corn is allowed a maximum of 14 per cent. moisture; not over 2 per cent. of damaged corn (exclusive of heat-damaged or mahogany corn); not contain over 1 per cent. of foreign matter (dirt, cob, finely-broken corn, other grains, etc.) and not over 2 per cent. of badly-broken or cracked corn that does not include finely-broken.

No. 2 corn is allowed 15.5 per cent. of moisture; 4 per cent. of damaged corn; 1 per cent. foreign matter; and 3 per cent. of badly-broken.

No. 3 corn is permitted 17.5 per cent. moisture; 6 per cent. damaged corn; 2 per cent. foreign matter; and 4 per cent. badly-broken corn.

No. 4 corn is permitted a maximum of 19.5 per cent. moisture; 8 per cent. of damaged corn; 3 per cent. of foreign material; and 4 per cent. of badly-broken corn.

No. 5 corn is permitted a maximum of 21.5 per cent. of moisture; 10 per cent. damaged; 3 per cent. foreign material; and 5 per cent. badly-broken.

No. 6 corn is permitted to contain a maximum of 23 per cent. moisture; 15 per cent. damaged corn; 5 per cent. foreign material; and 7 per cent. badly-broken.

General Rules and Sample Grade.

Corn in grades No. 1 to 5 must be sweet.

White corn, all grades, shall be at least 98 per cent. white.

Yellow corn, all grades, shall be at least 95 per cent. yellow.

Mixed corn, all grades, shall include corn of various colors not coming within the limits for color, as provided for under white or yellow corn.

In addition to the limits indicated, No. 6 corn may be musty, sour, and may also include corn of inferior quality, such as immature and badly blistered.

All corn that does not meet the requirements of either of the six numerical grades by reason of an excessive percentage of moisture, damaged kernels, foreign matter or badly-broken corn, or corn that is hot, heat-damaged, fire-burnt, infested with live weevil, or otherwise of distinctive low quality, shall be classed as sample grade.

In No. 6 and sample grade, reasons for so grading shall be stated on the inspector's ticket or certificate.

Finely-broken corn shall include all broken particles of corn that will pass through an 8x8-mesh wire sieve, the diameter of the wire to be twenty-five thousandths of an inch.

Badly-broken or "cracked" corn shall include all broken pieces of kernels that will pass through a 4x4-mesh wire sieve, the diameter of the wire to be thirty-six thousandths of an inch, except that the finely-broken corn, as provided for under Rule 6, shall not be considered as badly-broken or "cracked" corn.

It is understood that the damaged corn, the foreign material, including cob, dirt, finely-broken corn, other grains, etc., and the badly-broken or "cracked" corn, as provided for under the various grades, shall be such as occur naturally in corn when handled under good commercial conditions.

Moisture percentages, as provided for in these grade specifications, shall conform to results obtained by the standard method and tester as described in Circular 72, Bureau of Plant Industry, United States Department of Agriculture.

Fertilize as You Sow the Seed.

On page 7 will be found the advertisement of the VanBrunt Drill, which is quite attractively set forth. The intention of the advertisement is to interest you so that you will be prompt in sending for further information. If you write to the good, old, reliable John Deere Plow Company, Moline, Ill., and ask for Book 7 VB, you will receive by return mail the entire illustrated story of Van Brunt results.

A STOCK CONDITIONER.

A Liberal Offer to Farmers Who Are Stock Raisers.

Within a few weeks shoats and young porkers will be taken off pasture and yarded for fattening. If no attention has been given to the worm problem while animals have been filling up on green forage, it would be well for every breeder to take some precaution before putting this young stock on high feed. Worms are gathered freely while stock are on pasture and a change of feed should be preceded by a thorough and systematic effort to condition the herd so as to get the full benefit of the change from green stuff to corn.

Worms in the stomach or intestines can quickly be expelled by feeding Sal-Vet. Such is the opinion of leading authorities who have fed this well-known vermifuge and stock conditioner. In fact, there are thousands of breeders and farmers who would not try to raise stock without it, now that they know its value. The very liberal terms on which any farmer can try Sal-Vet should encourage all who have stock to give it a trial. Hogs, cattle, sheep and horses all need it. For a few pennies a day stock can be kept free from worms and many of the losses that would otherwise occur are prevented.

Animals are allowed to run to Sal-Vet in yard or feeding pens, so no time is lost in dosing or doping animals separately, as some are accustomed to doing. The idea, of course, is to reduce chances of loss by giving all animals access to it, and as Sal-Vet is relished by all stock, they take it freely and condition themselves. We believe every farmer and stockman will find it to his advantage to accept the Sal-Vet offer, which appears on page 5 of this issue.

The manufacturer, Mr Sidney R. Feil, President of the Sal-Vet Company, Cleveland, Ohio, states in his advertisement that he will send enough Sal-Vet to feed any number of stock sixty days before he asks a penny of pay, and that if results are not satisfactory he will cancel the charge. This is a fair and liberal offer and will no doubt secure the attention of hundreds of stock owners who have never had an opportunity of trying this valuable conditioner and worm destroyer. We can heartily recommend Mr. Feil's plan to all our readers. See page 5.—(Advt.)

Goodyear Automobile Tires.

Automobiles wear out tires, that have to be replaced very much as a horse has to be shod. The automobile owner should investigate the tire question before the time comes to buy them, so that he decides in advance what he intends to buy. Automobile tires are now made by experts, and the best makes are well known. Probably the best showing at the present time is being made by the Goodyear Rubber Company, claiming the least cost per mile of any tire that's built. We advise our readers to send to the Goodyear Tire and Rubber Company, Akron, Ohio, and ask for a copy of the Goodyear Tire Book. It tells the whole story of the automobile tire. See page 6 of this edition.

Complete Silos and Lumber.

You can buy a silo, and woodwork for a house or barn, and have the car delivered at your nearest railroad. It is claimed that you get a better, stronger and more lasting silo at a saving of 40 to 60 per cent. on the cost of the average timber silo. Do not hesitate to write to Hewitt-Lea-Funck Co., 499 Union Avenue, Seattle, Washington, and enclose the coupon on page 13. There are distributing centers on all railroads, and you will be dealing with the silo builder and lumber producer direct.

Dittmann (St. Louis) Shoes.

Attention is invited to the card of the Dittmann Shoe Company on page 32. This is one of the great firms that have made St. Louis famous as the largest boot and shoe center in the United States, and the Dittmann Shoes are all sold in retail stores direct from the manufacturer, so that you can find the storekeeper in your home town and have the benefit of the full stock of Dittmann Shoes and sizes. You therefore support your home community in the first place and the industries of the nearest city that buys many million dollars' worth of farm products a year in the second place. The Dittmann Shoe Company has an honorable record of making shoes, and their card in this paper on page 32 is interesting and instructive.

GOOD BOOKS AND PAPERS.

FARM MANURES by Prof. Chas. E. Thorne, Director of the Ohio Agricultural Experiment Station. This work is by a recognized authority. Chapters are devoted to "The Origin of the Soil; the Composition of the Plant; the Feeding of the Plant; the Composition of Manure; the Production of Manure; the Value of Manure; the Waste of Manure, the Preservation of Manure; the Reinforcement of Manure; Methods of Applying Manure; Where to Use Manure; Green Manures; Planning the Farm Management For Fertility Maintenance." The book is illustrated; 242 pages, 5x7 inches; bound in cloth. Price, $1.50. Published by Orange Judd Co., 315 Fourth Ave, New York, N. Y.

AMERICAN JERSEY CATTLE CLUB.—Procedings of the annual meeting held May 7, 1913, are issued. This booklet covers the entire transactions for the advancement of the Jersey breed of cattle during the past year, publication of herd register, prizes offered, books published. Number of native bulls registered in the year ending March 31, 1913, 8,074 head; imported, 29; native-bred cows, 17,233; imported, 390; total, 25,726; increase over previous year, 1,392.

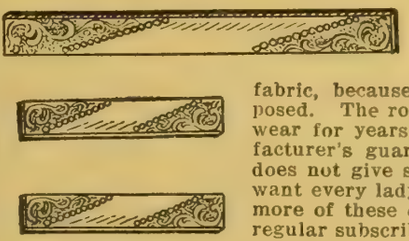
THE GRANGER MOVEMENT.—The first adequate history of the Granger Movement, center about the Order of the Patrons of Husbandry, or the Grange, is to be published September 3d, under the title "The Granger Movement." The author, Dr. Solon J. Buck, of the University of Illinois, presents in a work of particular present-day interest a comprehensive study of this nation-wide organization among farmers for protection and co-operation. The political aspects of the Granger Movement, as well as its connection with the beginnings of railroad regulation and with the co-operative movement in America, are treated at length. The book is published by the Harvard University Press, Cambridge, Mass.

SCIENTIFIC FEEDING OF FARM ANIMALS.—This book is issued by The MacMillan Company, 66 Fifth Avenue, New York City, and the price is $1 75, net. The book is a German work by Professor O. Kellner and translated by Professor William Goodwin, head of the chemical department of the most important English agricultural college. The value of this work can be appreciated from the fact that it has been translated in seven languages. It is a work of four hundred and four pages and it is most thorough in all departments, finishing up with the feeding tables and a comprehensive index. Not everyone will be interested in this work, but all advanced farmers ought to be. It is a standard work of unusual merit.

Rolled Gold Plate Waist Pins

Given as a Free Premium With the Charming Monthly Publication, the UNIVERSAL MAGAZINE.

This beautiful Pin Set, as illustrated, consists of a large Pin (2¼ inches long) and two smaller Collar or Cuff Pins. They are unbreakable, the back being formed of one piece, the rolled gold plate front then being rolled on, making the entire Pin practically one piece. They will not catch in the hair or fabric, because no sharp points or edges are exposed. The rolled gold plate front is warranted to wear for years without tarnishing, and the manufacturer's guarantee is with every Pin, and if it does not give satisfaction it will be replaced. We want every lady reader of this offer to have one or more of these dainty Waist Pins, also to become a regular subscriber to our



UNIVERSAL MAGAZINE.

This publication is a bright, clean, home monthly, containing sixty-four pages each issue of choice short stories, fashions, patterns, poetry and other matter interesting to the household. Send us 30 cents in stamps, money order or coin, and we will enter your subscription for one year to the UNIVERSAL MAGAZINE, and we will send you as a free premium either the one large Pin or the two smaller Pins, as you may select, postpaid; or, better still, send us 50 cents for a two-year subscription and we will send you the full set of three Pins as a free premium. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

"MAKING THE FARM PAY."

"Making the Farm Pay" is a very valuable book for several good reasons:

1. Because it tells you how to care for and enrich your soil, giving the latest ideas in soil treatment and drainage.

2. Because it takes up the proper rotation of field crops for different soils; their adaptation and economic relations, and explains the culture directions of crops.

3. Because it explains fruit culture and forestry, showing how to bud, spray, graft and prune; how to kill injurious insects that affect fruit and shade trees; also insects that destroy field crops and garden products.

4. Because it tells how to make vegetable gardening and trucking pay; how hundreds of dollars can be made, by using proper methods, on only a few acres.

5. Because it tells you how to select and feed farm animals for the greatest net profits, explaining the balanced ration and how much feed and many dollars can be saved by proper feeding. The colored feeding chart, indicating the amount of digestible protein, carbohydrates, fats, ash, water and indigestible residue in principal feed stuffs, is alone worth a ten-dollar bill to a stock feeder.

6. Because it takes up the diseases of farm animals, giving the causes, symptoms and treatments of each, which will save you the loss of many dollars' worth of stock. These are explained in common terms that anyone can read and understand.

7. Because it shows how to make and fill a silo and explains the value of silage to the average farmer. It gives many rules on measuring feed and grain and many valuable hints and helps for every farmer.

8. Because it tells how to make poultry pay and discusses the different breeds—the "sitting" and "non-sitting," the "general-purpose" and "fancy" breeds. The work tells how to caponize poultry, giving illustrations and cuts; also describes the diseases of poultry and their cure.

9. Because "MAKING THE FARM PAY" is written by the best, practical authorities, and takes up improved methods of modern agriculture in all branches of farming. It is written by men who have done what they advise others to do.

10. Because "it is the most in agriculture for the money." It is a ready-reference library in practical, scientific farming, giving you hundreds of money-saving methods and explaining the successful principles that every wide-awake farmer wishes to know—how to make his farm pay.

Our Subscription Proposition.

Anyone who will send one dollar to this office will receive The National Farmer and Stock Grower for two years and can select one copy of the book "MAKING THE FARM PAY," and it will be sent as a subscription premium, by mail, prepaid, safe delivery and satisfaction guaranteed.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find one dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery and satisfaction guaranteed, one copy of the book "MAKING THE FARM PAY."

MADE-OVER CLOTHING.

Industrial Item For the Homestead, Where Economy is Wealth.

Many women look with suspicion on any directions as to making over old clothes, and in the way it is often done the made-over garment shows unmistakably that it was new once in the long ago, even if it has some likeness to the prevailing styles.

This need not be if the article to be made over is carefully ripped apart without cutting the cloth and the threads all picked out, and if there is any accumulation of lint, as is often the case at seams or hems, it should be scraped off with a knife. Then wash in water that has had white soap dissolved in it to make a pretty strong suds. Wash in different waters until perfectly clean, then rinse in clear water to take out the soap and partly dry, ironing on the side that is to be inside of the forthcoming garment. If the goods are black or blue, the rinsing water should be "blue or indigo;" it improves the color.

This mode of washing is suitable to almost every material, all woolens, linens and cottons coming out like new, but some silks will not stand such treatment without being the worse in color and texture, or both. On this account, for silk, I always use gasoline that has been warmed by setting a pan containing it in a larger vessel of boiling water, covering tightly to keep any fumes out of the air, and even then I never let the pan stand where there is a light or an open fire. I rub and shake the silk pieces or garment until the gasoline is soiled, then rinse in clear gasoline and hang out to evaporate. When dry and most of the odor is gone, press with a moderately warm iron. Too hot a one is bad for the silk fibre and it also fades some colors, so that unless you can keep the iron up to the same degree of heat when pressing all the pieces the effect of the goods when made up will be decidedly spotted.

Gasoline will not take out gummy substances nor perspiration soil. For these, alcohol has served me well. I once had a bottle of gum benzoin spilled in a suitcase and most of it was absorbed by a black silk dress, which everyone pronounced hopelessly spoiled. I had noticed that alcohol took out varnish, so bought a half pint and sponged every spot till I thought them all clean, and when the alcohol had evaporated the dress was as good as ever, except some spots that had gotten the worst soaking. These had to be treated again, when they were completely eradicated.

Lace yokes, collars or other trimmings can be cleaned the same as cloth, and, when ripped from the article they have ornamented, should be cleaned at once and put away to be used at some future time for some other garment. I never put the same old trimming on the made-over dress or coat; it seems so much newer if the ornamentation is varied a little. At the present time, with the rage for pipings and buttons, most anything that may be in the house will work in nicely, as both contrasting and harmonizing colors are used and button molds may be gotten of any size that one wants. For wash dresses I always use agate buttons for molds, turning them upside down so that the oval surface of the button will be the top when covered. I prefer them to wooden button molds, because they cannot become water-soaked; this prevents the cloth covering from getting stained, as it sometimes is from the wooden-button molds.

In making over, one has to "cut according to the cloth;" but the present styles are very friendly to the one who is "making auld claes look amaist as weel's the new," the art immortalized by Burns in his "Cutter's Saturday Night," for unless worn so badly that considerable has to be cut away, it is no great achievement to get a whole dress out of a skirt made a few years ago. I have just made over a black-cloth skirt into a one-piece dress, and it is just as pretty as though made up of new materials, as I put the wrong side out. This should always be done if the weave will admit, for any faded streaks will not then show. If the stuff is not pretty on the wrong side, then one must dye over the faded spots; but this is another story.

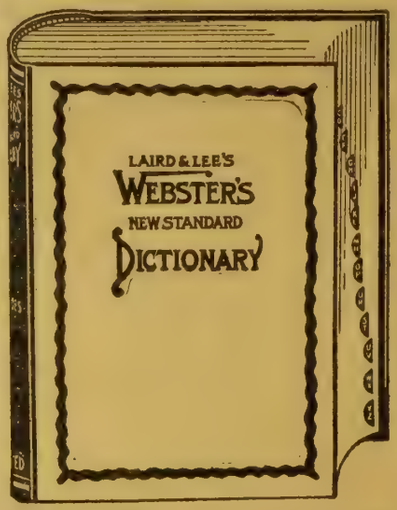
The cheap and well-fitting patterns that now may be chosen from the pages of The National Farmer and Stock Grower are a great help to the one who cannot "cut by guess," as some term this art. The one who has an eye to form can vary the different accessories of the coat or other garment to be made; but even if one must depend wholly on paper patterns, one can change about so that when an article of clothing is worn there need be no fear of meeting its counterpart as to style. I have friends who each buy several skirt and waist or coat patterns and exchange with each other. This gives them a wide selection of collars, cuffs, etc., to select from and gives abundant variety from which to evolve quite original effects.—Cora S. Cornman.

Greatest Value Ever Offered For $1.00

THE VERY BEST MONTHLY FARM PAPER FOR TWO YEARS AND A COPY OF LAIRD & LEE'S

WEBSTER'S NEW STANDARD DICTIONARY

WHICH IS THE MOST COMPACT, USEFUL, HANDY, INSTRUCTIVE BOOK EVER ISSUED BY THE AMERICAN PRESS.



LAIRD & LEE'S Webster's New Standard Dictionary of the English Language — a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces. We are using WEBSTER'S NEW STANDARD DICTIONARY as a subscription premium to the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Largest Makers of Sheet Metal Products in the World

CORN FOR MISSOURI.

Food For Thought When Contemplating the Crop of 1913.

The farmers of Missouri have in the past lost considerable because of the fact that they have not grown corn varieties which were adapted to their respective sections of the state. In many instances, because corn has failed to mature in some certain year, extremely early varieties have been secured, which has materially decreased the yield. A corn variety to give best results in any section should mature early enough to be safe from frost, yet it should be late enough to utilize the greater part of the growing season in order to insure a large yield.

The results of the 1913 corn co-operative tests of the Missouri Experiment Station, conducted in practically all of the counties of the state, show Commercial White to be the highest-yielding variety in the test. There is considerable objection to this variety, however, due to the fact that it is always late in maturing. Good seed of this variety is very hard to secure, however, as few men are growing it. The Boone County White and Reid's Yellow Dent varieties stand next to the Commercial White and seem well adapted to practically every section of the state. The Boone County White has a tendency to be slow in maturing, but does unusually well on the bottom lands and richer uplands of the state. The Reid's Yellow Dent is a variety that will mature practically every year and seems well adapted to lands of average fertility. The Johnson County White takes practically the same requirements as the Boone County White and is well adapted to the better lands of the state. St. Charles White, St. Charles Yellow and Cartner are varieties which have been developed to suit local needs. The St. Charles White seems especially adapted to the Missouri river bottoms as well as to the lowlands of Southeast Missouri. For the better lands of the Ozark region, the varieties recommended for general upland conditions are good, but for the average Ozark uplands, varieties like the old-fashioned Calico or Golden Beauty or the Iowa Silver Mine are preferable.

As a general recommendation, Commercial White, Boon County White and Johnson County White are the white varieties which can be most generally recommended, while Reid's Yellow Dent, St. Charles Yellow and Leaming can be recommended as yellow varieties which will give fair results in practically every section of the state. All of our experiments show that it is a good practice to secure seed as near home as possible, because of the fact that it is more likely to be acclimated.—T. R. Douglas, Missouri Agricultural Experiment Station.

EVERY DAY A FARMER DAY.

Special Effort Being Made to Make the Missouri State Fair a Practical Benefit to the Farmer.

The Missouri State Fair at Sedalia, September 27-October 3, gives wonderful promise of a great exhibition and largely-increased attendance. Coming just before the American Royal at Kansas City, the Illinois State Fair at Springfield and the New State Fair at Muskogee, Okla., and with a largely-increased premium list, all departments of the exhibition will be strong, especially the live stock show. An example of the prospects for the show may be seen in the entry list for the World's Greatest Saddle Horse Stake, in which there have been twenty entries.

In arranging for the coming exhibition at Sedalia, particular attention has been paid to the practical interests of the farmer. The model farm on the Fair Grounds; lectures and demonstrations by the experts of the federal station for the prevention of hog cholera; plowing, dairy and egg-laying contests; the Boys' State Fair School; premiums in canning and breadmaking for girls; and corn growing, stock and corn judging for the boys of the farm; and an especially attractive display of farm machinery will be among the features.

Monday, September 30, will be "Automobile Day," and thousands of automobile parties are expected to visit the Fair and enjoy the special features that have been arranged for that day. Tuesday is "Sedalia Day;" Wednesday, "Agricultural Implement Dealers' Day;" Thursday, "Governor's Day;" Friday, "Missouri Editors' Day;" and every day "Missouri Farmers' Day."

Several thousand dollars have been expended on improvements on the grounds and new buildings and many free amusements have been secured to entertain the visitors, among them Thaviu's Band and Grand Opera Sextette, latest model monoplane, a four-drop balloonist, a splendid racing card and five big acts of vaudeville.

The homes of Sedalia will be thrown open to those who prefer not to stop at the hotels, and an information bureau located on the public square of Sedalia, with a branch office on the Fair Grounds, will furnish messenger service to direct visitors to their destinations and furnish information.

The catalogue and premium list may be secured free on application to Secretary John T. Stinson, Sedalia, Missouri.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Evolution of the Carriage Tire.

(By C. W. Martin, Manager Carriage Tire Department, The Goodyear Tire and Rubber Company, Akron, Ohio.)

"Carriage tires were made for a short period prior to 1898, but in this year the famous Solid Wing Carriage Tire was made by The Goodyear Tire and Rubber Company, Akron, Ohio," says C. W. Martin, Manager of the Carriage Tire Department.

"Nine out of ten people, if asked whether or not they thought the carriage and buggy business was on the increase, would answer that they were positive it was going down hill mighty fast. The data gathered from manufacturers of carriages and buggies proves that conditions are otherwise. They report that business is on the increase, and are enthusiastic about next year's business.

"In the nineties, the idea of applying a rubber tire to a buggy was first conceived. The first rubber-tired buggy was operated in Detroit, and, like the first bicycle, created considerable interest, also comment and criticism.

"Like most all innovations, the carriage tire was considered a fad. However, it has grown remarkably until at the present time it is a staple article.

"The demand for carriage tires is increasing each year, which is proven not only by the number of tires manufactured, but also by statistics from the buggy and carriage manufacturers.

"We entered the field of carriage-tire manufacturing early. Shortly after we invented and placed upon the market the Wing Carriage Tire, which has held an eminent position in this field ever since.

"Carriage tires were not on the market for any length of time until it developed that their construction was lacking in one respect. Dirt and water sifted between the base of the tire and the rim, which caused the fabric to break, resulting in the loosening of the internal wires. This detrimental condition was overcome in the Wing tire. Instead of allowing the sides of the tire to extend directly to the base, we decided to mold that portion fitting in the channel outwardly.

"In this manner the wing of the tire was parallel to the top of the channel, which prevented foreign substances from entering.

"The Wing tire was made and sold as an improvement over the original plain tire. The evidence of its superiority resulted immediately in remarkable sales.

"Approximately half the vehicles manufactured this year will be equipped with Goodyear carriage tires."

Illinois State Fair.

The Illinois State Fair at Springfield will open at Springfield, October 3d and continue until the 11th.

Missouri State Fair.

Don't forget that the opening date of the Missouri State Fair is Saturday, September 27th.

IN CHARGE OF ADVERTISING.

F. W. Heiskell to Direct the Future Advertising Policies of the International Harvester Co.

It has been announced by the management of the International Harvester Company of America that F. W. Heiskell, for two years Assistant Advertising Manager, will succeed M. R. D. Owings as Advertising Manager, and that A. G. Seyfarth, formerly head of the Production Department, will take the position left vacant by Mr. Heiskell's promotion.

Both of these promotions are along the regular civil service system of advancement laid down by the company in building up its organization. Mr. Heiskell began his work in the harvesting machine business twenty years ago, while still a high school boy in Indianapolis, working in the repair room under James B. Heywood, who was guiding the McCormick destinies in Indianapolis at that time. After his graduation in 1895 he was given a permanent position.

He worked his way up from the Repair Department, until in 1906 he was sent to Fort Wayne to be assistant to J. W. Wisehart, who was the International General Agent at that place. The following year he was sent to Akron, Ohio, to establish a Transfer Agency, using the Buckeye plant recently purchased by the International Harvester Company from the Aultman-Miller Company. In 1907 he went to East St. Louis to establish a transfer and distributing house for southwest territory, for the purpose of relieving the congestion at Kansas City. He was later made Assistant General Agent at Indianapolis under "Jess" Everson, which position he was holding when he was transferred to the Chicago headquarters to be Assistant Advertising Manager.

Mr. Seyfarth has been identified with the Advertising Department of the International since its formation in 1903. Beginning as a catalogue writer, he has gradually gone ahead until the last few years he has had charge of the Production Department, which issues catalogues, folders, calendars, the I. H. C. Almanac and Encyclopedia and other literature. He is a University of Michigan man.

Both Mr. Heiskell and Mr. Seyfarth are well known to the trade. They possess the confidence and esteem not only of the fellow-members of the International organization, but of the farm-machine world in general.

St. Louis Wool Market.

On August 30th, at St. Louis, the Missouri, Illinois and Southeast Iowa wools, best grades, were selling at 20 to 21 cents; fair medium, 16 to 19 cents; and heavy wools, 13 to 17 cents; Texas, Arkansas, Oklahoma and Southern wools about a cent a pound lower. There is no activity in wool trading, unless it be at St. Louis, where a good number of buyers are scouting around. Anyone wishing quick information in regard to the wool market should mention this paper and write to A. J. Child & Sons, 515 North Main street, St. Louis, Mo., for the latest wool circular.

Barbed-wire Fencing.

The barbed wire advertised by A. J. Child & Sons, 517 North Main street, St.Louis, Mo., on page 23, was under water a few days in a flood, otherwise it is first-class, new wire. Three thousand reels have been sold and delivered without a single complaint. An opportunity to fence well and cheaply should not be neglected. This is not an advertisement. It is a good news item.

Cement Sidewalks.

"The four principal requirements of good sidewalks are smoothness, non-absorbent of water, durability and low in first cost. The one that comes nearest fitting them all is that of Portland cement construction.

"Care must be taken in the construction of a cement sidewalk, and one of the principal things to consider is the foundation. This has often been entirely neglected with the result that the walk was soon in need of repair. The foundation should be of some material that is easily drained and readily and evenly packed. Broken stones or gravel are often used, but the best results have been obtained by using cinders. An excavation ten inches below the finished surface should first be prepared. In this place six inches of cinders evenly packed to give an even bearing surface for the walk. On this is placed three inches of concrete with an additional inch of cement covering for wearing surface. The foundation should be thoroughly wet before applying the concrete. If the base is allowed to set before the top coat is put on it should be left rough to give a binding surface for the next coat.

"Improper proportioning and mixing of materials and laying in freezing weather often causes failures; but more often we find the failure is due to a poor foundation."—O. P. Pennock, Colorado Agricultural College.

Corn Harvesting Simple.

Attention is invited to the card of the New Process Mfg. Co., Salina, Kas., on page 4. For several years this corn harvester has been advertised with considerable success. It is worth investigating.—(Advt.)

The River Apple Trade.

The first large, full consignment of apples from Calhoun county, Illinois, arrived in St. Louis August 29th, although other boats brought in a few apples earlier in the week. The apple business at Calhoun, Rip Rap and other landings in the district is open in full force. A feature this year is that the freight charges are five cents higher than last year. Steamboat owners are charging twenty cents a barrel. The price last year was fifteen cents. Labor is higher and more scarce, it is said.

A Splendid Seed House.

The A. W. Schisler Grain Company do a splendid business in reliable seeds. It is safe and advantageous to do business with them. Write to the A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo., and ask for the Golden Arrow Seed Catalogue.

St. Louis Root Market.

The roots received from the country shippers were selling as follows on the St. Louis market late in August. Quote by the pound: Golden Seal, $3.75; Lady Slipper, 17c.; Seneca, 50c.; Pink, 32c.; Black, 8 to 9c.; May Apple, 5c.; Snake, 32c.; Black Snake (Echinacea), 10 to 11c.—split half price; Angelica, 5c.; Wahoo—Bark of root, 20c.; bark of tree, 5c.; Blood, 5½c.; Blueflag, 2½c.; Sassafras—Bark of root, 5c.; Wild Ginger, 7c.; Spikenard, 3c.; Skullcap leaves—Bright, 9c.; dark less; Wild Ginseng, $6.75 to $7.00; transplanted, $5.00 to $6.00; cultivated, $3.50 to $4.00.

FOUR BEAUTIFUL FERNS

To be Obtained as Subscription Premium in Connection With either Our NATIONAL FARMER AND STOCK GROWER, a Splendid Monthly Farm Paper, or With Our Monthly UNIVERSAL MAGAZINE, a Gem of a Story and Literary Publication.

NOW IS THE ACCEPTED TIME.

We wish to deliver WITHOUT COST to your door in good, healthy growing condition a valuable assortment of beautiful ferns. We have secured them from fern growers who boast of the fact that their plants are entirely free from all injurious insects or disease which destroy foliage plants of this type, and are assured each individual plant is one of the finest ever produced. There is nothing that will add more cheer to the home through long, dark winter months than a few well-chosen house decorative plants, and those we offer comprised the very best varieties in cultivation, and of a size and quality that will quickly develop into beautiful specimens. We give below a description of each variety:

ROOSEVELT FERN.—This fern is a new variety recently introduced and one of the finest for house decorative purposes grown. It is of compact, vigorous-growing habit, producing in great numbers wide, massive fronds of good length, beautifully tapered from base to tip, that droop gracefully over the pot, hiding it completely from view. The pinnae or leaves of this fern are distinctly undulated, giving the whole plant an attractive, wavy appearance, which adds materially to its beauty. Without an exception, ROOSEVELT has proved the strongest-growing variety ever produced and withstands better than any other variety unfavorable growing conditions of indoor culture found in the average home. A small plant requires but little care to quickly develop into a finished specimen of rare beauty.

BOSTON FERN.—This fern is one of the oldest and best known varieties grown, and in the long years of its cultivation has proven well worthy of a place in every home. It is known by some as the "Fountain Fern," which name it derived from its graceful drooping habit of growth, and until the recent production of the ROOSEVELT Fern was acknowledged the finest of its type. It is a very rapid grower, producing fronds of unusual length, frequently measuring from six to eight feet, and its freedom of growth without special care has made it popular with all who admire beautiful house plants.

THE ROOSEVELT FERN.

WHITMANI FERN.—This charming creation caused a real sensation among lovers of plants, each frond being as delicately and finely cut as the most perfect Ostrich Plume, by which name it is commonly known. It is a very vigorous grower, constantly unfolding new fronds of fine, feathery foliage, entirely distinct from any other variety, and which quickly grows to a width of from ten to twelve inches. The foliage is of good, substantial texture that withstands the abuse to which house plants are subjected, and so compact that each frond appears as one massive Ostrich Plume. WHITMANI is one of the few feathery foliage ferns with which everyone can succeed in growing to finished specimen plants under the average unfavorable growing conditions of the house.

ASPARAGUS PLUMOSUS.—A plant for all purposes, rapidly adapting itself to any conditions. Its rapid, sturdy growth, combined with its exquisite, lacy foliage makes it a plant of such airy grace and value as to be desired by everyone. The bright, rich, green fronds are as fine and delicate as the most beautiful lace, by reason of which it is given the name "Lace Fern."

OUR SUBSCRIPTION PROPOSITIONS.

We publish two papers. No. 1 is the monthly NATIONAL FARMER AND STOCK GROWER, the best farm publication in the United States. It furnishes good, instructive reading that will help farmers, stockmen, poultrymen, dairymen, fruit and vegetable growers in any state. The price is 50 cents a year, and anyone who will send us 50 cents to pay for one-year's subscription can select a set of ferns as a free premium, and we will send them fresh from the fernery, safe delivery in good order guaranteed.

Our second publication is the UNIVERSAL MAGAZINE, a bright, little pocket publication of sixty-four pages, two columns to the page. It contains good stories, poetry, fashions, embroideries, illustrations, and is well worth the price, which is 25 cents a year. Anyone who will send us 50 cents to pay for the UNIVERSAL MAGAZINE for two years can select our set of ferns as advertised, and we will send them at once as a premium, safe delivery and good condition guaranteed. Time is flying. Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SALT AND PEPPER SHAKERS.

The Best Subscription Premium Ever Offered With the Universal Magazine.

The UNIVERSAL MAGAZINE ought to be known by everybody for the reason that it is a nice, bright, cheerful, illustrated monthly magazine of sixty-four pages, two columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication.

When we send out the UNIVERSAL MAGAZINE we also like to send out a useful and meritorious subscription premium with it.

STERLING SILVER THIMBLE.

Given as a Premium With That Nice Family Publication, the Universal Magazine.

Every woman, whether she sews much or little, should have a Silver Thimble. No need to use a rusty steel or dangerous brass thimble, when a Solid Silver Thimble can be had for the cost of packing and mailing.

If you are not now a subscriber to the UNIVERSAL MAGAZINE you are missing one of the most delightful publications, and as a trial offer we will send the UNIVERSAL MAGAZINE for a year and one of these Thimbles for thirty cents in stamps or coin. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of sixty-four pages, two columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication. The sizes of the Thimble are 7, 8, 9 and 10. Order by size. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Rusting of Iron Prevented.

"Rusting of iron and steel is natural and unpreventable, but it can be retarded in its rapidity of formation. On exposure to the weather iron combines with oxygen of the air and rust is formed.

"Water (either as liquid or vapor) and oxygen must be present. Rusting is not merely the simple union of iron and oxygen, but rust is the result of complex actions between iron, water substances dissolved in the water (as soil, dust, etc.), impurities in the iron, etc. In the changes occurring there are formed small electric currents between particles of the iron and of the other substances and oxide of iron results.

"Some substances hasten rusting and others retard it. Those which aid are materials of an acid nature. Some forms of iron do not rust as readily as others. An iron which is worked well in its making and which is comparatively pure is especially resistant to rusting. Substances of an alkaline nature, such as quicklime, soda, caustic soda, potash, often inhibit rusting. A solution of potassium bichromate is especially good."—Raymond Hertwig, Colorado Agricultural College.

Score Cards For the Housewife.

In the judging of culinary products there is great diversity of opinion as to what constitutes an excellent loaf of bread, a glass of perfect jelly or a good cake—as the case may be. This is explained in the fact that we have set up no definite standards of what to expect. The personal element—our likes and dislikes—often affect our decision to the exclusion of judgment that should result from thoughtful consideration. The score cards to follow have been prepared as a tentative standard to "vary from" and as a means of calling the attention of the housewife to the essential points that go to make up quality. This setting up of standards of perfection will result in greater precision in observation and in greater accuracy in judgment.

It should be understood that score cards are not represented to be the one acceptable standard. Knowledge and individual theories may lead one to attach different values to the points named. The score card given herewith has been formulated by the Department of Home Economics at the Colorado State Agricultural College for use in the college classes and in judging at Fairs:

Flavor	35 Points.
Texture	35 Points.
Color	15 Points.
Clearness	10 Points.
General appearance	5 Points.

Flavor.—Of pronounced yet agreeable flavor.

Texture.—Jelly to score high should cut easily with a spoon, breaking with distinct cleavage and holding the form as cut. It should not be syrupy, sticky or tough.

Color.—Pronounced, yet natural—that produced from the fruit, not by the use of artificial coloring.

Clearness.—Free from pulp and bubbles. Transparent and sparkling.

General appearance. — Glasses should be of good quality, shape and size, and should be neatly labeled.

Dressed-beef Movement.

During the month of August St. Louis received a total of 5,690,300 pounds of dressed beef and shipped out a total of 26,102,600 pounds. Last year, in August, 12,685,200 pounds were received and 35,483,200 pounds were shipped out. Generally speaking, arrivals in St. Louis are from the West and shipments are to the East.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

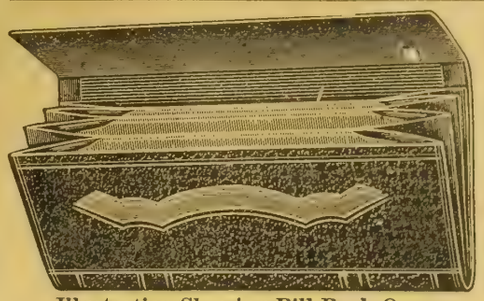

Illustration Showing Bill Book Open.

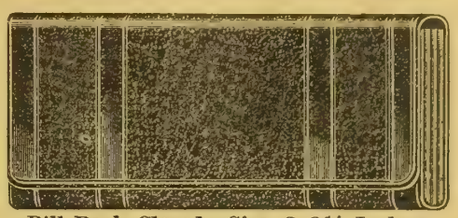

Bill Book Closed—Size, 3x8½ Inches.

Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.

Sprays of Small Daisies.

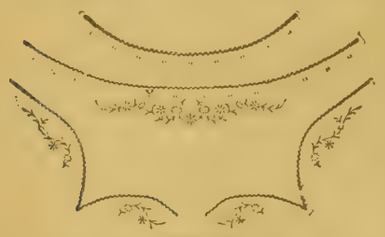
No. 751.—Sprays of Small Daisies. They can be arranged over a blouse or shirt waist; on collars and cuffs; utilized for children's dresses; for pin cushions, handkerchiefs and for a variety of objects.

The leaves and daisies may all be worked solidly, or as eyelets, or the leaves solidly and the daisies as eyelets. The stems are to be outlined

When making solid embroidery, first pad the stamped figure by darning backward and forward, lengthwise, then cover closely with over-and-over stitches worked in the opposite direction from the padding.

To make the leaves and flower petals as eyelets, run a thread round the stamped figure, cut a slight slit lengthwise and then crosswise, push back the material and work closely over and over. Outline the stems by taking short stitches, keeping the needle toward the right and working upward.

Use embroidery cotton in weight adapted to the material.



Night Gown With Short Sleeves.

No. 752.—Night Gown With Short Sleeves. The scalloped edges may be padded and buttonholed; the dots and leaves to be worked in solid embroidery or as eyelets; the stems are to be outlined; the narrow slits for the drawing ribbon are to be made as eyelets.

To pad the continuous scallops rapidly and effectively, cut a skein of thread, apply two or more strands over the center of the stamped pattern, keeping within the lines, tack here and there in couching fashion, gathering the threads closely at each point of the scallops; or work chain stitch between the lines, heavier at the center, lighter at the points; then proceed to buttonhole closely over this foundation. When working solid embroidery, pad the stamped figure by darning backward and forward, lengthwise, and then cover closely with over-and-over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the leaves and slits as eyelets, first run a thread around the stamped line, make a slit lengthwise, push back the material and then work over and over closely. To make the dots as eyelets, first encircle the outline then pierce with a stiletto and work closely over and over.

Use embroidery cotton adapted to the material.

A Child's Sacque.

No. 718.—Design For a Child's Sacque. The scalloped edge is designed to be padded and buttonholed; the sprays of leaves worked either in solid embroidery or as eyelets; the stems to be outlined, and the round dots in solid work or as eyelets.

To pad the scallops, work chain stitch between the lines, heavier at the centers, lighter at the points; or cut a skein of thread, apply two or more strands over the center of the stamped pattern, keeping within the lines; tack here and there in couching style, gathering the threads closely together at each point of the scallops, then proceed to buttonhole closely over the foundation. When making solid embroidery, first pad the stamped figure by darning backward and forward, lengthwise, and then cover closely with over-and-over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the petals and leaves as eyelets, run a thread around the outline, cut a slight slit lengthwise, then crosswise, push the material back on the wrong side and work closely over and over. To make the dots as eyelets, first encircle by running a thread around the outline, pierce with a stiletto and work closely over and over.

Use embroidery cotton in number adapted to the material.

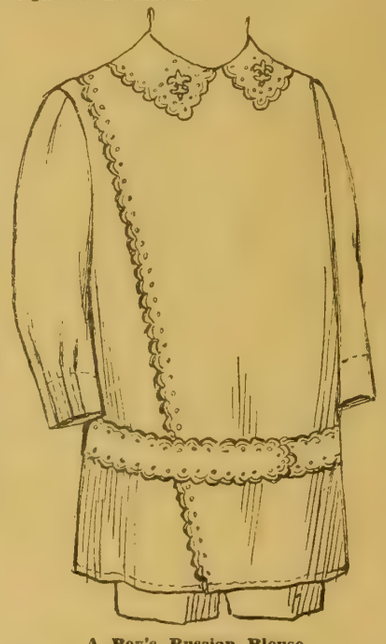
Collar and Cuffs of a Child's Dress.

No. 750.—Design For a Collar and Cuffs of a Child's Dress. The flowers and leaves can be worked solidly or as eyelets. The stems are to be outlined.

When making solid embroidery, first pad the stamped figures by darning backward and forward, lengthwise, then cover closely with over-and-over stitches worked in the opposite direction from the padding.

To make round eyelets, first encircle by running a thread around the outline, pierce with a stiletto and work closely over and over, to make the leaves and flower petals as eyelets, run a thread around the stamped figure, cut a slight slit lengthwise and then crosswise, push back the material and work closely over and over. Outline the stems by taking short stitches, keeping the needle toward the right and working upward.

Use embroidery cotton according to the weight of the material.

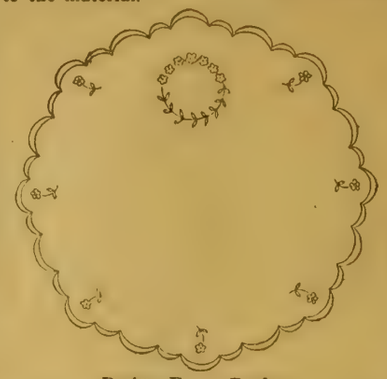


A Boy's Russian Blouse.

No. 753.—Design For a Boy's Russian Blouse. The scalloped edges are to be padded and buttonholed. The dots can be worked either solidly or as eyelets. The fleurs de lis are to be worked solidly.

To pad the scallops, work chain stitch between the lines, heavier at the center and lighter at the points; or cut a skein of thread and apply two or more strands over the center of the stamped pattern, keeping within the lines, tack here and there in couching style, gathering the threads closely at each point of the scallops; then buttonhole closely over the foundation. Make solid embroidery by first darning backward and forward over the stamped figure and then cover closely with over-and-over stitches, working in the opposite direction from the padding. To make the dots as eyelets, first run a thread round the stamped figure, then punch with a stiletto push back the material on the wrong side and work closely over and over.

Use embroidery cotton in weight adapted to the material.



Design For a Doyley.

No. 749.—Design For a Doyley Nine Inches in Diameter. The scalloped edge is designed to be padded and buttonholed; the sprays of leaves worked either in solid embroidery or as eyelets; the stems to be outlined and the flowers small in solid work.

To pad the scallops rapidly and effectively, work chain stitch between the lines, heavier at the center, lighter at the points, or cut a skein of thread, apply two or more strands over the center of the stamped pattern, keeping within the lines; tack here and there in couching style, gathering the threads closely together at each point of the scallops, then proceed to buttonhole closely over the foundation. When making solid embroidery, first pad the stamped figures by darning backward and forward, lengthwise, and then cover closely with over-and-over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the leaves as eyelets, first encircle by running a thread around the outline, cut a slight slit lengthwise, then crosswise, push the material back on the wrong side and work closely over and over. Five transfers are given.

Use embroidery cotton in number adapted to the material.

Each embroidery pattern is 10 cents, and is well worth the money.

Please address all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Woman Who "Always Tells the Truth."

The woman who "always tells the truth" has a habit of announcing the fact wherever she goes, and she usually gives the impression that the truth is a mighty unsavory morsel. Is it not noticeable that the people who make a virtue of telling the truth seem to make it their business to have unpleasant truths to tell?

The woman in question met a little bride on the street. The number of suits this bride has had in her lifetime might have been counted on one hand. But for this once-in-a-lifetime occasion the girl had spent twenty-five dollars on a ready-made grey suit. To her it seemed a small fortune. She was wearing the prized suit when the truthful woman accosted her with: "For goodness' sake, Gertie, go right down town and have that skirt shortened; have it cut off three inches. It makes you look forty years old and grey, too! Why, don't you know that a person with a yellow skin can't wear grey?"

Another woman, who probably never lied, although she made no merit of telling the truth, and who did not parade every unpleasant fact she knew, overheard this but turned aside as though she had not. An hour later, Gertrude, the bride, came to her with eyes suspiciously pink.

"I want to ask you something," she said. "Does this suit make me look awfully old, and does the grey make my skin look more sallow? You know this is what I wore on my wedding trip, and I can't bear to think that I looked a fright and was a disgrace to George all through those two lovely weeks."

The woman well knew that she could have chosen a suit far more becoming to Gertrude's peculiar style, but the suit now belonged to the young bride and had clinging around it some tender memories. It did have merits and on these the woman dwelt, so that the wound Gertrude had received at the tongue of the other woman was somewhat eased.

"That is a beautiful shade of grey, Gertrude, and a lovely piece of material," she said. "You showed taste in selecting a quiet, restful shade, and you look like a dignified little lady in it. I am very sure that George was proud of you every minute of the time. As you wear either a white or an old-rose colored waist with the suit and the grey is not brought near to your skin, you needn't worry for one moment about that color affecting your complexion."

This is only one example of many that might be given of those "truthful," tactless women who go about inflicting wounds where the least they could do would be to just keep still. There are times when unpleasant facts cannot be glossed over, but then it is the tongue of love, and not the sharp, criticising tongue that should deal with these matters. Blessed are those who make a business of carrying pleasant truths. The burdens they have eased, the wounds they have healed, the hearts they have lightened, can never be counted.—Janet Thomas Van Osdel.

Cruelty to Animals.

"Isn't Bugsby the kind-hearted chap who built the luxurious patent kennel for stray dogs?"

"Yes."

"How did it work?"

"After he had been bitten seven times while trying to coax the dogs it enter it the Humane Society locked him up for cruelty to animals."—Cleveland Plain Dealer.

AMERICAN EXTRAVAGANCE.

More Money Expended For Luxuries Than For Food, Clothing and Other Necessaries.

People who are interested in forcing inhabitants of the cities to pay exorbitant prices for farm products are greatly assisted by the sensational reports that are sent out in regard to a possible famine in meat and bread. All these reports being sensational, find ready publication in the daily press, and it is a relief to find that sometimes there is representation of the other side of the subject.

Quite recently Mr. J. J. Pulleyn, Comptroller of the Emigrant Industrial Savings Bank of New York City, published an article containing several startling statements, of which the following are a few samples:

"We pay more money for bartenders than we do for tailors." "The cost of tobacco is more than is paid for butter, cheese and milk." "More money is expended for candy than for paint." "Three hundred million dollars a year are paid for soda water." "The beer bill alone is larger than the bread bill." "The money expended for diamonds and pearls would pay the interest on the national debt."

We are not interested in the extravagances except so far as to publish the statement made by the banker. The people complain of the price of clothing when sheep growers are getting 15 to 18 cents a pound for wool, and 10 cents a pound is a good average quotation for cotton. They complain of the price of bread when bakers are buying 196 pounds of flour for $3.55. They complain that the corn crop is a failure when corn meal in market is selling at less than two cents a pound. Thirty-two pounds of oats at this writing are not netting any farmer over 35 cents. Good, fat mutton sheep can be had alive at four cents a pound; fat hogs at nine cents a pound; breakfast bacon is retailing at 38 cents and cattle on the hoof are two and a half cents lower than at the high time; potatoes at 60 to 65 cents a bushel; onions at 50 cents to $1.10 a bushel; and sweet potatoes at 60 to 90 cents a bushel bring together the rough-and-ready prices of farmers' products, except butter, and the last Elgin quotation at this writing is 26½ cents a pound for the best creamery.

Under cover of the sensational reports regarding one item that may appear high all the others are put up. The Agricultural Department of the United States is trying to establish better methods for marketing farm products. Let the Agricultural Department send bulletins to the city people saying what the wholesale prices are once a month. Let them send these figures to the daily newspapers to counteract the interested reports that are sent out, to show the housekeepers how much margin they are paying over the prices paid to the farmers.

The Commission Returned.

The Commission that went to Europe to find out how the farmers there obtain loans of money at a reasonable rate of interest returned to New York on July 27th.

The Commissioners sailed April 26 for Italy, and in the past three months have prosecuted their studies in Italy, Hungary, Austria, France, Germany, England, Ireland and Wales. Sub-committees were sent to Russia, Denmark, Switzerland, Holland, Belgium, Norway, Sweden, Egypt, Spain and Scotland. In all of these countries the members of the Commission were officially received by the respective governments, and were given every opportunity to carry on their investigation.

Members of the Commission were unanimous in declaring that their mission had been successful. It was announced recently that the Commission had been organized into a permanent body, in order to carry on the work of putting into effect the findings and recommendations which resulted from their conferences.

It is the purpose of the Commission to make a complete report to Congress before the end of the present year, which it is planned shall be the basis of legislation to establish a system of rural credits, as well as other reforms looking toward the betterment of living and working conditions for the rural population of the country.

The Commission addressed a letter to the Governors of the various states and to farmers' organizations and agricultural institutions, describing in part the agricultural organizations which were observed in Europe. In this letter the Commission declares it has been deeply impressed with the vital importance of a thoroughly organized and united rural population.

The Commission expresses the belief that it will be necessary to modify in some respects the European systems which have been studied, in order to adapt them to the needs of American farmers, but the Commission is highly optimistic that the facts they have gathered will be of great value in developing co-operative methods for the farmers in this country.

The Well-written Copy.

As a child of five or six gaily swung herself back and forth in the aisle of a street car, supported by resting her arms on the backs of two opposite seats, a baby in the arms of its mother looked on in silent astonishment, its eyes growing larger with wonder at each new manifestation of her power. Here was something that it had never seen before; that it felt instinctively was quite beyond its power of imitation; and yet the attentiveness which it gave to every motion showed plainly that it would have been only too glad to imitate the stunt.

This is a practical illustration of child life everywhere. Baby tries first to imitate mamma or papa, and when a little larger, every one in its path is writing a copy, it may be unconsciously, which it at once tries to follow. Some of us can remember the copies which our teachers wrote: one in a full round hand, her successor aiming at extreme slant or vertical, with individual flourishes foreign to any standard system of penmanship. And thus the child was continually learning and unlearning in the aim to become a good penman.

We may set our own copies with the utmost care and still find flaws in them. But outside of the immediate family, the baby will look primarily to child life for its patterns; and the single bad habit of some disagreeable boy or girl held up before your baby for an hour may teach a habit that it will take days of patient labor to counteract. The best teacher strives to keep the bad copies entirely out of sight and to present to view only those written in the well-rounded letters which spell character.—Bessie L. Putnam.

Farmers and Good Roads.

During the month of August Col. C. O. Raine, Master of the Missouri Grange, consulted with the St. Louis Conventions Bureau about designating one day as Farmers' Day during the Good Roads Convention in St. Louis next November. Col. Raine will urge each Grange in Missouri to send a representative delegation to the convention, because good roads is an absorbing topic in every rural community. The appeal to Missouri Granges also has been sent out by National Grange Master Wilson, who asks Granges all over the United States to send delegations and work for better roads. Col. Raine left for a tour of Missouri, during which he will visit all Granges and urge the importance of the good roads proposition and the advantage of being represented.

The American Royal Stock Show at Kansas City opens October 6th and continues until October 11th.

PROSPECTUS.

The Farmers' and Shippers' Directory of Business Interests.

A New Publication by the Hale Publishing Co., of St. Louis, Mo.—Corrected, Enlarged and Issued Frequently—Price Only 50 Cents a Copy.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Kick on the Head.

The angry citizen puffed into the office of the city editor.

"See here, sir," he yelled, "what do you mean by publishing my resignation from my political office in this way?"

"You gave the story out yourself, didn't you?" asked the editor.

"Of course I did," replied the angry citizen. "But your fool paper prints it under the head of 'Public Improvements.'"—New York Sun.

Oh, You George!

Grace—"I've had a lovely time. The flowers you sent were exquisite; the box of candy was delicious; I enjoyed the concert so much, and the ride home through the park was simply grand."

George—"May I give you just one kiss?"

Grace—"Oh, George. You are too good to me!"—Chicago Inter-Ocean.

Tabby Couldn't Read.

Mother, to little Ethel, sobbing as if her heart was broken—"Well, well, what is the matter, dear?"

Ethel—"Tabby got losted."

Mother—"Never mind, darling, we'll advertise in the papers for Tabby."

Ethel, still sobbing—"She'll never, never come home, 'cause she can't read."—New York Times.

Dividing the Task.

"The real division of labor, as a husband once put before me, is: 'She says it, and I does it.'"—Bishop of Bristol.

TO LOVERS OF THE BEAUTIFUL.

Picture Premiums to be Obtained by Sending Just One—Only One—Single Subscription to the Monthly Publication Entitled the

UNIVERSAL MAGAZINE

The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated magazine of sixty-four pages, two columns to the page, containing home reading, stories, patterns, current literature, poetry—a splendid publication for the money. To introduce this interesting publication to new readers this year we are offering a premium of

FIFTEEN 5x8-INCH PICTURES.

They are colored reproductions of paintings by the greatest artists; all these fifteen pictures one premium.

Satisfaction guaranteed or money refunded. **ARNOLD WATCH CO., Dept. 928, CHICAGO, ILL.**

PANAMA-PACIFIC.

World's Greatest Exposition Two-thirds Completed.

At this time, one and one-half years before its formal opening day, February 20, 1915, the Panama-Pacific International Exposition is more than two-thirds completed. This estimate is based upon the total amount of work necessary in the complete preparation of the Exposition. Every department of the Exposition is pronopnced by executives familiar with the organization of Universal Expositions to be further advanced than were those of any of the greatest Expositions held in America at a similar pre-Exposition period. Twenty-seven of the world's nations have accepted the invitation conveyed through the Department of State. This record is unprecedented at a time one year and one-half before the opening. Thirty-five states have selected sites for state pavilions. Almost seven thousand applications for concession privileges have been received. The applications for exhibit space would, if all were granted, exhaust the entire exhibit area.

Construction is far advanced. The most difficult part in Exposition building is past. An immense amount of preparatory work has been accomplished. Ten of the fourteen huge exhibit palaces are now under construction. One building, the Service Building, is completed. Contracts for three additional buildings will be let within a short period.

All buildings are being built under time contracts with definite limits for their completion. A number of the most noted sculptors in America have advanced far in the preparation of the sculptural models to be reproduced upon the Exposition grounds. Under the direction of Mr. A. Stirling Calder some of the most important models are being enlarged in the sculptural warehouses.

A phase of the Exposition, in which it will stand alone among all great Expositions of America and Europe, will be found in its representation of the South and Central American republics. These nations will participate upon a great scale.

More than 140 great Congresses and conventions, many of them of international interest and importance, have voted to meet in San Francisco in 1915. This number will undoubtedly be greatly augmented. Many conventions will not take final action until 1914, owing to a usual custom to choose the annual meeting place one year in advance of the time of meeting. To accommodate these great bodies, which will bring together many of the world's most brilliant minds, the Exposition Company voted $1,000,000 for an auditorium at the civic center. The first work upon this building has started.

About 3,500 men are now employed upon the Exposition grounds. The esplanade, to lie before the main exhibit palaces, has been sown to grass. The freight ferry slip at the eastern end of the esplanade is completed and work on the passenger ferry slip is under way. The yacht harbor at the opposite end of the esplanade is practically finished. A considerable portion of the grounds is under railway track and within a short period cargoes may be unloaded at the freight ferry slips and transported by rail to any part of the Exposition grounds. The Exposition Company operates its own railway.

Economical Ways of Women.

"My wife is keen for a bargain," said the man who talks about his family. "What a peculiar woman!" exclaimed the one who has to listen.

"Yes, sir," went on the other, "and I'll just give you an example of how she saves money. Yesterday was her sister's birthday, and her sister lives in the southern part of the state. Well, my wife bought a present to send her, but when I got home last night there was the present all wrapped up but not sent yet."

" 'Why, you ought to have sent that yesterday,' says I. 'She'll get it too late for her birthday, now.'

" 'That's all right,' says my wife. 'I called her up by long distance this morning and asked her to be patient. I told her she'd get it by the sixteenth. You see the package weighs nineteen pounds, so I can't send it by parcels post. And on the fifteenth the new ruling goes into effect by which twenty pounds can be mailed. I save about 22 cents by waiting until the fifteenth.'

" 'How much did the telephone call cost you?' says I. And my wife got mad!' "—Cleveland Plain Dealer.

Could Not Eat Dogs.

Against an old Georgia negro, charged with stealing a pig, the evidence was absolutely conclusive, and the Judge, who knew the old darky well, said reproachfully:

"Now, uncle, why did you steal that pig?"

"Bekaws mah poah family was starvin', yo' honnoh," whimpered the old man.

"Family starving!" cried the Judge. "But they told me you keep five dogs. How is that, uncle?"

"Why, yo' honnoh," said uncle, reprovingly, "yo' wouldn't 'spect mah family to eat dem dogs!"—Harper's Magazine.

Autie Smelled Them.

There is an old lady living in a small town in Southern Pennsylvaina who makes great efforts to keep abreast of the times. Her opportunities, however, are circumscribed, and she is sometimes compelled to resort to her imagination. She went to a church sociable lately, and as she entered the room one of the attendants said:

"Good evening, auntie. I am glad you came. We are going to have tableaux this evening."

"Yes, I know," replied the old lady; "I smelt 'em when I first came in."—New York Globe.

Pills For Souvenirs.

"I tell ye' the new doctor that's just moved to Torpidville is an uptydate feller!" declared honest Farmer Hornbeak, upon his return from the nearby village. "You know, whenever a new establishment starts up it is customary for 'em to hold sort of a grand openin' and distribute soovyneers. Well, this doctor, he held a reception in his new office this afternoon, and gave everybody that attended a dose of pills."—New York Globe.

At the Beach.

"Frank wants to hold my hand all the time."

"Well, is there any harm in that?"

"But I need my hand occasionally. I have to write to Charlie sometimes."—Washington Herald.

They Do Not Speak.

"Once a friend of mine and I agreed that it would be helpful for each of us to tell the other his faults."

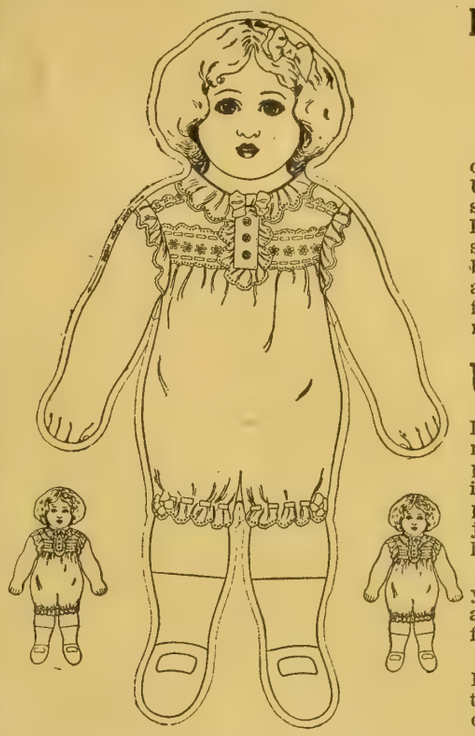
"How did it work?"

"We haven't spoken for nine years."—Chicago Record.

Three Fine Golden Locks Dolls.

One Big Doll and Two Smaller Dolls, Beautifully Lithographed in Five Colors on Heavy Cloth —All Ready to Cut Out, Sew Up and Stuff.

The Big Doll, "GOLDEN LOCKS," is twenty-seven inches tall; so large that baby's own clothes will fit it. There is no more popular plaything parents can give their children or little friends than a pretty Doll, and it is with a great deal of pleasure that we offer these beautiful Dollies in connection with a subscription to the UNIVERSAL MAGAZINE.



How to Get These Three Dollies Free.

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the Universal Magazine, our own publication. It is a sixty-four-page, two-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the Universal Magazine on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo. TO CLUB RAISERS:—Anyone who will get up a club of four subscriptions to the Universal Magazine in accordance with this advertisement will be credited with an extra three-months' subscription to the Universal Magazine and an extra package of needles will be sent for getting up the club. Don't wait. Remember, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Fruitman and Gardener.

We have made arrangements with the publisher of **The Fruitman and Gardener** whereby we can furnish both papers for the price of one. It is a limited arrangement on the co-operative plan that we help each other, giving our efforts towards increasing each other's business. **The Fruitman and Gardener** is all right in

every respect, with a special talent in adapting articles for all climates. No better paper is published for the money, and we have selected it as the best of several that have been offered. Anyone who will send us the usual fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower can select **The Fruitman and Gardener** for one year as a subscription premium. This offer will not last long, for the reason that the number we can accept on this half-price arrangement is small. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE NEW APPLE ORCHARD.

A Few Simple Observations Concerning Pollenization—How to Grow Crops Without Robbing the Land—Value of Deep Tillage.

Every year new apple orchards are being put out. Some of these are set out by men that thoroughly understand the principles on which an orchard should be planted, while more are set out without much regard to some of the most important factors in successful orcharding. Mistakes made at this time are not easily rectified, and it is easier to avoid them in the first place than it is to correct them afterwards.

The soil on which the orchard is to be planted should be well cultivated and drained before the trees are set out. In deciding how far apart the trees are to be placed, it must be remembered that trees need a free circulation of air between them and so should not be set too close together. Where the trees are placed too close together, the branches soon fill up the spaces between them and the wind is checked to such an extent that pollenization is interfered with. We depend on bees to do much of this work of pollenization, but the wind is an additional agent that frequently does more work than the bees. While the bees are an effective agency, they are an unreliable one. At the ends of some winters the colonies of bees are either killed out altogether or so weakened that they are unable to visit more than a small portion of the flowers on the fruit trees. In some neighborhoods very few bees are kept. So all facilities should be offered to the wind to do a part of this work. One large orchard has the trees packed so close together that the central portion of it never bears as good a crop of apples as the outside, and this is charged to the lack of pollenization.

It is impossible to give a rule for the setting of trees, as this must depend on the size of the tree and the habit of growth. Large branching trees should be set thirty to thirty-five feet apart each way, while small trees may be set not farther apart than twenty-four feet. When a man buys his trees he should inquire as to the habit of growth of the variety he has chosen.

After the trees are set, the orchardist should begin the growing of some cultivated crop on the ground of the orchard area, and this should be kept up till the trees come into bearing. Some say: "Do no try to grow a crop on this ground, lest the trees be deprived of plant food and moisture." But the man that sets an orchard in these days is not generally engaged in soil robbing. He expects to manure the land every year, and he should each year put on the ground more fertility than is taken off. In this way he will be constantly improving the soil for the use of the trees. The cultivation of the soil will also let in the air to help set loose the food elements latent in the soil. Under such a regime the trees will grow much faster than they otherwise would and will come into bearing years earlier than they would if they were left to themselves and were given the use of undisturbed soil.

During the first and following years the ground should be plowed deep, and that, too, near the trees, but this deep plowing should be a little farther from the trees each year. The great advantage in deeply preparing the ground for the trees is, that roots that strike deep are less subject to drouth than when they lie near the surface of the soil, and in the case of the deep-running roots the cultivator will not damage them so much in subsequent years.

Sod-binding should be avoided from the very first. Many orchards every year are set out in fields that have firm sod all over them, and only a small space is dug up for each tree. It will be found that the roots hesitate to enter this sod-bound area, and in some cases it will be found that the roots are running around and around in the space that was at first dug up for them. If trees are placed in a field of this kind, the circle of earth around the trees should be enlarged each year by deeply spading and applying fertilizer.

Fruit on the Frisco.

Under the management of Frank Anderson, Director of Development on the Frisco Lines, there is now an exposition car displaying methods of fruit packing and shipping. It started from VanBuren, Ark., August 26th and will stop at numerous towns in Southern Missouri and Northern Arkansas, including Winslow, Elkins, Lincoln, Fayetteville, Springdale, Lowell, Bentonville, Hiwasse, Rogers, all in Arkansas, and Seligman, Monett, Marionville, Republic, Cedar Gap, Mountain Grove, Koshkanong, West Plains and Lebanon, in Missouri. It is the first time that an exhibition car of this kind has been attempted.

The First Evaporated Apples.

The first shipment of evaporated apples of the season arrived in St. Louis August 6th from Southern Illionis. It consisted of three bags of 100 pounds each, shipped by John Soger, if Iuka, Ill., to Jacob Goldsmith & Co., of 204 North Main street. The three bags were sold at auction at the St. Louis Fruit Exchange for 5¾ cents a pound, one cent higher than the price of the first shipment last year. The first shipment this year was about a week early, said to be due to the dry weather.

Helps in the Laundry.

On proper starching the ease of ironing depends, as starch that sticks to the iron can never give satisfactory results, and uncooked or underdone starch will always stick and cause misery to the ironer, and it is a good rule to have the starch boiled steadily an hour before it is strained. After this, some of it can be thinned to the proper condition for dresses, shirt waists and other pieces that require light starching. The proportions for good starch are one measurement of starch to eight of boiling water. Mix the starch first in a small quantity of cold water, then add the boiling water, and it needs to be stirred a few times after it begins to boil.

White clothes should be dipped while the starch is hot, but colored articles require a cool starch to prevent the colors from fading. Make a clothespin apron, as it is much easier to get pins from the pockets of the apron than to stoop every time a garment is hung on the line to get pins from a basket on the ground: and clothespins, basket and line should be washed requently, as they make soiled spots on the clothes unless they are kept perfectly clean.

When washing men's overalls, bedspreads and all such heavy articles, use an old-fashioned churn dash to pound the dirt out with, as this will remove the dirt far better and easier than washing on the washboard. If you have no churn dash, you can make a similar device from a piece of wood an inch thick and at least eight inches in diameter, bored full of half-inch auger holes and tacked to an old broom handle. Lift the article up and down in the hot suds and pound until all soil is removed from the goods.

You can save half the labor of ironing clothes by taking a little more time and pains with the last wringing. Fold pieces so they will go smooth and flat between the rollers.

To wash nice gingham and percale dresses and skirts so they will look like new, pour boiling water on some borax soap and let stand a few minutes or until a good lather is formed, then add as much water as is needed for washing the garments, then put in the pieces and wash quickly through the suds. The borax soap not only softens the water, but it helps to keep the color in the goods, and there is nothing better than the Twenty-mule-team Soap for washing the finest ginghams, and white garments put to soak in this suds for several hours before rubbing them out will come out beautifully white with very little rubbing; and anything that saves rubbing saves the goods, and while soap can be rubbed on all white goods, nice colored goods must be washed in a lather made with the soap.—A. M. H.

He Was a Deadhead.

A country deacon went on a free ticket to a circus entertainment. His pastor remonstrated with him on the wickedness of so doing. The deacon answered:

"Why, you see, pastor, I had a deadhead ticket, and I thought it my duty to go and keep somebody out of that seat who might be harmed by the performance." — Ladies' Home Journal.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 528 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

N. M. Ruthstein "The Steel Shoe Man"

Before you think of buying a pair of shoes, get my free book and learn all about this new steel soled shoe. Learn how one pair will outlast 3 to 6 pairs of best all-leather shoes — how they are being sold by millions all over the world, all because of their economy, comfort and health protection. This book shows the different styles and sizes, for men and boys—and how the shoe is made from 6 to 16 in. high, to suit all purposes of work or outdoor sport.

Saves Health—Saves $5 to $20

No colds, no wet feet, no rheumatism, no corns, no bunions, no callouses, no broken down arches. **Keep the feet powder dry, comfortable and healthy in all kinds of weather.**

One Pair Outlasts 3 to 6 Pairs All Leather

Learn about this shoe with the light, springy, airy "step" - the shoe that rests your foot naturally and comfortably, always holding its shape—never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers, or holes and leaks. For this free book address your postal to

THE MODERN MILKMAID.

"Where are you going, my pretty maid?"
"I'm going a-milking, sir," she said.
"May I go with you, my pretty maid?"
"Get a doctor's certificate first," she said.
"Can't bring bacteria on any terms;
Cows are so apt, sir, at picking up germs;
Take a carbolic plunge and peroxide spray,
Don sterilized rubber clothes; then, sir, you may,
If you can prove that your germs are all dead,
Go with the milking, sir," she said.

"Might I assist you, my pretty maid?"
"Get a lactologist's license!" she said;
"Then I will let you help clean up my stable!
Polish the floors just as bright as you're able;
Bed them well down with sterilized straw,
Germs have a foundness for milk in the raw.

Then treat the cows to a lively shampoo;
A bath in hot water, and carbolic, too.
Polish their teeth with a sterilized brush;
Spray out their throats; and do all with a rush;
Ten billion more germs be born ere you're through;
Get sterilized milk pails and stools for two;
Put a State seal on the sterilized door;
Spray the whole place with carbolic once more:
Then we'll be sure that the germs are all dead;
Yes, you may go with me, sir," she said.
—Toronto Sun.

A VACATION SONG.

Vacation time has come, hey-he,
'Skeeters and sunburns and sprains,
And many a man
With a frying pan
Beats it up from the plains
Into the mountains, up by the snow,
Where the biggest 'skeeters and woodticks grow,
Hey-ho,
Where the biggest woodticks grow!

Vacation time has come, hey-ho,
Boardwalks and flunkeys and bills,
And many a man
Hocks what he can
And beats it down from the hills
To the salted sands where the tangos go
And a square meal costs ten dollars or so,
Hey-ho,
Yes, costs ten dollars or so!

Vacation time has come, hey-ho,
Scatter and chatter and roam;
Let every man
Do what he can
To beat it away from his home.
He will wear off his tummy and scatter his dough,
But what is the difference? He's been on the go,
Hey-ho,
You bet, he's been on the go!
—Ralph Bacon.

THE FATE OF THE BEEF STEER.

Hush-a-by, Long Horn, your pards are all sleepin',
Stop your durn millin' an' tossin' your head,
Wavin' your horns so unrestful, an' sweepin'
All of the beef herd with eyes big an' red.
Mebbe you know when you're pawin' the dust up,
Bellerin' ugly, an' switchin' your tail;
Mebbe you know you are nearing the bust-up,
Nearin' the quittin' place—end of the trail.

Say, it's a queer trail that you've got to foller,
Scattered all over the face of the land,
All of you made into goods but the holler,
Part of you bottled and part of you canned.
Wait till they're through with you—till you knock under;
You've got so ticklish a journey to go.
All of the round-ups between here an' thunder
Couldn't locate you, they'll scatter you so.

You think we crowd you—you'll have to go faster;
You ain't all steak—you'll discover that, too;
Wait till they put your red hair into plaster,
Boil down your hoofs into Stickum's Best Glue.
All of the grief in this world ain't bad weather;
Better lie down there an' take a short snooze;
Wait till they tan your rough hide into leather;
Wait till some feller is wearin' your shoes.

You don't know where you will have to go roamin',
What will be eaten an' what will be worn;
Mebbe some woman in New York will be combin'
Out her back hair with a piece of your horn;
Mebbe the same time your tail will be travelin',
Cooked into soup for some tenderfoot's feed;
Even your tongue will be served up on sinkers;
All of your innards gone on a stampede.
Better lie down there an' rest up, or ranger;
You ain't nigh come to the end of your trail;
Mebbe some woman, to you perfect stranger,
Will brush up crumbs with the end of your tail.
Don't pay to be too durn proud of your beller;
You ain't the only bad steer up north;
Wise to remember that no livin' feller
Ever can tell what a day will bring forth.
—J. W. Foley.

FARM BOYS AND GIRLS.

Natural Ability Compared With City Boys—Value of Open-air Life —Example of Farm-boy Responsibility.

One of the best-known County Superintendents in the United States recently said to the writer: "I am astonished at the great difference there is between the city boys and girls and the country boys and girls as to ability. This applies not only to book study but also to all kinds of manual training. I have especially noticed it in the matters of nature study, the judging of corn and in the teaching of practical domestic science. The minds of the country boys and girls seem to be several years in advance of the mind development in the city boys and girls of the same age."

The speaker had spent a great part of his life as the principal of a big city school in a big city. He had had thousands of city children under him and had been able to form an idea of their development, both as to mind and body. When he became Superintendent of the county schools he was brought into contact with country children. He also had the advantage of having himself been brought up on a farm and had received part of his education in a country school.

Now, why is it that ability to do things is greater in children on the farm than with children of like age in the city? It is due to sun and the wind. Both of these forces are great agencies. The wind brings perfectly pure air for the breathing. The rays of the sun are loaded with life-giving energy. In the city the air is not so pure, and sunshine is largely cut off. Great buildings shade the streets and the children come and go in their shade. Where trees are grown there is additional shade, and where there is neither protection the children can often take a street car and "get in out of the sun." The children live in the shade, walk in the shade, study in the shade. A very large part of their lives is spent indoors, where the air may seem to be carrying its full quota of oxygen, but is not. Nearly all house air has too much carbonic acid, coming from lungs and lamps, and is poorer in oxygen than is out-of-doors air.

The country boy riding a sulky plow can't get into the shade. He has to stay in the sunshine. In all field work shade is an impossibility.

Another great factor making for ability in farm boys and girls is the responsibility thrown onto them at a very early age. This develops the mind. The city boys and girls are coddled too much. They are absolutely unable to act for themselves when children and are brought up as dependents. The writer one day saw a country boy plowing corn. He was riding a sulky plow and driving two horses. It was in a forty-acre field. The boy was so small and apparently young that the writer went over the fence and visited him. That little fellow was only eleven years old, yet he was an expert at cultivating corn. He and a brother nine years old were milking seven cows morning and night. He said he had been milking for four years. Imagine what a sulky plow and a pair of heavy draft horses would do to the ordinary city boy.

But the country boy and girl are not given a fair show. They do not have the facilities for education to which they are entitled. Nor will they have till country schools are consolidated and country children are given an opportunity to develop the mind-power with them.

At the National Dairy Show, October 23d to November 1st, the Dairy Division of the United States Department of Agriculture will give daily illustrations of the value of cows in an experiment showing cost of feed and results.

Thirty-two State and Interstate Fairs will be held during this month.

The Book of EDITION OF 1912. LIVE STOCK CHAMPIONS.

NOW READY FOR DELIVERY.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

One Thousand Champions,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in THE BOOK OF LIVE STOCK CHAMPIONS are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

THE BOOK OF LIVE STOCK CHAMPIONS is published as a Souvenir Supplement to THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements.

AN EXTRAORDINARY OFFER.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to THE NATIONAL FARMER AND STOCK GROWER. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. No finer volume was ever offered. Send One Dollar with your order to

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

For Boys and Girls

Shoes that *look well?* Of course, young folks all *want* shoes that are neat and attractive. When it comes to style, *Nine o'Clock School Shoes* are at the head of the class.

Shoes that *wear?* That is what father and mother have to think about and *Nine o'Clock School Shoes* help to keep the purse strings from wearing out.

NINE O'CLOCK SCHOOL SHOES

are made right in every particular. We call them *Nine o' Clock School Shoes* because *nine* is the children's hour—at nine in the morning they obey the summons of the school bell and at nine in the evening the old Curfew custom says young folks should go to rest—and because we give away large American Flags to schools, we say

"The Flag and the Nine is a Quality Sign"

Quality of material is one of the essentials in children's shoes. The soles are made of extra tough leather, the very best we can buy and cut from the thickest part of the hide. "The Window of the Sole" is our special way of enabling mother to *test* and *see* what kind of shoes she is buying for her children. Lift up the sticker, scrape the surface and prove our claim that the soles of *Nine o' Clock School Shoes* are all leather—and good leather.

They are reinforced, too, just where school shoes are apt to give out. Our invisible clinchers, used in the sole just under the instep, make the *Nine o' Clock* a *no-rip shoe*. The *toes* are made double all the way. The lasts are made on scientific foot-form principles and the whole shoe is shaped to give comfort and support to active little growing feet and ankles.

FREE to Boys and Girls: A valuable book entitled "Our Flag" written by Francis Scott Key III, beautifully illustrated in colors, will be sent FREE upon receipt of 2 cents for postage and your shoe dealer's name

and Stock GROWER

INEXPERIENCED FARMERS.

Some of Their Experiments—How Agricultural Knowledge Must Be Acquired.

Every year multitudes of inexperienced men enter upon the occupation of farming. Our cities are full of men who have their eyes fixed on a future farm. They have been brought up in the city, but they have read about farming and longed to begin a life that seems to them to be ideal. They have dreamed only of the rosy side of farm life. If one tries to point out the darker side, they have an answer that, in their own minds, is satisfactory.

Naturally, this number annually sends out a quota to enter upon the work of soil cultivation. Now, it is only a credit to them that they long for the country life, but it is a pity that they are so sure about the things concerning which they know little, as they are willing only to take advice that accords with their dreams.

One of the common errors of the inexperienced farmer is to begin too large. He is so sure of winning that he plunges in too deep. That very fact often makes his success impossible.

A young city man planned to go into the raising of poultry. He knew nothing about it, but his first move was to build a great ark of a poultry house at a cost of $600. He bought incubators and eggs and began hatching. He knew nothing about temperatures and moisture, and said that his chicks were all born crazy. They "ran round and round and fell over dead," as he described it to the writer. In a little time the experiment was abandoned.

That young man did not know enough to learn how, and he lost $600 in an attempt to do something he did not understand how to do. Had he felt his way along he might have succeeded. It is better to fail in a small matter than in a large one.

Another city man who knew nothing about farming was advised by those who did know something about it, not to go in heavily if he changed from city life to country life. But he had figured it all out and so bought a big farm, paying part for it and leaving himself nothing with which to equip the farm or to live while his crops were growing. In about two years his farm was sold under foreclosure and his family was broken up, the members drifting to different places. He has never recovered from the disaster.

The wife of another city man inherited $40,000, and he went into agriculture on a great scale. His first purchase was of a pair of very expensive carriage horses and some beautiful turnouts. He could be seen driving along the road holding his whip upright and with the heads of his horses high in the air. He tried celery raising on a large scale, but disastrously, and followed that with other experiments, all of which ended in the same way. In ten years he and his family were without money, and they went back to the city.

The trouble with all these people was, that they could not be made to understand that agricultural knowledge must be acquired by actual practice. Any man that goes in heavily and has no experience is on dangerous ground. Experience is the essential requirement for success, though the knowledge obtained from others is a great help. It is no more possible to learn how to farm by reading about it than it is to learn how to swim by reading a book describing the method used in swimming. The instruction helps, but the application must be made in safe water. Experienced farmers can derive great benefit from books because they have sufficient foundation of knowledge to apply the written instruction to advantage.

GET RID OF THE PEST.

Canada Thistle Can Be Eradicated by Clean Cultivation.

Many farmers in their efforts to kill the noxious Canada thistle abandon their efforts with success in sight and the thistles soon recover, says H. R. Cox, in Farmers' Bulletin No. 545, which the Department of Agriculture has recently sent out.

The man is of far more importance than the method in eradicating this weed, which is a pest from Maine to Kansas and in the Pacific Coast States. While the South is not liable to be affected, there seems to be danger of its spreading into the Rocky Mountain States. So serious and so general have its inroads proved that in twenty-five states the thistle is proscribed as a noxious weed and the law directs its killing or destruction in such a manner as to prevent the maturing and dissemination of seed.

Canada thistles can be eradicated in a comparatively short time with little or no loss in the use of the land provided the following rules are observed:

1. Deprive the thistles of their tops continually, thus exhausting the roots. The top of the plant serves much the same purpose as the lungs of an animal, so that if the plant is continually deprived of that it must soon die. There is no one best method of keeping down the tops. Each field must be handled according to circumstances. Usually some form of clean cultivation is the best, either with a crop or by bare fallow.

2. Outline a systematic plan of attack.

3. Keep the plan in mind at all times and follow it faithfully.

Alfalfa, clover, the grasses, millet, sorghum, hemp, buckwheat and small grains are all crops adapted to the purpose of smothering the Canada thistle. They restrict the top growth of the thistles by shading them and also crowd the roots. Alfalfa is probably the best for this purpose. The land should be occupied by such crops at all times so that the thistle may have no chance to recover. This method is of most value in giving the weed a setback which renders easier the work of clean cultivation which should follow.

The method of salting the thistles in pastures is adapted to small patches accessible to live stock, especially sheep. In their efforts to get the salt the stock nibble the thistles and trample them to death. It seems best to let them grow until they start to bloom and then cut off the tops close to the ground and apply a small handful of salt to each new shoot that springs up. Permanent eradication of this weed by plant poisons has not proved very practicable.

Thistles that occur on waste lands may be prevented from maturing if their tops are cut off just as the blossoming starts. Two cuttings a year are usually necessary to prevent seeding. Thistles in such locations, however, can be entirely eradicated if the work is thorough. Various types of cultivators equipped with knives or sweeps that are effective in cutting off the tops of Canada thistles are shown in the new bulletin by the department's agriculturist.

"Stronger Than The Law"

Bring This Advertisement With You

MANY laws have been broken, but this famous work shoe has never been broken by even the hardest wear—that's why we call it the "Stronger-Than-The-Law" shoe.

All the money in the world could not produce a more comfortable or durable heavy work shoe. It cannot be equaled by any other manufacturer.

Take a knife and cut it to pieces if you wish, and you will find it honestly made of good leather, through and through. No substitutes for leather are ever used.

The uppers are made of Chrome Tanned Leather—as nearly water-proof as leather can be made. The counters, heels and double soles are of the finest sole leather. The "Stronger-than-the-Law" shoe is put together so it won't rip. It will keep your feet dry and give you double wear. It is comfortable and good looking—the strongest and longest wearing shoe known. Beware of imitations. No other work shoe in its class is "just as good."

"Stronger-than-the-Law" shoes are made in regular heights and high cuts. Men's, Boys' and Youths' at $2.50 to $6.00. Also for Women, Misses and Children at $1.50 to $2.75.

These and other "Star Brand" shoes—over 750 styles—are sold by 20,000 good merchants. Go to the "Star Brand" dealer and see a "Stronger-than-the-Law" shoe cut up so you can see just how it is made.

Don't buy shoddy shoes at any price. Always insist upon having "Star Brand" shoes with our name on the sole and the "Star" on the heel.

TO FILL PORES IN THE WALLS.

Concrete Silos Should Be Coated With Coal-tar Mixture.

The field men of the dairy farming investigations of the United States Department of Agriculture have recently been giving careful attention to methods of improving concrete silos so as to prevent the drying out of silage near the walls and to protect the concrete from the action of silage juice.

They find that the concrete silo has given universal satisfaction among the farmers, provided it is properly built, of good material, well reinforced and set on a good foundation. The walls, however, as ordinarily built, are porous, and silage near the walls of the silo is apt to dry unless the inside of the silo is given a coating of some material that will fill the pores in the concrete. In the case of a large number of concrete silos in the South and West the field agents of the division applied with a brush an inside coat of raw coal tar thinned with gasoline. This coat made the silos air-tight and also protected the concrete from the action of the silage juice.

Silage juice, in some cases, affects concrete very little, but in other cases, especially in silos in which broken limestone was used for aggregate, the corrosive effect of silage juice is quite marked, especially around doors which do not fit tightly.

Coal tar thinned with gasoline seems to afford excellent protection to keep the acid from affecting the concrete. If corn has been cut at the right stage and is of the right degree of maturity and the silage is well packed, there will be very little, if any, spoiled silage near the walls. Coal tar can also be used successfully for coating the inside of stave silos.

1000% Returns From

the use of a Hercules Stump Puller. Bumper crops instead of stumps. Big money in place of taxes. $1,200 from 40 acres the first year—$750 in extra crops every year after. Get the catalog of the

WARNING TO FRUIT GROWERS.

No Serum For All Fruit Tree Complaints.

The attention of the Missouri Agricultural Experiment Station has been called to what seems to be an organized attempt to hold up Missouri fruit growers by offering them a worthless mixture which is guaranteed to cure all complaints of fruit trees. The first reports came from the vicinity of Moberly, Mo. Similar reports have come from other states in the West.

Those attempting to sell this serum pose as authorized representatives of the West Virginia Agricultural Experiment Station, and in order to make their business bear more weight they claim to be cooperating with the United States Department of Agriculture and the Missouri Agricultural Experiment Station. These men are openly violating the federal insecticide law which was passed two years ago, and are thereby laying themselves liable to fine and imprisonment.

It is the duty of the Missouri College of Agriculture to investigate and recommend remedies for pests and diseases attacking fruit trees in Missouri. Fruit growers are warned against spending money for any quack serum which is guaranteed to cure all complaints. Each particular pest and disease requires a specific treatment, and there is no such thing as a serum that will cure all complaints, such as blight, borers, cankers, etc. An attempt will be made to run down and prosecute these men should they continue to violate the law. Farmers and fruit growers should promptly notify the Missouri College of Agriculture at Columbia of any attempt to sell this quack remedy.—L. Haseman, Missouri Agricultural College.

Some Reasons Why Fruits and Vegetables Spoil.

All about us in ground, water and air are numberless little plants called moulds, yeasts and bacteria. Most of them are only visible by aid of a microscope. Some of these little plants do well in one kind of soil or atmosphere, while others require environment of an entirely different nature.

The souring of milk, the working of canned fruits, the decay of canned vegetables and meats, the change of cider into vinegar, etc., are all due to the presence of certain of these plants.

The fact that they are too small to be seen as they pass through the air explains why so many people believe the air itself causes the working of canned goods.

It has been found, however, that it is possible to keep canned goods without sealing in the usual manner by simply filtering all the air which reaches them. For example, take a can of peas, seal it with a plug of cotton instead of the usual lid, then heat it until all the germs are killed and the vegetables will keep without spoiling, because, while the air can pass in and out of the jar, the plants causing the damage are strained out. Experiments of this kind have proved in different laboratories that it is the inhabitants of the air and not the air itself which causes decay. — Miss Grace Smiley, Colorado Agricultural College.

Condition of Barley.

According to the most recent report of the Department of Agriculture at Washington, D. C., the status of the barley crop is as follows: Condition—73.4 per cent. of a normal at time of harvest, compared with 74.9 per cent. on August 1st; 88.9 per cent. at time of harvest last year, and 81.1 per cent., the average condition at time of harvest for the last ten years.

The indicated yield per acre, estimated from condition reports, is 23.2 bushels, compared with 29.7 bushels harvested last year, and 24.5 bushels, the average yield of 1908-12. On the planted area, 7,255,000 acres, it is estimated the final total production will be about 168,000,000 bushels, compared with 224,000,000 bushels harvested last year, and 160,000,000 bushels harvested in 1911.

Oats Crop of 1913.

According to the United States report, dated September 9th, the condition of oats was 74 per cent. of a normal at time of harvest, compared with 73.7 per cent. on August 1st; 92.3 per cent. at time of harvest last year, and 79.3 per cent., the average condition at time of harvest for the last ten years.

The indicated yield per acre, estimated from condition reports, is 27.8 bushels, compared with 37.4 bushels harvested last year, and 29.7 bushels, the average yield of 1908-12. On the planted area, 38,341,000 acres, it is estimated the final total production will be about 1,066,000,000 bushels, compared with 1,418,000,000 bushels harvested last year, and 922,000,000 harvested in 1911.

Buckwheat Also Declined.

The month of August, among other things it has to answer for, is a decrease in the buckwheat crop of 1913. The September report issued on the 9th, but actually based on the 1st, placed the condition at 75.4 per cent. of a normal, compared with 85.5 per cent. on August 1st; 91.6 per cent. on September 1st last year, and 87 per cent., the average condition on September 1st for the last ten years.

The indicated yield per acre, estimated from condition reports, is 18.2 bushels, compared with 22.9 bushels harvested last year, and 21 bushels, the average yield of 1908-12. On the planted area, 841,000 acres, it is estimated the final total production will be about 15,000,000 bushels, compared with 19,000,000 bushels harvested last year, and 18,000,000 bushels in 1911.

YES, MADAM—this new and beautiful "NATIONAL" Fall Style Book is *free* to you—*your* copy is waiting for you to write for it.

Yours simply for the asking—but what a world of Delight, of Beauty and Money-Saving it brings to you!

The "NATIONAL" Style Book FREE

Your new "NATIONAL" Style Book is ready. What possibilities that opens for you! How much more becomingly and stylishly you may be dressed. How much better fitting clothes and more beautiful clothes are ready for you—and, best of all, what saving it offers you.

It's filled with the very latest fashions and bargains like these:

Waists - $ .46 to $7.98
Silk Dresses - 5.98 to 21.75
Ready-Made Suits 9.98 to 18.98
Hats - - - .59 to 7.98
Ladies' Coats - 4.98 to 26.00
Ladies' Shoes - .79 to 4.98
Silk Dresses for Misses and Small Women - 4.98 to 12.98
Coats for Misses and Small Women - 4.98 to 15.98
Suits for Misses and Small Women - - 8.98 to 17.50
Boys' and Young Men's Clothing - - - .49 to 12.98
Children's Dresses - .79 to 6.98
Children's Coats - 3.98 to 7.98

Also a full line of Underwear, Hosiery, Scarfs, Veils, Gloves, Leather Goods, Jewelry and a complete line of Boys', Misses' and Children's Wearing Apparel.

CENTERING AT TULSA, OKLA.

Dry-farming Congress and Exposition to Open October 22d, 1913.

The International Soil Products Exposition, to be held at Tulsa, Okla., in October, in connection with the International Dry-farming Congress, will be a veritable World's Fair for farmers.

When the gates are opened on October 23d there will be on show good crops from practically every continent on the globe, as well as from eighteen Western States and four western provinces of Canada. Never before in the history of this country have so many states and nations taken part in an exclusively Agricultural Fair and Exposition.

Chinese farmers will bring an exhibit nearly 15,000 miles to Tulsa to compete with the farmers of Oklahoma, Kansas and Texas on the same crops as are grown in the states named. The exhibit from China will consist largely of cotton, corn, Kaffir corn, milo maize, millet, kaoliang, wheat, rye and barley.

Wheat from a number of foreign countries will compete with the wheat of the United States and Canada for world supremacy and for the $1,250 threshing machine given by the Rumely Company for the best bushel shown. Cotton from California will fight for prizes with the cotton of Oklahoma and Texas. Corn from Mexico, where the stalks grow sixteen feet high and two crops are raised in a season, will be shown in competition with other corn from the best farms in the South and Southwest. Oats from Russia, Australia, Saskatchewan, Oregon and Utah will contest for world's prizes with the oats of Kansas and Oklahoma. Every conceivable farm product grown in Western America will be exhibited.

The United States government is spending $20,000 on an enoromous exhibit of the work which is being done by the Department of Agriculture. The people of Saskatchewan, Canada, are spending as much, and the province itself has asked the Exposition management to furnish a building 60 by 240 feet in size for the Saskatchewan exhibit alone. The Canadian Show will be the finest and most elaborate ever given on the south side of the international line. Kansas, Texas, New Mexico, Arizona, Utah, Nevada, Idaho and California are expected to have official state exhibits.

The Exposition buildings and grounds will occupy 120 acres, seventy acres of which will be given over to a complete Farm Machine Show and tillage and power demonstration. Every farm implement used in the West and Southwest will not only be shown, but will be operated by skilled men. Up-to-date methods and machines for cultivating, planting and harvesting will be shown daily in actual operation, just as on the farm and in the hands of the farmer himself.

Why Does Celery Go to Seed?

One of the greatest difficulties experienced in celery growing is the production of "seeders." During the summer the plants may send up seed stalks and thus become worthless. The production of "seeders" results from some shock or set-back to the plants. Going to seed is due, in all probability, either to drying out of the young plants in the seed bed, or to chilling of the plants during the early stages of their growth. If the plants are kept in a vigorous condition from the start, not being allowed to suffer from chilling or lack of water at any time, the dangers from "seeding" are considerably lessened. —W. W. Robbins, Colorado Agricultural College, Fort Collins, Colo.

THE MAY BEETLE TO BE FEARED.

Expected to be Unusually Abundant in the Coming Year 1914—Preventive Measures Advised.

Deep Plowing This Fall Will Do Much to Control Common White Grubs of This Beetle Which Seriously Attack Corn, Timothy, Strawberries, Potatoes and Nursery Plants.

A very conservative estimate places the damage to corn, timothy and potatoes in Iowa, Wisconsin and Illinois done by the common white grubs in 1912 at not less than $7,000,000. These states got the worst of it last year. This estimate resulted from a personal survey by John J. Davis, Scientific Assistant, Bureau of Entomology, whose interesting pamphlet on the "Common White Grub" was recently issued as Farmers' Bulletin No. 543 by the Department of Agriculture, and it can be had by writing the Hon. Secretary of Agriculture, Washington, D. C., and asking for it.

Injury was sustained in almost every section of the country north of the Ohio river from the Atlantic ocean to South Dakota.

Observations seems to make it quite certain that in the Northern States the total life cycle of this injurious species is three years. May beetles were unusually abundant in 1908 and 1911 and the grubs caused the greatest damage in 1909 and 1912.

There is a general belief, which is erroneous, that the common white grubs of the field and the white grubs found in manure heaps and rotten logs are identical. The grubs of May beetles are not known to breed in refuse of any kind.

The grub of the Southern green June beetle is also commonly mistaken for the more serious pest. The grub of the June beetle seems to prefer fertilized soils and may also be distinguished from the true white grub by its peculiar method of crawling on its back.

Farmers in the regions infested last year will find it of special value to do deep plowing this fall. Ordinarily the best time to plow is between October 1st and October 15th. The grubs will at this time have changed to pupae and adult beetles. These pass the winter in cells, and if the cells are disturbed their inhabitants will be destroyed.

It is important to remember that plowing should not be delayed until cold weather, for then the grubs will have gone down to their winter quarters beyond the reach of the plow.

An infested field may be thoroughly freed from grubs by pasturing it with hogs, and this method should be followed wherever possible. Hogs will root to a depth of a foot or more in search of grubs.

Domestic fowls, turkeys in particular, if given the run of infested fields when the land is being plowed, will destroy large numbers of grubs. Pasturing of hogs to root out these grubs should not be delayed later than the middle of October nor practiced earlier than April or May, since in winter the grubs are probably too deep in the ground to be reached.

The May beetles usually deposit their eggs in fields of grass, timothy and small grains, especially in the vicinity of timber, where they feed. The crops planted in these fields the year following a season of beetles should be those least susceptible to grub injury. Such crops are small grains, buckwheat, clover, alfalfa and peas. There is no authentic record of the grub attacking these crops. In 1914 a maximum acreage of such crops as corn and potatoes should be planted, as this will be in general a season for beetles rather than grubs. These should be kept thoroughly cultivated during the flight of the beetles (May and June). Land which is planted to small grains, timothy and other crops which cover the ground with vegetation at this time should be planted in fields farthest from trees.

Liberal applications of commercial fertilizer will assist grass in overcoming grubs if there are not too many of them. When a lawn is badly infested, the sod should be removed and the grubs gathered by hand, after which fall plowing will probably prove satisfactory. In Europe cheap labor is often employed to gather grubs after the plow, especially where the grubs are numerous.

OATS MARKET SITUATION.

About Holding Its Own With Former Prices—Decided Improvement Over a Year Ago.

A year ago oats were selling at a cent a pound; that is, 32 cents for a thirty-two-pound bushel. Out if this the farmer paid freight, commissions and all expenses. This not being low enough to suit Congress, they have legislated to induce shippers of oats from foreign countries to come in and reduce the price still further.

But the foreign consignments are not yet admitted free of duty and oats did not stay at 32 cents a bushel.

On September 30th, 1913, cash oats were selling at 42½ cents a bushel, against 32 cents last year on same date, and 46½ cents two years ago.

In regard to the September option that expired by limitation September 30th, it went out at 41⅛ cents a bushel, against 41 cents August 30th, 31 cents a year ago and 45 cents two years ago.

In a little tabulation following right here we show the quotations for December and next May, and the May quotation at 45⅞ cents looks very well as an indication of the future.

Oats Option Quotations.

1913.			1914.
	Sept.	Dec.	May.
May 31	38⅝	39⅛	....
June 30	42⅜	43⅞	....
July 31	41	43⅛	45⅜
August 30	41	43⅞	41
September 30	41⅛	42⅝	45⅞

We do not know nor do we care to advance an opinion in regard to the effect of the admission of foreign grown oats. Big receipts of oats from other countries would make a world of difference. The market as made to-day is based on the sale of only a small percentage of the actual crop, and it will not require such an abundant importation to knock our market into a cocked hat. We take comfort in the fact that on September 30th, at Chicago, at the close of the market, the quotation for oats was 45⅞ cents. The future is not far off.

ST. LOUIS HORSE SHOW.

October 27th to November 1st, 1913.

All farmers, and esepcially those who are stockmen, should come in and attend the St. Louis Horse Show, which begins Monday, October 27th, and continues the whole week. The entries will be large and up to the highest standard. The officers are: G. Lacy Crawford, President; William C. McBride, Paul Brown, Sam Lazarus, Charles A. Stix, A. A. Busch, Martin L. Clardy, Thomas W. Garland, S. H. Britton and Melville L. Wilkinson, Vice-Presidents; James H. Bright, Secretary; and Merritt H. Marshall, Treasurer. The show will be given in the Coliseum, which is a magnificent building for the purpose.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St Louis, Mo.

FARM WITH DYNAMITE

and accomplish more work in removing stumps, rocks, also planting trees, digging ditches, etc., than twenty men. It's effective, safe and easily used; guaranteed Standard Brand; shipped DIRECT from Mill in this state, lowest prices. No salesmen. Established over 30 years. Write for full particulars.
BRUNS POWDER CO.
TERRE HAUTE, INDIANA.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE ARGENTINE MEAT.

Review of the Situation After the Meat is Sold.

The Butchers' Advocate of New York City, September 17th, said:

"Due to the fact that the meat shipment which arrived in New York last week was easily and quickly disposed of, rumors are going the rounds of the meat trade in New York and near-by cities regarding fresh shipments, which are expected to arrive in the course of a few weeks. The first shipment of 1,000 quarters was sold mainly in New York and Philadelphia, the latter city taking 40,000 pounds of it, which was easily disposed of.

It is stated upon good authority that there is a cargo of 5,000 quarters of beef now on the way from Buenos Ayres to New York, sent by the River Plate Fresh Meat Company, one of the largest group of Anglo-Argentine packing companies. This quantity means approximately 1,250 carcasses, which at an average of 750 pounds makes a cargo of 875,000 pounds.

"At the same time there are quite a few importations of Argentine meat coming from London. The trade began during the past summer and is being vigorously followed up. One concern has a contract which calls for 400 quarters a month, extending up to January 1st. There are several other firms operating in a small way in this direction.

"It is believed that the added impetus which this trade has already given the South American cattlemen will lead to an immediate extension of the industry. Among other indications of preparations to raise cattle in South America for the foreign meat trade is the reference made in the annual report of the Brazil Railway Company, published recently. The report of the company, the President of which is Percival Farquhar, New York, says regarding the cattle company organized in connection with the railway:

" 'The total area of land purchased is 8,163,081 acres in the states of Sao Paulo, Parana, Matto Grosso and Minas Geraes. The company at the end of the year had about 200,000 head of native cattle and 915 head of pure-bred imported cattle.

" 'All the lands are well watered and, with the exception of portions here and there in Eastern Matto Grosso, which are covered with valuable hardwood timber, they are excellent grazing lands.

" 'The division of the property into ranches has progressed rapidly, a large amount of fencing has been done, and suitable houses and sheds have been erected.

" 'A contract has been entered into with well-known North American packers to join in the construction of and to manage a modern packing factory at Sao Paulo, so as to obtain a certain market for the company's products.

" 'The importation of pure-bred cattle to improve the native stock has proved a success, the losses from redwater, fever and other diseases which attack all imported cattle being small.

" 'The company will begin to send cattle to market early in 1914.' "

THE ARGENTINE MEAT.

The Views of the Receiver as to the Quality of the Arrivals.

The National Provisioner of September 13th reported that the first big consignment of Argentine beef to come direct to the New York market arrived at the end of this week on a vessel of the Lamport & Holt Line, which runs direct between the River Plate and New York. The lot comprised 1,000 quarters of Argentine beef, and was consigned to B. Frankfeld & Company, who are big meat brokers on the New York Produce Exchange. Mr. Frankfeld stated to The National Provisioner that the beef was of good quality, and he expected it to sell in competition with native corn-fed stuff.

The newspapers exaggerated the facts connected with this shipment. They had a big delegation of meat butchers awaiting the docking of the steamer, and other details which Mr. Frankfeld said originated entirely in the imagination of the reporters. The beef will take the commercial channels, and will go from the importers to commission and wholesale houses to be offered to the consuming trade.

Heretofore Argentine beef arriving on the Eastern markets has been in very small quantities, and reshipped via British ports. This is the first adequate test of Argentine beef importation direct, and the results will be watched with interest.

"The present system puts importers of Argentine beef at a disadvantage," said Mr. Frankfeld. "It isn't beef which has been inspected before and after slaughter by United States government inspectors and cannot be put into regular government inspected houses. Another disadvantage is that the fat of Argentine beef is not permitted to be made into oleomargarine. It can be used only for soap fat. Fat for oleomargarine sells for more than fat for soap making and other purposes and therefore there is a loss.

"We hope that the Department at Washington will arrange to have this difficulty done away with. We hope there will be some solution of this problem after the return of Dr. Melvin, Chief of the Bureau of Animal Industry, who went to Argentine to study their methods of inspection.

"There is a market here for Argentine beef, and I believe the business will develop. The people who have used the beef say it is equal in every respect to the American product. I have tried it myself. The meat is as fine as the domestic product."

Cash Grain at St. Louis.

The following prices were quoted for cash grain at St. Louis on the last day of September:

Wheat.—No. 2 red wheat, 92½ to 95½c.; No. 3 red, 91½ to 93c.; No. 4 red, 88 to 91½c.; No. 2 hard, 87½ to 93c.; No. 3 hard, 87 to 92½c.; No. 4 hard, 85c.

Corn.—No. 2 corn, 72c.; No. 3 corn, 72c.; No. 2 yellow, 72½c.; No. 3 yellow, 72c.; No. 4 yellow, 71c.; No. 2 white, 74c.; No. 3 white, 72½c.

Oats.—No. 2 oats, 42½c.; No. 3 oats, 42c.; No. 4 oats, 41½c.; No. 2 white, 44 to 44½c.; standard, 43½ to 44c.; No. 3 white, 42½ to 43½c.; No. 4 white, 42 to 42½c.; No. 2 rye, 68c.

CORN MARKET SITUATION.

Market For the Present Lower—Market For the Future Higher—Small Future Advance on a Big Decrease in Crop.

Corn is not selling low, but corn has not advanced much by reason of the diminished crop. On August 30th, cash corn at St. Louis was quoted at 74¾ cents, and on September 30th the price was reduced to 72 cents. A year ago the quotation was 69 cents, and two years ago 68½ cents.

At Chicago, September 30th, the September option was closed out at 70⅜ cents, against 69 cents a year ago and 68½ cents two years ago. The September option being now departed, we can leave it in peace.

The December corn option is the next to ripen, and when it ripens on December 31st more will be known about corn then than now. But the December option is not as important as May, which is eight months away. The first we saw of the December option was last May, when on the 31st the quotation was 56⅝ cents. It has now advanced to 70⅝ cents, the quotation at Chicago on the closing hour on September 30th.

We left the May quotation at Chicago on August 30th at 70½ cents, and by September 30th the price had advanced to 72 cents.

For the better understanding of these figures we place a small tabulated statement which show them as follows:

Corn Option, Chicago Basis.

1913.	Sept.	Dec.	May. 1914.
May 31	58¼	56⅝	....
June 30	62¾	59½	....
July 31	66	63	65
August 30	72¾	68⅝	70½
September 30	70⅜	70⅝	72

Here we leave the corn crop and prices until next month. We write these reports once a month on the last day of each month, and those who keep The National Farmer and Stock Grower can keep a better record than is kept by people in the trade.

Captain T. F. Peck, Commissioner for the state of Tennessee, says that commercial fertilizers can be used with profit, and the failures are mostly due to the user and not to the goods.

Dry Farmers to Meet.

The Dry-farming Congress of 1913 and exhibit of farm products will be held at Tulsa, Oklahoma, October 22d to November 1st, inclusive. If all farmers adopted the dry-farming methods crops would be larger. Dry farmers believe in deep tillage, and, what is more important, they practice what they preach.

NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screwdriver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.

Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MAKING AND SAVING MANURE.

The Compost Heap—Value of Forest Leaves—A Few Remarks on a Familiar Subject.

Most people do not appreciate the fact that as much fertility is contained in the common grass, leaves and waste herbage of the farm as in barn-yard manure. The barn-yard manure is in a form in which we are accustomed to think of it as manure, and so we recognize its fertility, while the others are not in that form and do not make the same impression upon us.

The writer recently visited a most remarkable garden, owned and worked by an amateur. This man kept no stock but poultry, and not a large number of fowls. But his garden was a sight to see in its luxuriance. It covered several acres.

He was asked what kind of fertilizers he used and received the reply that he used principally decayed vegetation. He then led the way to beyond a clump of high-growing bushes and pointed to an immense compost heap. Onto that heap went everything that would rot, and during one year he makes provision for the next year.

All the refuse from his garden was carried to this compost heap. All the leaves that fell in the adjacent forest were so utilized, and some of these leaves contain as much as seven per cent. of nitrogen. On the roadside grew sweet clover, and that was cut and piled on the compost heap. Even all the weeds that could be found reached the same resting place. It is astonishing how much such stuff can be discovered in any neighborhood.

The same objections cannot be made to the compost heap in the open air as to the manure pile in the open air, for the new material constantly being put on the compost heap protects it from the sun and the wind, the rotting going on at the bottom. Perhaps, however, the protection of the heap during hot summer days might be an advantage, but in the spring, fall and winter the rain is needed to help along the rotting.

Some farmers are becoming so alive to this value of composting that they haul forest leaves and dump them into the hog yard, where they are soon incorporated with the other manure. Forest leaves especially should not be permitted to go to waste.

Barn-yard manure being compacted and its decay assured should not be exposed to the outside conditions of sun, wind and rain. A good many investigations have been carried on that seem to show that, as a general thing, barn-yard manure kept in the open is worth less than half as much as manure that has been kept under a shed where it would not be affected by sun, wind and rain.

The liquid manure that is almost always allowed to go to waste contains a large part of the total fertility in the voidings of the animals.

If all are saved, the increased value of the manure of a mature bovine is about $4.00 per year greater than when handled in the ordinary wasteful manner.

Cement floors are a great help in the saving of both the dry and liquid portions of the manure, and provisions should be made for running the liquid portions into a cement tank, from which they can be easily removed.

Less Water and More Cultivation.

Those who are unfamiliar with the application of water to crops may get a wrong conception among the real facts as to the proper amount of water necessary to produce a good yield. With a copious application by the flooding method, the top layer becomes saturated and the usual result is a baked surface when the hot rays of the sun strike the moistened soil. This soil layer that has dried or baked under this condition possesses an infinite number of pores or extremely small holes. These apertures act as so many small tubes and the nature of moisture is to follow up these passage ways, as the oil in a wick, and when reaching the surface evaporates, thus a total loss to the use of the plant.

Experience has shown that with some soils, within a period of sixty to seventy-two hours after the irrigation flood method, the plants show that they are suffering from the lack of moisture due to the capillary action. It isn't "more water" that is needed so much as "more cultivation," something that will break up the top layer and produce a mulch. The broken surface will eliminate or to a large degree retard the loss of moisture due to capillary action produced by the hard, dry surface.

Less water may be used to produce crops with more thorough cultivation.—R. L. Parshall, Colorado Agricultural College, Fort Collins, Colo.

ALFALFA SEED PRODUCTION.

By Philo K. Blinn, Colorado Agricultural College, Fort Collins, Colo.

Alfalfa is indispensable to the farmers of the Western States for hay production and for keeping up soil fertility in their crop rotations. The area in alfalfa is rapidly increasing in many of the Eastern States. Consequently, there is a large demand for alfalfa seed for sowing new fields, and each year the supply of desirable seed seems to be more limited.

It has become well established that some strains of alfalfa are superior to others, especially for some localities. It seems important that there should be developed an alfalfa seed-growing industry to furnish a more dependable "home-grown" supply of the best strains of alfalfa seed.

Fifteen or twenty years ago certain districts in Colorado were producing considerable alfalfa seed, even exporting some. Recently the same sections are growing barely enough seed for local demands.

During the early years of alfalfa seed growing in these districts, yields of seed varying from five to ten bushels per acre were quite common. Now it is seldom that a grower can secure a yield of more than three or four bushels of seed per acre. This is especially true on some of the best irrigated land. Such yields are not inducement enough for a farmer on high-priced land to leave a crop of alfalfa to mature for seed.

The question as to why alfalfa is failing to produce seed as abundantly as it did in former years has caused the Experiment Station to devote special attention to the problem. The solution has not been fully reached. But some results of value are reported in Bulletin 191 of the Colorado Agricultural College and will be sent free on request.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.

2516 Railway Exchange, Chicago.

Wheat Crop of 1913.

According to the latest report of the United States Department of Agriculture the most bountiful wheat crop in the history of the country was harvested this year. This was due principally to the bumper crop of winter wheat.

The government estimate of the spring-wheat crop showed increased prospects for that crop, making the total production 243,000,000 bushels, or an increase of 4.3 per cent. over the August estimate.

This increase brought the estimate of the total wheat crop of the country to 754,000,000 bushels, or 6,000,000 bushels more than the great record crop of 1901.

Condition of the Corn Crop.

We all know that the crop of corn for the year 1913 was reduced by the drouth. The extent is officially noticed in the government report that was issued on September 9th, as follows: Condition for the United States—65.1 per cent. of a normal, compared with 75.8 per cent., August 1st; 82.1 per cent. on September 1st last year, and 80.9 per cent., the average condition on September 1st for the last ten years.

The indicated yield per acre, estimated from condition reports, is 22 bushels, compared with 29.2 bushels harvested last year, and 26.5 bushels the average yield 1908-12. On the planted area, 106,884,000 acres, it is estimated the final total production will be about 2,251,000,000 bushels, compared with 3,125,000,000 bushels harvested last year, and 2,531,000,000 bushels in 1911.

Our Industrial Policy set forth on page 15 is interesting.

THE MALTA FEVER.

A Blow at Goat's Milk—Malta Fever Transmitted—Milk Should Be Boiled Before Using.

The Bureau of Animal Industry have compiled a bulletin which is of practical interest to all who raise goats and to such invalids as have been prescribed goat's milk as a diet.

Proofs have conclusively established that the transmission of a fever known variously as "Malta," "mountain," "slow typhoid," or by certain other designations, to man is accomplished by the milk of infected goats.

Careful observation in Texas and New Mexico show that the disease has always made its appearance among people connected with goat raising. Entire families have been taken sick with it on goat ranches. The sickness appears usually after the kidding season, during the months of April, May and June, when the people are in closer contact with the goats.

Observations have also shown that just over the border in Mexico goat herders are not nearly so liable to the disease. Conclusions have been drawn that this is not due to any natural immunity but to the fact that the Mexicans always boil the milk before drinking it, while the Americans use it raw.

The general opinion has prevailed that the United States is free from Malta fever and that the disease has only occurred through importations. However, it now seems evident that the Malta fever has existed in Texas and New Mexico for at least twenty-five years. The fever takes its name from Great Britain's island in the Mediterranean, where the disease has been exceedingly prevalent among British soldiers and sailors. Its occurrence in tropical and subtropical localities has been noted in almost every country. A number of cases have been reported among our soldiers who had just returned from the Philippine Islands.

Pasteurization of infected milk for twenty minutes at 145 degrees Fahrenheit is sufficient to destroy the organism which transmits the disease. Therefore, milk pasteurized for the destruction of typhoid and tuberculosis germs will also be free from the Malta fever germ.

The symptoms in human beings are usually pronounced and give rise to a more or less severe affection. The most striking symptom is an attack of fever with periods of normal temperatures. The duration of these periods varies considerably during the disease. The fever may be remittent or intermittent; it may be continuously high or low, and at all stages of the disease the type of fever may change. It may be very acute from the onset, the fever setting in with chills and rise of temperature associated with headache and pain in the back and a general ill feeling. The pulse and respirations are generally affected in accordance with the height of the fever. The course of the disease may extend for from six weeks up to a year, and cases have even been observed in which relapses have occurred for three years. In human beings the mortality is estimated at three per cent.

In animals the course of the disease always appears to be protracted. Cases have been noted in goats that extended over a period of more than a year. The prognosis in animals is always favorable as far as the health is concerned. But although the disease has no active effect on goats, its eradication must be considered for the public health, and it is particularly important since there has been a tendency recently among physicians to advise the drinking of goat's milk for children and invalids.

Goverment Approves Tobacco Dip For Scabies in Cattle.

The Secretary of Agriculture at Washington, D. C., has amended Order 143, effective August 15, 1913, relating to dips for scabies in cattle by permitting the use of the tobacco dip prepared from tobacco and suitable tobacco products, provided it contains not less than seven hundredths of one per cent. of nicotine. Heretofore the requirements have been that the tobacco dip should contain not less than five hundredths of one per cent. of nicotine and two per cent. flowers of sulphur. The tobacco dip of the new strength need not contain the sulphur. The regulation remains unchanged regarding the lime-and-sulphur dip, which may be used as directed in the order.

Look Out for Hog Cholera!
Scourge Spreading Rapidly

Can Be Prevented—Can't Be Cured

Don't be the man who locks the stable door after the horse is stolen. Don't wait until cholera breaks out in your own neighborhood before you try to save your herd. "An ounce of prevention is worth a pound of cure"—and in this case a little prevention **without one penny of risk** may mean the saving of many hundreds of hardearned dollars. You can't afford to risk another day's delay—especially when I offer to do for you what I have done for thousands of farmers, and before you pay me a single penny. Read my offer below:

Act Quick—Don't Wait Until the Scourge Sweeps Off Your Hogs

Your only hope lies in **prevention**, and the time to **act is now.** The first step is to get rid of the disease-breeding, treacherous **stomach and intestinal worms**—the pests that not only rob your animals of their food but, what is still worse, sap their vitality and make them easy victims of cholera and other contagious diseases. **Worms** are often so deadly in their attacks that they are mistaken for the cholera scourge itself. Rid your hogs of these **disease-breeding** pests—do as thousands of other farmers are doing—feed Sal-Vet—**get rid of the WORMS**—and you will have less to fear from cholera and similar fatal diseases.

I'll rid your hogs of worms or no pay. I'll drive out the blood-sucking, life-sapping, disease-breeding parasites which are the cause of 90% of all live stock ailments. I'll do for you what I have done for thousands of farmers. **I'll prove it before you pay.** I'll do it with Sal-Vet—the greatest worm destroyer and live stock conditioner ever discovered—the most widely known and used live stock preparation on the market. You take no risk whatever. Sal-Vet has saved millions of dollars worth of hogs because it promptly gets rid of the destructive **WORMS** and puts all farm animals in a vigorous, healthy condition enabling them to better resist contagious diseases. Read the letters below.

The Great Worm Destroyer

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great Live Stock Conditioner

"Hogs all around my place had the cholera. I have been feeding Sal-Vet and not one of my hogs were taken sick. I cannot help believing that Sal-Vet prevented my hogs from contracting the disease." (Signed) L. O. Haworth, Cuba, Kansas.

"I cannot find words to express how much I think of 'Sal Vet.' Hogs all around my place had cholera, but I did not lose a single one of mine, and all winter they continued to look just fine. They had been on Sal-vet of course."—Wm. Campbell, Rt. No. 10, Decatur, Ind.

"I had cholera on my farm but *not* in the particular bunch to which I fed Sal-Vet. I consider it a good medicine to feed to hogs the Year 'round."—H. M. Schondelmaier, Houstonia, Mo.

"I have used Sal-Vet for two years, within which time I have not lost a single hog. I consider it a sure preventive for cholera. Have fattened 74 head of May pigs that we sold December 10th, and which averaged 207 pounds each. They took Sal-Vet every day, and never stopped growing. We cannot say enough for the merit of Sal-Vet."—F. R. Dalrymple, Carthage, Ind.

"My hogs were in bad shape when I received your Sal-Vet. Since feeding it they look fine and ARE fine. I have not lost a hog but those belonging to my neighbors on all sides have died."

—D. H. Manshop, Colo, Iowa.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding Sal-Vet."—Thomas Cannedy, Roodhouse, Ill.

I'll Feed Your Stock 60 Days Before You Pay

All I ask is the privilege of sending you as much Sal-Vet as you need to last all your stock 60 days. I don't ask you to send me a single penny in advance or to take any risk. Simply place Sal-Vet where your hogs, sheep, cattle and horses can run to it freely and **they will doctor themselves.** Sal-Vet is a medicated salt. It requires no mixing, no dosing, no drenching, no starving. No trouble at all.

Send No Money---Just the Coupon

Simply fill out the coupon, tell me how many head of stock you have, and I'll ship you enough Sal-Vet to last all of them 60 days. When it arrives pay the freight charges and at the end of 60 days report results. If Sal-Vet does not do what I claim, I'll cancel the charge—you won't owe me a penny. Send today. Address

SIDNEY R. FEIL, President

THE S. R. FEIL CO., Man'f'g Chemists

(My commission expires February 3d, 1914.)

Every possible interest of the American farmer has been deliberately sacrificed in the traiff bill which is about to receive the signature of the President of the United States. When it has been on the statute books long enough to show its effect it will be found to be worse than famine and pestilence combined.

Plant Food and Prosperity.

Possibly one of the most interesting and instructive addresses ever delivered before an assemblage of farmers is the one entitled "Plant Food and Prosperity" by Professor Henry G. Bell, of Chicago, who is Agronomist of the Middle West Soil Improvement Committee of the National Fertilizer Association. The address was delivered at Plano, Ill., in September, before the National Farmers' Congress.

Professor Bell began his address by a statement of the situation. In a race between population and population, population has production left behind. He shows by our decreased exports of wheat and flour we are approaching the limit of our home maintenance.

Professor Bell goes back into ancient history and reviews the methods of the Romans and how they had a working understanding of the rotation in crops.

He then step by step gets down to the present day and explaining the experiments that have shown the increasing harvests brought about by thorough tillage, seed selection, crop rotation and adding plant food to the soil in the shape of fertilizing materials.

Professor Bell entered into an examination of the elements that are under control of the farmer and those that are not. He places the farmer face to face with his own responsibility. Then comes the examination into results of farming methods in different countries, and he attributes the better German results to abundant use of plant food in the shape of commercial fertilizers.

Then comes the actual examination of American agriculture and the showing that is testified to by Commissioners of Agriculture and Directors of Agricultural Experiment Stations. It is one-sided testimony, because they, with one accord, eighteen of them, in states where large quantities of commercial fertilizer are used, say that the judicious use of fertilizer is a great factor in the prosperity of the country.

We have skimmed the pamphlet simply to draw attention of our readers to it, that they may address Professor Bell at Room 916, Postal Telegraph Building, Chicago, Ill., and ask him for a copy of "Plant Food and Prosperity" that he will be glad to send free of cost. Professor Bell is a scientific farmer, ripened by practical experience to be a safe counsellor of working farmers, and his statements are supported by abundant evidence to prove them.

Cattle on the hoof or meat on the block are arriving from Australia, Canada and from South America. There ought to be no meat famine under such circumstances.

The admission of foreign meats free of duty will not stimulate the production of cattle in the United States any more than the admission of foreign wools free of duty will encourage the wool grower to raise more sheep.

We are advertising some excellent ferns as subscription premiums. We have sent out a liberal number and we are assured that they grow finely and give full and complete satisfaction. See page 31.

St. Louis as a Fur Market.

The rise of St. Louis as a fur market is in recent years and due entirely to the activity of firms now in business and receiving furs on the market. The fur trade is somewhat peculiar, inasmuch as all houses deal directly as buyers with the shipper. They sell traps, baits and all the equipment to make a first-class hunter or trapper; they instruct them to catch, to cure and prepare furs and skins for market. Without the instruction sometimes a trapper prepares his skins in such a manner as to reduce the selling price. Our fur advertisements will be found on page 15. Last season, according to the Merchants' Exchange report, St. Louis handled 65 to 75 per cent. of all the furs trapped in North America and amounting to twelve millions of dollars. This year the United States government has changed the sale of all the government catch of seal skins, foxes and other Alaska furs from London, England, to St. Louis, Missouri.

The first big shipment of beef from Argentine was too previous. The United States government collected a small import duty upon it, and it did not sell any higher on that account.

We have no objection to Argentine meat coming into this country providing it is taxed for the support of the government, the same as we are taxed.

Common carriers in the United States are not allowed to give rebates to shippers, but Congress and the President are rebating duties to foreign shippers of grain, cattle and meats, for that is what it amounts to—taking money out of the pockets of our own people and giving it to foreign speculators.

On page 20 we are making an extraordinary subscription proposition by combining Collier's Weekly, one year, The National Farmer and Stock Grower, one year, and a copy of the magnificent Book of Live Stock Champions, all for $2.50, the price of Collier's alone. Collier's is about the most influential and attractive weekly publication in the United States.

The corn crop of the year 1913 is so small that the price of the corn crop of 1914 is assured. Corn is king once more and corn prices will not be reduced by any action of Congress. Corn and Hogs ought to be the battle cry of all American farmers.

The Northwestern Agriculturist, a slashing good farm paper, speaking of some Congressmen and Senators, said that they voted for protection for the millers and against protection for the farmers, and that is what they did.

St. Louis Cotton Market.

The St. Louis cotton market received the first considerable consignments of cotton for the season during the month of September, the total being 4,243 bales larger than were received last year. The total receipts at all ports this year in September were 1,358,486 bales, against 1,241,853 bales for the corresponding period last year. On October 1st, St. Louis quotations were as follows: Ordinary, 10⅞c.; good ordinary, 11⅞c.; low middling, 12⅞c.; middling, 13⅞c.; good middling, 14¼c.; middling fair, 14⅝c.

During the month of October, should any of our readers wish quick, up-to-the-minute quotations with a view of shipment to St. Louis, we advise communication with the Napoleon Hill Cotton Co., 116 South Main street, St. Louis, Mo., a first-class commission firm, standing high in the cotton trade. St. Louis is a superior cotton market and fully a third of the crop should be sold here in the interest of the growers and shippers.

Not a great many farm papers stood up for the rights in the interest of the farmers during the session of Congress that passes the tariff bill, and farmers should stand up for them.

EMINENT'S BESS, 209,719—THE WORLD'S CHAMPION JERSEY COW. Owned and exhibited by Walter S. Prickett, Roycroft Farm, Sidnaw, Michigan. Year's record—18,782 pounds, 15.6 ounces of milk, which contained 962 pounds, 13.6 ounces of fat, which is equivalent to 1,132 pounds, 12 ounces of salted commercial butter. This is the world's record for both the Jersey and Guernsey breeds of cattle. The total cost of the feed bill for the year was $116.54.

REPEATER, 7th—SENIOR YEARLING BULL AND VERY NEARLY PERFECTION ACCORDING TO HEREFORD CATTLE STANDARDS. REPEATER was junior champion and grand champion of the Hereford breed at the Iowa State Fair of 1913, and is progressing through the circuit with many prizes to his credit.

CLASSIFIED ADVERTISEMENTS.

AGENTS WANTED.

YOUNG MAN, would you accept and wear a fine tailor-made suit just for showing it to your friends? Or a Slip-on Raincoat free? Could you use $5 a day for a little spare time? Perhaps we can offer you a steady job? Write at once and get beautiful samples, styles and this wonderful offer. Banner Tailoring Co., Dept. 499, Chicago.

FARM AND RANCH LANDS.

ALABAMA.—Fertile prairie land near railroad town. Good for all kinds of farming and finest of stock countries. Buy from owner and save commission. State number acres wanted. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Look on page 18 for the advertisement of the lands on the Cotton Belt Route. The land of peanuts and pork. Simple agriculture that pays the way and earns the money with which to purchase and build comfortable homes. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for the Arkansas Booklet.

ARKANSAS LAND FREE.—500,000 acres government land now open to settlement. Guide Book with lists, laws, etc., 25c. Township map of state 25c. additional. **L. E. Moore,** Little Rock, Ark.

ARKANSAS.—For cheap lands in healthy, well-watered districts, no swamps or rocks, where we grow most everything. One eighty-acre farm, fifty acres in cultivation, four-room house, six-stall barn, 700 young bearing peach trees. Price, $1,200 cash for quick sale. Also 160 acres, unimproved, much small, good timber, only one mile from station; good investment; no trading; $8.00 per acre. **A. P. Dyke,** Hope, Ark. Note.—Hope is in Hempstead county, at the junction of four railroads.

CANADIAN FARMS.—Canada offers to working farmers great advantages for settlement. Get your Canadian Home from the Canadian Pacific. Long time loans are made to enable you to pay for land and improvements. Lands near the Canadian Pacific are unsurpassed in fertility. Write for illustrated booklets. Address, **C. M. Thornton,** Colonization Agent, 112 West Adams street, Chicago, Ill.

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

TEXAS.—Northwest Texas, the shallow-water country, that can easily be irrigated. See the story on page 5 and send to **C. L. Seagraves,** 2516 Railway Exchange, Chicago, Ill., and ask for the "Northwest Texas" Folder.

TEXAS.—Lands on the Cotton Belt Route in Texas are highly productive, in law-abiding communities, made rich by fruit and vegetable farming and stock raising. Good lands yet to be had cheap, but not for long, for prices are advancing. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for Texas Booklet of Low-rate Excursions.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Bldg., Chicago.**

WANTED to hear from owner who has good farm for sale. Send description and price. **NORTHWESTERN BUSINESS AGENCY, Minneapolis, Minn.**

FARM MACHINERY.

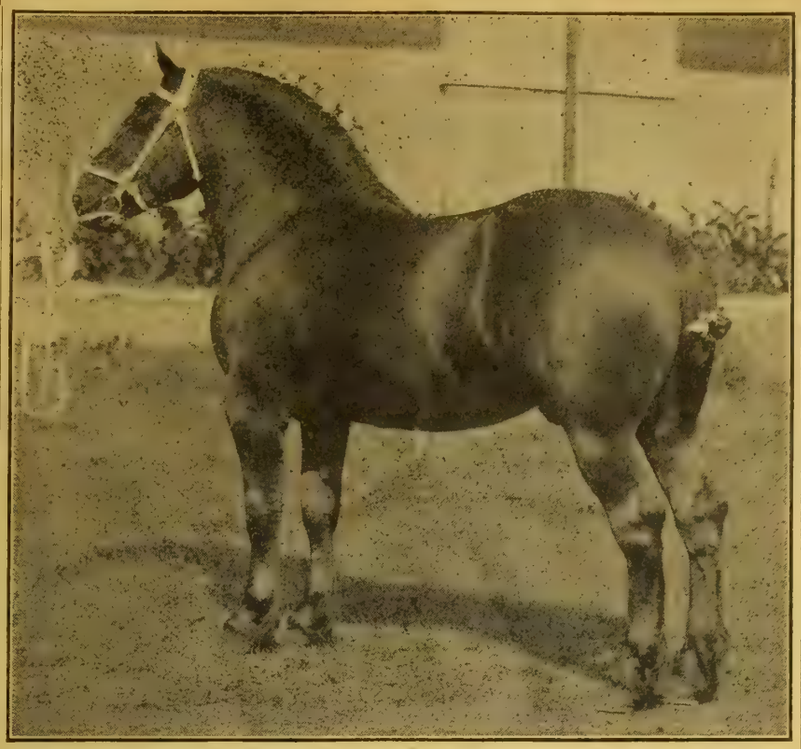
FERTILIZE INTELLIGENTLY. — Every seed in a packed seed bed; every ounce of fertilizer at the roots. The Peoria Union Combined Drill makes every seed count. Sows every seed at an exact, even depth, in a packed furrow. Write a postal card to get all the facts to Peoria Drill and Seeder Company, 2430 North Perry street, Peoria, Illinois.

VAN BRUNT SEED DRILLS.—Investigate thoroughly before buying any drill. Even seeding, correct planting, light draft, durable. Our Free Drill Book tells the story of the Van Brunt superiority. Write and ask for Book No. 7 VB and address John Deere Plow Company, Moline, Ill.

BUILDING MATERIALS.

BUILDING MATERIAL.—You can save 40 to 60 per cent. on your lumber bills. You can put up a barn or a silo good and cheap. Doors, windows, sash, all mill work of the finest kind. No matter which state you are in, this appeals to all who contemplate building or adding to buildings. Address, Hewitt-Lea-Funck Company, 488 Union avenue, Seattle, Washington.

ATLAS PORTLAND CEMENT.—Concrete is the remarkable development of the past few years. Once get in the concrete-mixing habit and your farm will receive continual lines of construction in everlasting form. We issue a book of 160 pages on concrete work. It is especially adapted to the farm. It will enlighten you. Address Atlas Portland Cement Company, Department 165, 30 Broad street, New York, N. Y., and ask for free farm book on concrete work.

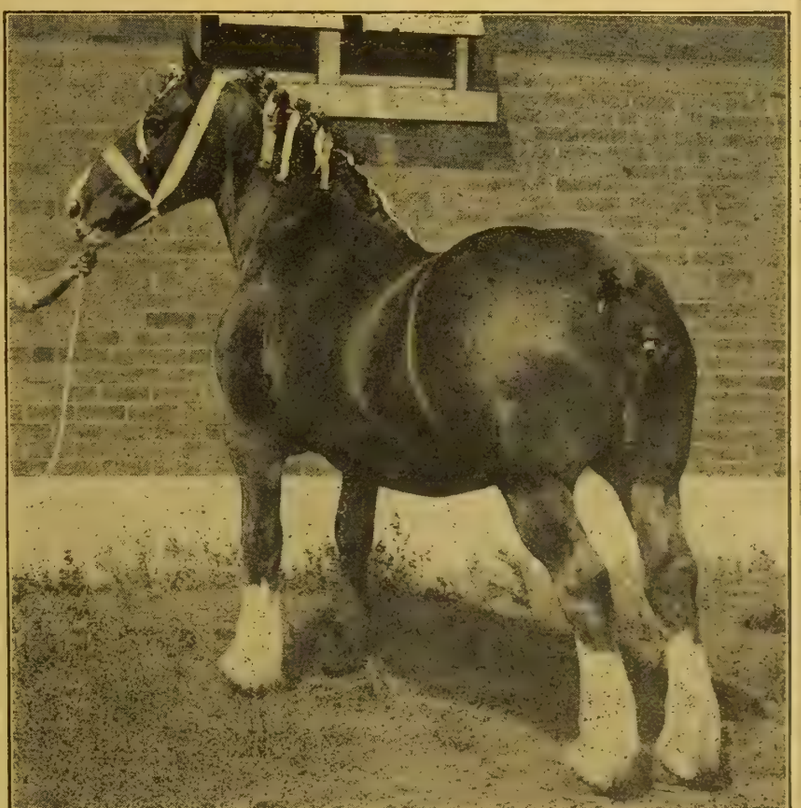


KOILACIA—PERCHERON STALLION. Champion at the Minnesota State Fair of 1913. A three-year-old that is probably one of the most perfect Percherons ever seen; noted for scale, substance, toppiness, combined with perfect feet, ankles and flat bone.

St. Louis Live Stock.

During th month of September the St. Louis National Stock Yards received 147,093 cattle, of which number 104,408 head were in the native division. It is the record month for St. Louis in native cattle.

At an English egg-laying contest, now nearing its close, a pen of White Wyandottes is first; a pen of Buff Plymouth Rocks is second; and another pen of White Wyandottes is third. There are 100 pens, six hens to the pen in the contest.



TATTON AURORA—SHIRE MARE. At twelve years of age and weighing 2,375 pounds, already a winner of many blue ribbons, she won the championship at the Iowa State Fair in a contest with the highest class of Shire mares. TATTON AURORA was exhibited by Trumans' Pioneer Stud Farm, Bushnell, Ill.

GOOD BOOKS AND PAPERS.

THE CORN CROPS.—A discussion of maize, Kaffirs and sorghums as grown in the United States and Canada. It is by Prof. E. G. Montgomery, of the New York State College of Agriculture. It is one of the books edited by Prof. L. H. Bailey, the highest authority on agriculture and horticulture. **THE CORN CROPS** is a book of 350 pages, illustrated, indexed, twenty-nine chapters, and it satisfies the reader and fills him with practical information. Published by the Macmillan Company, 66 Fifth avenue New York City, and the price is $1.60 per copy.

THE POTASH INDUSTRY.—Farmers who are interested in increasing their crops ought to obtain and read an elegant pamphlet issued for the purpose of showing the facts in regard to the potash industry. Potash is one of the three essential plant foods that have to be restored to worn-out soils and equally necessary to increase the fertility of good soils in order to grow maximum crops. The only commercial supply of potash comes from Germany. The pamphlet gives a full account of mining potash salts. The book shows that in Germany as much potash is used annually as there is used in all the balance of the world. The pamphlet also clearly defines the claims set forth and established for potash as a commercial fertilizer that pays the farmer. For a copy address German Kali Works, 1901 McCormick Building, Chicago, Ill.

SECRETS OF ALL CLEANING.—This is the story of the new Awco Washing Machine. It also is the instruction book in regard to the most improved methods in cleaning everything. Such books are priceless, yet they are a very long way from being worthless; in fact, many free books are the most valuable. Washing has been the drudgery of the farm. It is so no more. Washing machines run by light power will do the work. If you wish to know how it is, address American Washer Co., Dept. 3617-118 Sidney street, St. Louis, Mo.

SOUTHERN LANDS.

NATURE'S TREASURE GARDEN is calling You—Come South and grow with the country. Land $15 an acre up, cheapest in America, 2 and 3 crops grown yearly, ample markets, Living costs low. Climate very healthful and agreeable. Farm lists, "Southern Field" magazine and state booklets free.

M. V. RICHARDS, L. & I. Agt. Room 71, Washington, D. C.

Southern Ry. Mobile & Ohio, Ga. So. & Fla. Ry.

A POCKET CALCULATOR FREE.

Shows the Answer You Want as Quickly as a Watch Shows Time.

Almost every problem likely to come up in any line of business, office, store, farm or factory is quickly answered by Ropp's New Calculator, saving hours of work, money and wrangle. This book is a complete and accurate authority. Prevents your own mistakes or the mistakes of others. It will save you many dollars every year. If you want to know the interest on any sum for any time at 3, 3½, 4, 4½, 5, 5½, 6 or 7 per cent., you can have the answer at once. The net proceeds of any bill is instantly found.

If your hired man wants to know how much is due him, you can give him the figures by month, week or day. The book contains so much of value that it would be impossible to cover it in this space.

You can get a copy of this Calculator free, however, by writing to the Keystone Steel and Wire Co., 5526 Industrial street, Peoria, Ill. They are sending this fifty-cent book to all who are interested in better farm fencing and to help advertise their "Square Deal" Fence which is built different from all others. The "Square Deal" Fence Book and Ropp's Calculator are both sent free, postage paid.

NOBODY can sell you a better engine and nobody will quote you as low as my latest reduced Factory Prices Direct to Users.

I made the **WITTE**, the **leader** in usefulness 27 years ago, when the gas engine business was in its swaddling clothes. I have kept it ahead ever since, as the thousands of my customers testify.

WITTE Engines

Gasoline, Gas and Kerosene.

Sizes 1½ to 40 H-P. stationary and mounted, (skids and trucks) with detachable cylinders, vertical valves, and other features of merit without which no engine can be really high-grade. Start easily; no cranking; run without watching, 24 hours a day. Cheaper power, per horse, than others give.

Buy Direct From Factory

60 Days' Free Trial. 5-Year Guaranty.

I give you lowest factory prices ever known for strictly high standard engines of proven worth. No reasonable terms refused if you don't wish to pay all cash. Get my new book, FREE, with latest prices.

ED. H. WITTE, WITTE IRON WORKS CO. 1721 OAKLAND, AVE., KANSAS CITY, MISSOURI.

THE AIR IN THE SOIL.

Free Passage of Air Necessary to the Development of Nitrogen-collecting Bacteria—Roots Require Air as Well as Plant Food or Water.

An experimenter with soils makes the statement that a sandy soil seems to favor a high protein content in soy beans. A sermon might be preached on that text. The reason for the higher protein content of any beans on such a soil is apparent. Sandy soil permits the ingress of a larger amount of air than does clay soil. The roots of the soy bean are covered with little tubercles in which dwell the minute organisms that take the free nitrogen in the air and fix it in a form that can be used by the plant. This nitrogen in turn combines with several times its bulk of carbon and forms protein, with the assistance of hydrogen.

It is evident that the amount of nitrogen that is taken out of the air in the soil must be limited by the amount of air that can get into the soil. Therefore it is necessary to make provisions for the free passage of air into the soil.

But what is true of the soy bean is equally true of all the leguminous plants, such as peas, all kinds of beans, the clovers, alfalfa and of all kinds of plants that bear pods. For on the roots of all such plants tubercles form, provided the germs that form the tubercles are in the soil.

Unless air can come into the soil in considerable quantities, all of the so-called nitrogen-gathering plants will be able to develop but weakly. The condition of the soil is therefore sometimes directly responsible for the failure of some of these nitrogenous crops.

But there is another factor entering into the case, and that is the oxygen consumed by the roots of plants. That, too, comes from the air in the soil, and unless that air supply is considerable, the plants cannot thrive.

There are several factors entering into the case of a deficient air supply. One of the most common means of shutting off the air is to pack the soil so hard at the surface that it is glazed over at the top till it is air-tight. This happens in the footpath. It is the compacting of the soil that makes it impossible for plants to grow in such a soil, not because the roots cannot force their way through the compacted soil, but because the air cannot permeate it, and the roots will not go where there is no air.

Often a heavy rain falling on a clay soil will compact the surface so the air cannot get through, and so it is noticed on such a field that all the plants are stunted and have ceased to grow. The remedy is to break up the crust after each rain so that the air can get in. It is this letting in of a fresh supply of air that causes the remarkable growth in a field of potatoes or other plants after a cultition or a hoeing.

Swine have been known to pack the ground around a fruit tree so hard that the tree died because the air could not get into the soil.

Too much water in the soil has the same effect of keeping out the air. Drainage of wet lands therefore is necessary for the growing of any but aquatic and semi-aquatic plants. These latter plants are able to get their nitrogen and their oxygen from the air that is diffused through the water. Dry-land plants have not that power in sufficient degree to allow them to thrive under wet conditions.

FILLING THE SILO.

Corn the Great Stand-by—Exclusion of Air Necessary to Proper Silage Making—A Few Observations on the Subject.

Corn is the best material with which to fill the silo, though a good many other things have been tried and are being tried. Peas and oats mixed are still used in some localities, but, in the main, these make better hay than silage. Where beet pulp can be obtained, this is also proving quite popular, but beet-sugar factories are not numerous, and dried beet pulp is more easily handled than the beet-pulp silage. But in the great area in which corn can be grown that plant will always remain the great stand-by in the making of silage.

Putting in too immature corn has not been found to be advisable, as the resultant silage has in it too much acid. For this reason, in the North the Southern silage corn has been supplanted by the dent varieties in the filling of the silo, for the dent varieties reach the glazing stage before the Southern varieties of corn do.

The corn should be put in the cutter with the ears on and the ears should be distributed as evenly as possible, so that the leaves will press against them and keep out the air. Air spoils silage, and its exclusion is the great secret of proper silage making.

To keep out air, empty spaces are to be avoided and settling becomes a part of the process. Therefore it is better not to fill the silo too rapidly. The filling can be spread over enough days to permit of settling between the different periods of filling.

Tramping the silage is a feature that must be looked after carefully. The sides must be tramped, as the center tends to look after itself. However, the way the cut corn drops into the silo will hinder or help this work.

It is a mistake to cut down a great amount of corn before cutting into silage length begins, for wilting is likely to injure the product. Moisture is a considerable factor, and in dry times the best silage makers use the hose freely in wetting the mass of silage. Some fix the hose nozzle onto the cutting machine and sprinkle the silage as it is cut.

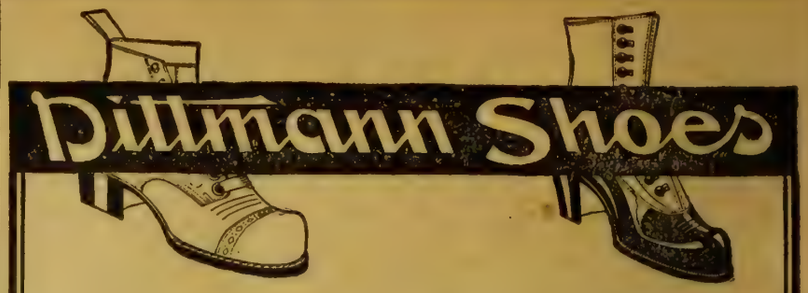
Therefore the work of filling the silo can go on in rainy weather as well as in good weather, if the rain is not heavy enough to keep the men from working. Of course, in wet weather there is no danger of the corn wilting, which is an item in favor of wet weather.

Many different methods have been tried in putting corn into the silo. Different farmers have put in whole stalks and claimed fairly good results; but, taking the experiments as a whole, uncut corn stalks have not proved a safe kind of silage, as it is very difficult to pack them close enough to exclude all air. Where whole stalks are used, however, cutting into short pieces is avoided, and that amount of labor saved. But cutting short is to be advised, and three-fourths of an inch is about the right length to pack well.

Covering the top with marsh grass or straw helps to keep the air from the top of the silage and preserves more than when no such covering is used. The grass rots down and forms a compact air-tight surface.

Too dry corn stalks do not give a silage that packs well. The air gets in and dry mold reduces the value of the silage for feeding.

It is reported from Texas that the matter of maturing all heifer calves is becoming the practice, and only very poor specimens, not worth raising, are being sent to market.



It's a *Good* Old Habit to Wear Dittmann Shoes—Known for 69 Years as Leaders in Quality

Four Pointers

Quality—Good materials carefully selected and put together by careful, experienced workers.

Style—Designs that are modish and in the lead, giving trimness to the foot.

Comfort—Shapes that are right for the foot and proportioned to give ease.

Durability—The result of both quality and right shape, thus giving best possible wear at the price which is true economy.

These are but a few of the many reasons why there is satisfaction in wearing Dittmann Shoes.

Smart Shoes for Women

In the house, on the street, everywhere, a woman needs shoes that are neat and stylish, yet comfortable. All these and durability as well are found in the many snappy models of Dittmann Shoes.

Ladies who wear Dittmann Shoes are certain of neat looking footwear, right for all occasions, at the least possible expense, the year through.

For Health

Let the children wear our durable, hygienic, neat looking

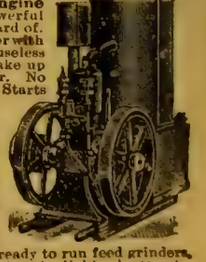
Detroit Kerosene Engine

Saves Time, Trouble, Expense



The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

Runs on Cheap Kerosene

Will run on distillate and gasoline, but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants etc. All sizes in stock ready to ship.

GUARANTEED 6 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (188)

CERTIFIED MILK.

Methods and Standards Adopted by the American Association of Milk Commissions—How to Get Them.

The first bulletin in the new department series of the United States Department of Agriculture is a contribution from the Bureau of Animal Industry, entitled "Medical Milk Commissions and Certified Milk." This is a revision of a previous bulletin on the same subject.

The organization and objects of the first Milk Commission are described and the origin and meaning of "certified milk" are set forth. The word "certified" has been registered in the United States Patent Office and may only be used by a duly organized medical milk commission.

The first Milk Commission was organized in 1893. Since that time over sixty commissions have been established, but nearly one-third of that number are inactive at present.

About 125 dairies are engaged in producing certified milk, and the daily production is nearly 25,000 gallons, an increase of 300 per cent. in five years. While this seems a remarkable increase, it should be remembered that only about one-half of one per cent. of the total milk supply of the country is certified.

While the chief demand for certified milk is for infants and sick people, it further serves to teach the public the value of careful methods in milk production and the extra cost of absolutely clean milk.

The bulletin describes the equipment and methods necessary for the production of certified milk. It is pointed out that expensive equipment is not a necessity so much as a careful and unremitting attention to details.

The American Association of American Milk Commissions was organized in the year 1907. The methods and standards for the production and distribution of certified milk adopted by this association at its 1912 meeting are given in the appendix to the bulletin. Write for it to the Department of Agriculture, Washington, D. C.

Holstein-Friesian Records.

During the period from June 13th to 30th, 1913, records for 260 cows were accepted to entry in the Holstein-Friesian Advanced Register. This herd of 260 animals, of which over one-half were heifers with first or second calves, produced in seven consecutive days **105,768.3** pounds milk, containing **3,715.899** pounds butter-fat, thus showing an average of **3.51** per cent. fat. The average production for each animal was **406.8** pounds milk, containing **14.292** pounds butter-fat, equivalent to **58.1** pounds or **27.6** quarts of milk per day, and **16.67** pounds of commercial butter per week. These figures are furnished by Mr. Malcolm Gardner, Superintendent of Advanced Registry.

NATIONAL DAIRY SHOW.

Programme For Each Day From the Opening to the Close.

We are receiving inquiries concerning the different events that are coming off at this year's Dairy Show. In order to meet this demand for information, we have drawn up what will act as a guide for prospective visitors in selecting their dates for visiting the National Dairy Show between October 23d and November 1st, at Chicago.

Friday, October 24th—Grange Day.—10:00 A.M.—International Association of Dairy and Milk Inspectors; judging dairy products; students' judging contests.

Saturday, October 25th.—10:00 A. M.—International Association of Dairy and Milk Inspectors; judging dairy products.

Monday, October 27th—Ayrshire Cattle Club Day.—9:30 A. M.—Judging Ayrshires. 12:00 noon—Saddle and Sirloin Club, Round Table conference. 2:00 P.M.—Show Building, International Milk Dealers. 8:00 P. M.—LaSalle Hotel, International Milk Dealers. 8:00 P. M.—Congress Hotel, National Creamery Butter Manufacturers.

Tuesday, October 28th — Jersey Cattle Club Day.—9:30 A. M.—Judging Jersey cattle. 12:30 noon—Record Building, Saddle and Sirloin Club; Railroad Dairy Department Men's lunch. 1:00 P. M.—Record Building, American Dairy Farmers' Association; Record Building, Dutch Belted Cattle Association meeting. 2:00 P. M.—Show Building, International Milk Dealers' Association. 8:00 P. M.—International Milk Dealers' contests in arena.

Wednesday, October 29th—Guernsey Cattle Club Day.—9:30 A. M.—Judging Guernsey cattle. 10:00 A. M.—Auditorium, Show Building, National Creamery Butter Makers' Association. 10:30 A. M.—Saddle and Sirloin Club; Dairy Department Men of Agricultural Colleges. 12:15 noon—Saddle and Sirloin Club; Dairy and Farm Paper Editors' lunch. 1:00 P. M.—Record Building, American Dairy Farmers' Association; Banquet Hall, Stock Yards Inn, National Association of Ice Cream Manufacturers.

Thursday, October 30th—Holstein-Friesian Cattle Association Day.—9:30 A. M.—Judging Holstein cattle. 10:00 A. M.—Auditorium, Show Building, conference for organizing National Association of Creamery Managers. 1:00 P. M.—Record Building, American Dairy Farmers' Association. 1:30 P. M.—Arena, Milk Producers' Association contests; Auditorium, Show Building, National Creamery Butter Makers' Association; Room 5, Record Building, Illinois Butter Manufacturers' Improvement Association; Banquet Hall, Stock Yards Inn, National Association of Ice Cream Manufacturers.

Friday, October 31st—Ice Cream Manufacturers' Day.—10:00 A. M.—Auditorium, Show Building, National Creamery Butter Makers' Association; Banquet Hall, Stock Yards Inn, National Ice Cream Manufacturers. 8:30 P. M.—Arena, contests by members of Ice Cream Manufacturers' Association.

Saturday, November 1st.—12:15 noon—Saddle and Sirloin Club; National Association of Dairy Herdsmen; meeting and lunch.

With butter at the present high price every ounce of cream counts

Cream is more than ever a very valuable commodity these days, and it is doubly important that not a drop be wasted or lost.

If you are still using the "gravity" setting method you are losing a pound of butter-fat in the skim-milk for every four or five pounds you get.

The advantages of the DE LAVAL over inferior cream separators at all times are greatest at the season when milk is often cool and cows are old in lactation.

A DE LAVAL

Will Save Its Cost by Spring

Then why put off any longer the purchase of this great money saving machine. Put it in now and let it save its own cost during the Fall and Winter and by next Spring you will be just so much ahead.

Even if you have only a few cows in milk you can buy a DE LAVAL now and save its cost by Spring, and you can buy a DE LAVAL machine for cash or on such liberal terms that it will actually pay for itself.

THE DE LAVAL SEPARATOR CO.

NEW YORK CHICAGO SAN FRANCISCO SEATTLE

Each cattle club on their respective day, or the day following, will have interesting meetings and club dinners in the evening.

Interstate Butter Contest.

"One of the most interesting butter contests was held in connection with the North Iowa Fair at Mason City, Iowa, September 8th to 12th. Superintendent Howard D. Reynolds, of the Central States Butter Contest Association, was in charge. One hundred and seventy-three tubs were entered. The entry from states is as follows: Iowa, 71 tubs; Minnesota, 74 tubs; Wisconsin, 18 tubs; South Dakota, 5 tubs; Michigan, 3 tubs; Nebraska, 1 tub; and Illinois, 1 tub.

"The average score of the 173 tubs was 93.14.

"In the Whole-milk Class there were 87 entries. Alfred Camp, of Owatonna, Minn., won first with a score of 97¾. F. W. Bremer, Sumner, Iowa, won second; score, 97½. F. W. Hedtke, Norwood, Minn., won third; score, 97¼.

"In the Gathered-cream Class there were 86 entries. Henry Hanson, Cylinder, Iowa, won first with a score of 95½. Mrs. A. B. McLaughlin, Elgin, Minn., won second; score, 95. Watson Shick, Monona, Iowa, won third; score, 94¾.

"The butter was sold to Gude Bros., Kieffe Company, New York, at 31 cents per pound on track at Mason City.

"The judges were F. L. Odell, of the Dairy Division, Department of Agriculture, Washington, D. C.; Jas. Sorenson, Manager of the Minnesota State Creamery, Albert Lea, Minn.; and J. J. Ross, Assistant Dairy Commissioner, Iowa Falls, Iowa."

At the Missouri State Fair this year the poultry entries increased over a thousand in excess of last year.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Dept. G, Nursery, Mo.

Cowpea Good as Egg Food.

"Cowpeas are not only relished by hens, but are excellent egg food for them. One successful poultryman gives this experience: The peas, after maturing, were harvested and stored in dry lofts, and thrown to the fowls in scratching pens, where they were scratched over and searched for during the day.

"After a few days the egg supply was visibly increased, and within a few weeks almost doubled that from an equal number of hens kept in separate quarters and fed on other grains. The hens seemed to like the small branches anl leaves, and would eat every particle except the hard, stiff stems.

"The general health of the flock was excellent, and not a single hen showed the least symptom of ailment during the winter season. Considering the ease with which cowpeas may be raised, it seems that everyone should give them a test as food for the poultry."—Tennessee Agriculture.

DO YOUR OWN THRESHING

of beans and peas with a guaranteed Owens Thresher. All your seed separated and cleaned from the vines and pods without splitting. Pea and bean growing is the most profitable farming if handled right.

OWENS DOUBLE CYLINDER
Bean and Pea Thresher
—Made in 4 sizes—

Will pay for itself many times over in one season. Guaranteed not to split the seed and take all from the vines.

FREE BOOK

Send for our free book of valuable information about bean and pea culture. Illustrations and description of our machines. Facts and figures showing results obtained by users of our Hullers—write today.

GROWING ALFALFA.

It Will Satisfy More Needs Than Any Other Plant—Old as Egypt and Will Grow in Any Climate.

We find in the Farmers' Digest an article on alfalfa, as follows:

"A careful analysis of American agricultural conditions shows that we need more fertile fields, or rather fields with greater fertility. We ned larger and better herds. We need better roads. We need larger bank accounts. We need better homes. We need better citizenship. How can all this be done? Perhaps no one thing will do more to secure these things than growing alfalfa.

"Many farmers in the Corn Belt do not believe that they can grow alfalfa. They are under the impression that it requires peculiar climatic conditions, and a peculiar type of soil, such as is found in the Western States, particularly Kansas, Nebraska, Colorado, California and Utah—the great alfalfa states. We have reached the point where we know we can grow alfalfa in the Corn Belt, and it is now up to us to grow it.

"There is nothing new about alfalfa. Alfalfa is as old as the pyramids. It was grown in the time of Rameses, the first Egyptian ruler that history tells us very much about—and this is as far back as we need to go for all practical purposes. Caesar and his predecessors were strong believers in alfalfa, and their cavalry horses were fed upon it. Books on agriculture, written in the early days of the Roman Empire, tell how to grow alfalfa. Doubtless the world-wide supremacy of Caesar's armies and the Roman Empire was due in no small way to the abundant yields of alfalfa grown by the Roman farmers.

"The early colonial settlers brought alfalfa seed with them, and many years ago alfalfa was in high repute under the name of lucerne in the Atlantic Coast States. Even in that remote time, alfalfa was recognized as having remarkable attributes, although it acted strangely under cultivation, because its habits were not well understood. One man would succeed in securing a fine stand, while another would fail almost completely.

"One hundred years ago the Spaniards brought alfalfa to Chili, Peru and into Mexico, and later introduced the plant in Southern California. From there it spread eastward to Utah, Idaho, Colorado, Montana, Kansas and Nebraska.

"At the present time all of the alfalfa grown east of the Mississippi river is less than the area of the little state of New Jersey. The total area under alfalfa in this country is 4,707,136 acres. Of this area Kansas alone has 956,962 acres of alfalfa, or about one-fifth of our entire alfalfa crop. Nebraska comes second with 685,282 acres; Colorado third with 508,892 acres; California fourth with 484,134 acres; and Idaho fifth with 308,892 acres.

"The Corn Belt States are lamentably shy in the growing of alfalfa, as is shown by the following rank in which they come as producers of the crop: Missouri, 17; Ohio, 19; Iowa, 20; Illinois, 23; Wisconsin, 23; Indiana, 24; Michigan, 29; and Minnesota, 35.

"With the unquestioned advantages of alfalfa, we should be growing more of this great legume crop."

Seventy millions of dollars' worth of foreign goods are in bonded warehouses awaiting the passage of the bill that relieves the owners thereof from paying duties amounting to fifteen million dollars at least. In the meantime there are American citizens returning from abroad who are harassed and humiliated because they object to being forced to pay duties on personal effects.

The Book of LIVE STOCK CHAMPIONS.

EDITION OF 1912.

NOW READY FOR DELIVERY.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

One Thousand Champions,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in THE BOOK OF LIVE STOCK CHAMPIONS are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

THE BOOK OF LIVE STOCK CHAMPIONS is published as a Souvenir Supplement to THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements.

AN EXTRAORDINARY OFFER.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to THE NATIONAL FARMER AND STOCK GROWER. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. No finer volume was ever offered. Send One Dollar with your order to

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE CORN GRADES.

Interested Parties Are Given an Opportunity to be Heard on the Subject Before the Grades Are Finally Fixed.

In the September number of The National Farmer and Stock Grower we mentioned at some length the specifications for the new commercial grades of corn as proposed by the United States Department of Agriculture. We have since been informed that a public hearing will be held at the Department of Agriculture, Washington, D. C., on Tuesday, October 29th, 1913, at 10:00 A. M., in order that all persons interested in the commercial grading of American corn may have an opportunity to be heard on the tentative grades for corn, as announced on August 22d, 1913, before federal grades for commercial corn are definitely fixed by the Department of Agriculture.

For the purpose of giving those interested an opportunity to become familiar with the data on which the tentative grades are based, prior to the hearing, representatives of the Office of Grain Standardization will present the more important results of the investigations at New Orleans, La., on October 15th, in connection with the annual meeting of the Grain Dealers' National Assoication; and at Des Moines, Iowa, on October 21st, at a special meeting under call of the President of the National Council of Farmers' Co-operative Associations. The Department has also expressed a willingness to give additional opportunity for a further consideration of these data at a general meeting in Washington the day immediately preceding the date of the formal hearing, in case anyone interested should care to call such a meeting.

WHEAT MARKET SITUATION.

Bountiful Home Harvest—World's Crop Largest—Our Seaports to be Opened to Foreign Wheat Free of Duty—Prices Unsatisfactory.

We estimate that the tariff agitation and the certainty of foreign wheats being admitted free of duty have already cost the wheat growers an average of five cents a bushel during the past six months. How more it will cost when the foreign wheats are actually arriving and admitted free of duty we are not prepared to say.

The wheat that best stands competition is the soft wheat that is marketed so largely at St. Louis, which is considered worth three cents a bushel more than the hard wheats. Even as we write, on September 30th, No. 2 red is selling at St. Louis at 92½ to 95½ cents a bushel, while No. 2 hard wheat is selling at 87½ to 93 cents a bushel, having advanced a cent or two during the month, although the general market at Chicago, on contract grades, has declined or remained stationary.

When the September wheat option first began to be traded in, some time in June last year, the first figure we noticed was 90 cents a bushel. When we quoted it on August 30th the price was 85⅞ cents, and on September 30th, when the goods were delivered and the curtain was rung down, the price was 85⅛ cents a bushel, and the loss difference in our opinion was due to the men who draw $7,500 a year in Washington to legislate against the American farmer.

During the month of September the December wheat option declined about two cents a bushel. On August 30th the Chicago quotation was 89⅝ cents a bushel, and thirty days later, on September 30th, the price had declined to 87⅝ cents a bushel.

Now comes the indicator, the significant figure that foretells the future. We hear of people consulting the clairvoyant to find lost articles and to tell the future. There is no clairvoyant equal to the Board of Trade quotation, which is the consensus of opinion of all the traders at the time it is quoted. They may be mistaken, because half of them expect the market to go higher and the other half expect it to go lower; but money is required to buy or sell, and conversation alone will not change a quotation.

As we write this it is eight full months to the last day of May, and yet the May quotation is in the minds of every grain trader. The May quotation on August 30th was 94½ cents, and on September 30th, thirty days later, the quotation had declined to 92⅝ cents.

We believe that wheat is the harvest crop of the greatest importance; that farmers have loved to grow wheat; even when prices have been extremely low, and it is scant encouragement after the largest crop ever raised was in the year 1913 that Australia, Argentine, Russia, Canada and all wheat-growing nations are invited to come in with their wheat absolutely free of duty, and in order to make up the deficiency in revenues, additional, unnecessary war taxes are imposed directly on our own people.

Endorses Santa Fe Methods.

Earl Raynor, of Floydada, testifies to the usefulness of the Santa Fe Farm Demonstration Department in its assistance to the settlers in Northwest Texas, saying: "Even though there was but little rain, and the ordinary crops—those planted in the usual way— did not show much yield in 1912, my demonstration milo and Kaffir produced under your direction thirty bushels per acre. I am proud I took the work with the Santa Fe Demonstration Department, and would be glad to plant my entire 1913 crop under that supervision. I know of no surer or quicker way to get a knowledge of scientific and dependable methods for satisfactory crop production."

This refers to the article entitled "Enrich Yourself" on page 6.

FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS.

October Edition, 1913.

This is not a directory of farmers and shippers, but it is a directory for the use of farmers and all shippers and handlers of farm products.

The Directory contains an alphabetical arrangement by states in which there are about five thousand (5,000) names and addresses, also stating whatever the occupation may be. Industries represented are as follows:

Agricultural Books and Charts—Agricultural Implements—Arms and Ammunition — Auctioneers, Live Stock—Beekeepers' Supplies—Building and Construction — Cattle Troughs, Self-feeders—Cisterns and Tanks — Colonization Companies—Commission Agents, Cotton and Wool—Commission Agents, Dressed Meats—Commission Agents, Cattle, Hog and Sheep—Commission Agents, Hay, Grain and Seed—Commission Salesmen, Butter, Cheese, Eggs, Poultry and Produce—Commission Agents, Horse and Mule—Co-operative Associations—Cotton-ginning Machinery—Creameries and Dairy Distributers—Dairy Apparatus—Dynamite and Blasting Powders—Electric Farm Appliances—Engines For Farms—Experts, Farm Specialties—Farm Chemicals and Sprays—Farm Books and Papers—Farm Tools and Hardware—Fencing, Farm and Ranch—Fertilizer Manufacturers—Fruit Specialists—Grain Elevators and Graders—Harness and Saddles—Horse Goods—Horse and Mule Dealers—Incubators and Brooders—Irrigation plants and Machinery—Live Stock Dealers—Merchants, Farm Goods—Motor Cars and Trucks—Nurserymen and Florists—Packers, Abattoirs and Wholesale Butchers—Paints and Varnish—Poultry Supplies—Printers, Fruit and Package Labels—Purchasing Agents, Cattle, Hogs and Sheep—Road Machines — Roofing — Sale Stables—Seed Growers and Dealers—Sheep Dips and Specialties—Stock Foods and Tonics—Stock Yards and Markets — Stump Pullers — Swine Breeders' Goods—Tractors, Farm—Trade Publications—Vegetable and Fruit Packages—Vehicles and Harness—Veterinary Appliances—Water Engines and Powers—Water Systems — Well-drilling Tools — Windmills and Engines—and all others having business connections with the farm interests of the country.

The subscription price of one copy of the FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS is fifty (50) cents, and we will be glad to send a copy to anyone on receipt of price. As a special proposition we desire to say that we will furnish our monthly NATIONAL FARMER AND STOCK GROWER for two years and one copy of the FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS for one dollar.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd,** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ABSORBING CANADIAN CATTLE.

Since July, 16,000 Head Have Crossed the Line, Paying Duty at the Front Door.

The Canadian Weekly Sun of September 24th states as follows:

"Since the 1st of August, 16,000 head of cattle have been shipped to Buffalo from the Toronto market. Last Friday alone forty-eight cars were sent across the line. Practically all of these shipments consisted of stockers. In spite of a duty of 27½ per cent. and after paying freight and yard fees, the Toronto commission men who have undertaken this venture are able to reap a profit of $5.00 per head (as speculators). Light stockers weighing 300 to 500 pounds, which are selling in Toronto at from $3.00 to $4.25, bring $5.80 to $6.25 on the Buffalo market. Stockers weighing 500 to 700 pounds can be bought in Toronto for $4.25 to $5.00. This is a difference of from $4.00 to $15 per head.

Why the Movement Occurred.

"In Quebec and in the eastern counties of Ontario a very serious feed condition exists. Hay was practically a failure and severe drouth has burned up pastures and considerably reduced other crops. As a result, farmers are forced to sell off their young cattle. These cattle were shipped into Toronto, and for a while the market held firm. When shipments became so heavy that a congestion was feared, some enterprising Toronto commission men made an experimental shipment to Buffalo. The result was the American market has absorbed all our surplus without demoralizing the home trade. The strong demand for stockers and feeders on the Buffalo market comes principally from Pennsylvania, where there is an abundance of feed and a shortage of cattle.

The Future Situation.

"While it is a good thing this avenue of trade has opened up just at a time when Canadian farmers had to sacrifice their stock, yet it means a future shortage of cattle. Also, if farmers had been able to hold these cattle for a month or so it is highly probable much higher prices would have been realized, due to the abolishing of the United States tariff. It is the opinion of American cattle dealers that despite the fact that their market is being thrown open to the world, that high prices will prevail for many years to come. It is also said that American breeders will scour this country for good female stock with which to recuperate their herds. A bright future awaits those farmers who are in a position to take advantage of this almost unlimited market."

Standing a Bull With Stallions.

The following very sensible article is from the American Breeder, published semi-monthly at Kansas City:

"The average stallion owner does not think of the possibility of standing a good bull for public service. A good registered bull can be purchased cheaply enough so that it should pay for itself easily in two or three years. An animal of this kind is not very difficult to handle and should not interfere with the other work.

"Cattle prices are higher and the demand for improving blood greater than the average breeder thinks for. A two-year-old heifer of good size and fairly well bred, safe with calf, will sell on the market for from $50 to $80 without any 'papers.' In many localities good milch cows have sold as high as $150. Why is it not profitable to look after this part of the breeding industry? Breeders who have studied only the horse end of it may lose a good opportunity by not thinking about the cattle market.

A good bull should stand for around $5.00 in most localities. In some localities, where there are many pure-bred cows, the service fee might be advanced. A lot of breeders have an extra mongrel stallion that they could dispose of and place in its stead a good bull very profitably. The mares coming to this mongrel stallion could be transferred to better sires, or at least a part of them. The bull would open a new field. An enclosure separate from the bull's habitation would serve as the breeding paddock. A bull, properly handled, can be brought in with a lead strap (in case of some dairy bulls a 'jockey stick' is considered necessary), released to make the service and caught without trouble for returning to its paddock.

Some cow owners will need a little education and enlightenment as to the value of better progeny. A calf sired by a good, pure-bred bull is worth at weaning time from $5.00 to $10 more than one sired by a scrub. Those who expect to raise cattle and increase the quality of their herds cannot measure the value of a good sire in dollars and cents. A further advantage in using a good bull is, that one owning a calf sired by a good animal will not be forced to hunt for buyers. Nearly all live stock buyers are now hunting for the best, and a few dollars in the price does not usually interfere with the transfer.

In some localities, a breeder, thinking of standing a good bull, will find several owners of good cows ready to co-operate with him. It is often the case that men owning a limited amount of land and desiring to keep a small herd of choice pure-bred cows are held back because of the cost of a bull suited to their needs. If a breeder can find two or more farmers so situated, and keeping the same breed of cows, he very likely can get them to join him in selecting a bull, which all will be glad to patronize. The same problem has given rise, in some sections, to co-operative breeding clubs, and doubtless there are many places where progressive, capable breeders can work out a better solution of standing the right kind of a bull. This plan, properly followed, with either beef-bred or dairy cattle, could soon give any favorable locality a reputation for a superior class of young stock.

Don't Wait Until Hogs Are Sick
Feed Merry War Powdered Lye NOW

E. Myers, President, E. Myers Lye Company

Epidemics of hog sickness nearly always come without warning. And when an epidemic breaks out—it's all over but burning a lot of worthless carcasses! Your pork profits, Mr. Farmer, are too big a part of your income for you to take chances with. You can **insure** your pork profits by beginning right now to **feed your hogs regularly twice each day** a small quantity of MERRY WAR POWDERED LYE mixed with their rations or drinking water. Full directions on every can.

Has Saved The Lives of Thousands of Hogs

It is the **safe** preventive of hog cholera, it quickly destroys hog worms, makes hogs fat, sleek, healthy—puts them in prime condition and enormously increases pork profits. So **don't wait** until your hogs begin to cough, snoop around and get off their feed. Begin feeding them MERRY WAR POWDERED LYE **now—and be on the safe side.**

Don't Experiment—There Are No Substitutes

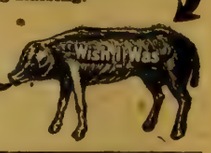
Don't be persuaded to try an ordinary, old-fashioned lye as a possible preventive of hog cholera. At best, it would be a doubtful, **perhaps a dangerous experiment.** MERRY WAR POWDERED LYE will **not** hurt your hogs. It is the specially prepared lye that is **safe** to feed to hogs as directed on every can, **and there are no substitutes.** MERRY WAR POWDERED LYE is not only a **safe** preventive of cholera, but it is also the best hog fattener, and all 'round conditioner the world has ever known.

10c A Can At All Dealers

MERRY WAR POWDERED LYE is for sale at most dealers, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans $4.80. Costs only **5c per hog, per month,** to feed regularly—by far the best and much the cheapest hog insurance you can buy. If your grocers, druggists or feed dealers can't supply you, write us stating their names. We will see that you are supplied, also send you FREE a valuable booklet, "How To Get The Biggest Profits From Hog Raising."

Order direct from us in case lots—4 dozen cans $4.80—if dealers won't supply you.

"There Are No Substitutes"



E. MYERS LYE COMPANY,
Dept. 22 St. Louis, Mo.

Hog Grades and Prices.

Many farmers who do not ship hogs to market have little idea of the many different grades and classes that are recognized by the trade, and they do not understand why the best hogs do not sell at the highest price.

All hogs are sold at a price per 100 pounds, and sometimes light hogs top the market, sometimes medium-weight hogs sell the highest, and sometimes the heavy hogs sell at the highest price per pound.

Just now hogs are selling irregularly. The heavy hogs are at a discount. The people who purchase light hogs are paying the most money per pound, because they are obliged to. Bacon is selling at extravagant prices to consumers, and it is natural that bacon hogs should outsell the heavier hogs used in the packing trade.

One day during the last week in September we noticed that at Chicago light shipping hogs were selling at $8.90 to $9.10 per 100 pounds and topped the market, and heavy shippers were selling at $8.15 to $8.40 per 100 pounds, which is a tremendous difference. The light butcher hogs were selling at $8.55 to $8.90, and heavy butcher hogs at $8.20 to $8.40; medium weights were selling at $8.10 to $8.50 per 100 pounds.

Mixed hogs, 170 to 200 pounds average, sold at $8.20 to $8.50 per 100 pounds; mixed, 210 to 250 pounds, at $7.90 to $8.20; and the bulk of sales at $7.90 to $8.40 per 100 pounds.

In the heavy classes, throw-out packing sows were selling at $6.50 to $7.35; rough, heavy packing at $7.40 to $7.65; and heavy packing, and fine hogs at that, were selling at $7.65 to $8.00, fully a cent a pound below the top of the market.

Other grades sold as follows: Fair to choice light, $8.55 to $8.90; light light, 135 to 165 pounds, $8.10 to $8.60; pigs, good to fancy, $6.50 to $8.40; pigs, inferior to fair, $4.25 to $6.25; boars, inferior to choice, $1.00 to $2.50; stags, subject to dockage, $7.90 to $8.60; government throw-outs, $4.50 to $6.00; government pigs, $1.00 to $3.50 per 100 pounds.

It will be seen by this summary that the best hogs are not bringing the best price per pound, and it is almost safe to say that the market is upside down.

Fresh Pork All the Year.

Here is the way a farmer in South Dakota has fresh pork all the year round: He takes the whole hog, dresses and bones it and slices it into pieces that contain if possible both fat and lean. He then salts the meat about half as much as he would for the table, places it in a pan of hot lard and leaves it there until it is half cooked. This kills any disease germs that may be in the meat and helps to preserve it. He afterwards packs it in earthen jars, covering it with its own lard. The meat is always as fresh as when first killed. One should take care when removing meat to cover that remaining with hot lard taken from the jar.

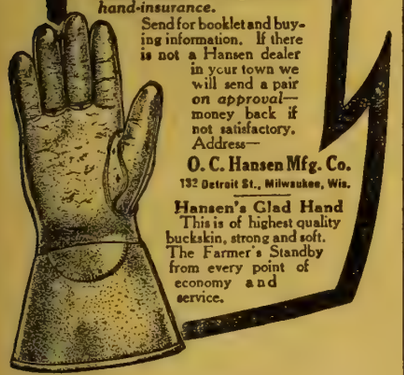
Hitch Up With Hansen

You can—easily. This Dan Patch keeps your hand free and safe from hurt, yet, with lining and without, never hinders a movement of your fingers. Flexible and strong, it seems built exactly to suit *your hand.*

Hansen's Gloves

are made of the best leathers the world affords—selected for softness and strength. In 500 styles for every hand at every work. Washable and lasting.

The Hansen line includes gloves for rough work and light chores. Special Thresherman's Gauntlet—gloves for autoist, cyclist, sportsman, etc. There are gloves for women's and boys' wear—all with the double economy of long wear and *hand-insurance.*



Send for booklet and buying information. If there is not a Hansen dealer in your town we will send a pair *on approval*—money back if not satisfactory. Address—

We Are in Favor of All Foreign Farm Productions Admitted to This Country Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

We Are Strenuously Opposed to the Admission of Any Foreign Products or Manufactured Goods Free of Duty, But We Are Not in Favor of Any Prohibitive Tariffs.

No matter what laws have been passed by Congress, we still believe that the most important item we can publish at the present time is our industrial policy, so far as it relates to the tariff. We therefore repeat our views on that question.

The National Farmer and Stock Grower is in favor of the United States Custom House collecting by law a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, the amount of said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government can be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people. We are in favor of duties being levied upon all manufactured goods admitted to this country for the double purpose of furnishing revenue and for the protection of our manufactures, for the reason that all interests are entitled to protection, if it is accorded to anyone.

With moderate import duties received by the United States on various products as heretofore collected the total amount that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be obtained by direct and unnecessary taxes upon our own industries. The foreign goods admitted free of duty displace home productions and result in higher prices to the American consumer and higher taxation also upon our own products and incomes to make up the lost revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he is a part. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted, in compensation for the taxes we have to pay on our own. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country is far better off without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next, but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and general discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers. The farmers who can provide for themselves will be slow to increase their products in the face of injurious legislation in which their interests have been utterly ignored.

Wore It Off.

An especially enthusiastic lady tourist had kept up her Gatling fire of questions until she had thoroughly mastered the geography of the country. Then she ventured to ask the driver how he had lost his finger.

"Cut off in an accident, I suppose?"

"No, madam," he said. "I wore that finger off pointing out scenery to tourists."

Weight Counts More Than Numbers.

Whatever there may be in the matter of a meat famine during the next year, it will be due more to a shortage of corn than to any other cause. Although cattle, hogs and sheep are enumerated by the head, the weight is also a great consideration. Two little 800-pound steers are required to equal one steer weighing 1,600 pounds, and in a general way there are more light steers marketed than heavy ones. When it comes to feeding the people, it is weight that counts, and to make the weight corn is required in abundant quantities. Thirty years ago people who were watching the live stock markets did not figure upon the number of pigs but upon the quantity of corn and other available feeds, and now that there is an appearance of a shortage in the meat supply, the whole world appears to be counting the pigs and disregarding what makes the weights. Whenever we get another full corn crop to feed cattle and hogs we will have the cattle and the hogs to feed.

In the live stock markets of the country breeding ewes are selling higher than fat muttons.

Tire Cost Cut Four Ways

We claim your favor on No-Rim-Cut tires solely on the ground of saving.

We cut tire bills in four ways which no one else employs. That's how we won the world's largest tire business. And that's how we are going to win you.

Way One—In these tires we end rim-cutting—make it impossible. We do this in the only feasible way—a way which we control.

With old-type tires—clincher tires—rim-cutting ruins almost one tire in three. That is shown by most careful statistics.

Way Two—We add to our tire cost $1,500 daily to final-cure these tires on air. That is done to save countless blow-outs.

No other tire maker does this, because of the extra expense.

Way Three—We alone use a patent method to prevent tread separation. We paid $50,000 for it.

This way reduces by sixty per cent the danger of loose treads.

Way Four—We limit our profit to 8½ per cent. By matchless output and modern equipment we have brought tire cost to minimum.

As a result, these costly tires—No-Rim-Cut tires—now cost you no more than other standard tires. They used to cost one-fifth more.

So you get all these savings, which cost us fortunes, at no extra price. Do you think it wise, under these conditions, to go without them all.

Go see these tires—now the rulers of Tiredom. Our dealers are everywhere.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St. Louis. The announcement is made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale ring were originally well-bred Range Horses. The next three Auctions will be held on

Thursday, October 16,
Thursday, October 30,
—and—
Thursday, November 13,

which is the last sale of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is good, especially for well-bred Mares and Geldings in fine condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Prize-winning Jacks From Tennessee.

Thirty days ago Thos. H. Ezell, of Mill Creek Stock Farm, R. F. D. No. 7, Nashville, Tenn., wrote that he had just returned from the Greater New York Fair and Exposition. With his jacks, jennets and mules he had just won thirty-one first awards, fifteen seconds, nine thirds and three fourths; also four loving cups and medals. He took championships with his good two-year Ezell's Champion; another with Tennessee's Choice; and another with a yearling mule. We have not the space to mention all of his winnings, but when last heard from he was at Gallatin, Tenn., where he had taken fourteen first prizes. His card is on page 20.

A Top Load of Hogs.

On Friday, September 26th, Capt. R. M. Fountain, a regular shipper for many years from Boone county, Missouri, was at the National Stock Yards with a load of hogs of his own raising and feeding that averaged 200 pounds, and sold at $9.00 per 100 pounds, which was not only the top of the local market, but the same as the top in Chicago and 42½ cents higher than the top in Kansas City. The hogs were fine and fat, and there were heavier loads that sold at a less price per pound.

CHICAGO LIVE STOCK.

Basis of Sales on Last Day of the Month of September.

Tuesday, September 30th.—Receipts of cattle were 7,000 head, including 3,500 head Western rangers. The market was very dull and slow with bids generally lower because buyers expect a big run on Wednesday. Many medium steers were carried over because bids were not satisfactory. The supply sold mainly at $8.25 to $8.80, with a few at $9.00; cows and heifers ruled weaker with the demand slim; common to medium sold at $5.60 to $6.50; good to choice, $6.60 to $7.50; fat heifers, $7.50 to $8.50; canners and cutters, $4.00 to $5.00; bulls were also lower at $5.75 to $7.40, including bolognas at $5.80 to $6.30; veal calves sold stronger at $11 to $11.75; stockers and feeders were 10c. lower at $6.50 to $7.85.

Hogs.—Receipts, 18,000 head; good hogs were strong, but the other grades were no better than steady; at the start a few sold 10c. higher; top reached $9.10, with the bulk of sales of packing class at $8.10 to $8.45. About 4,000 head were carried over. Many pigs sold at $6.00 to $7.00.

Sheep.—Receipts, 35,000 head; heavy sheep were scarce and sold strong with the ewes at $3.75 to $4.30, and the wethers at $4.00 to $4.75; fat lambs sold 10c. lower at $7.00 to $7.30; feeder lambs met with a strong demand at $6.25 to $6.60—all quotations being at the price stated per 100 pounds.

St. Louis Mule Trade.

At the St. Louis National Stock Yards several thousand mules are on sale all the time. Most of these mules have been fattened since arriving from the country. The mule is the only animal that can be kept in a stock yard over a day or two without loss. Some mules brought in thin are on feed quite a while, and the difference between condition coming in and going out is remarkable. They arrive in farm order and go out in perfect working condition. They arrive in mixed loads and go out classified. Good, big mules are selling strong; cotton mules, 14.3 to 15.2, are also strong; mining mules are in good demand; but plain, small, thin, rough, green, common and blemished mules are not selling quickly and cannot be fed in the yards without eating their heads off. The information comes from Holland, Nugent & Maxwell Bros. Commission Company, who are receiving and selling mules every day in the week.

Light Hogs Still on Top.

On Wednesday, October 1st, at the St. Louis National Stock Yards, the best price, $8.85 per 100 pounds, was paid for a load of hogs shipped by Roundtree & Young, of Dade county, Missouri, that averaged only 175 pounds. The price paid was 25 cents per 100 pounds higher than any hogs sold at Kansas City on the same day. St. Louis always shines as a hog market, and especially so when light hogs are in demand, for the reason the market is the favorite buying headquarters for many packing houses towards the East that only slaughter light hogs. On the same day we refer to, Baltimore took 1,051 hogs from St. Louis; Detroit took 1,340; New York City, East Buffalo, Pittsburg and Shamokin, Pa., Wheeling, W. Va., and other cities also bought light hogs at St. Louis.

ARGENTINE BEEF IS O. K.

Government Chemists Find It is Wholesome After Long Freezing.

From Washington, D. C., on September 28th, it was announced that all beef imported from Argentine has had the stamp of approval of the government chemists.

Tests at the New York laboratory of the Bureau of Chemistry showed the carcasses of a high standard.

These tests were applied entirely to the physical condition of the beef, not to the market grade.

Chemists examined the beef carcass by carcass and found that it kept well in transit. Some were skeptical, but they found that the long shipment did not affect the condition.

This beef from Argentine is frozen and therefore seems different to the consumer than the ordinary American variety. American beef is merely chilled, packed in ice for shipment.

The New Tariff Bill.

We have not the full tariff bill, but the following is about correct: Bread on free list; butter, duty reduced from 6 to 2½ cents a pound; cabbages and cattle on free list; cheese, duty reduced from 6 to 2½ cents a pound; corn meal, cream, eggs, flour, fresh beef, lard, milk, potatoes, all on free list; poultry, duty reduced from three cents to one cent a pound; prepared meats, free; rice, duty reduced from two cents to one cent a pound; sheep, free; sugar on free list after March, 1915; swine, wheat, wool, all free, and woolen goods amply protected. It is still a protective tariff, with protection denied the farmer.

Mobile and Ohio Activity.

The National Live Stock Reporter mentions that the M. & O. Railway has recently brought in seventy-nine cars of stock to the St. Louis market in one day upon a new bi-weekly special service from the Southeastern States. The article in the Reporter concludes by saying that the M. & O. is giving the service and is getting the business. In this connection it is well to state that there is not a better live stock railroad in the United States than the M. & O. Ten years ago that road had nothing of consequence to haul either way, and live stock had to be grown to furnish the hauling. Under the active energy of Mr. W. G. Harding, General Live Stock Agent of the road, inducements were offered owners of pure-bred beef cattle to hold sales in the South. Mr. Harding anticipated by ten years the work of the Meat Packers' Association in placing bulls where they were most required, and the shipments from the South to the St. Louis market had the seed sown by the man who is now bending every energy to haul the stock to market. Any solicitor can divide shipments when they are plenty to divide; but it takes a genius to get the business when it has to be created as well as routed. Such has been the record of the M. & O. the past ten years. Some of the shipments diverted to that road have been little short of highway robbery.

HERE'S THE TONIC

THAT MAKES FAT STOCK

Healthy, vigorous stock is the only kind that makes you money.

Put your horses, cattle, hogs and sheep in fine condition and then keep them healthy, fat and strong by using the famous

Dr. LeGear's Stock Powders.

Unrivalled as a milk producer—gives horses strength and endurance, slick coats and high spirits. Adds heft to your beef, steers and hogs—makes the wool grow on your sheep's back.

It is a tonic that makes stock relish and assimilate their feed—a general toner of the system.

Large packages 25c, 50c and $1.00.
25 lb. pails, $2.50—100 lb. drums $9.00.

Druggists and Dealers everywhere carry a complete line of Dr. LeGear's Famous Stock and Poultry Remedies.

Relief For Rupture Without Operation

We Allow A 60-Day Test—Entirely At Our Own Risk—To Prove It

No longer any need to drag through life at the mercy of leg-strap and spring trusses. No reason in the world for letting them force you to undergo a dangerous operation.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of **good** enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23rd St., New York City

A Trotting Wonder.

"To appreciate the surpassing merit of Peter Volo's performance at Columbus last week, when he trotted two heats in a race in 2:06¼ and 2:07, one must compare it with other colt races. Nothing that a two-year-old has done can hold a candle to it, for where two-year-olds are considered there is a vast difference between going one fast heat in a race or against time and going two record-breaking miles one right after another, as Peter Volo did at Columbus.

"When Native Belle set the record for two-year-olds at 2:07¾, in the race for the Kentucky Futurity, she trotted her first heat in 2:12¾, five seconds back of her limit, so that she was just nicely warmed up for the supreme effort. And Colorado E., when he lowered the record for three-year-olds to 2:04¾, where it now stands, went an easy mile in 2:11¼ in the first heat of the Kentucky Purse, and then was cut loose, fresh and full of trot in the second round.

"But the great son of Peter the Great, 2:07¼, trotted his first heat in 2:06¼, with the last half in 1:02¼—enough to pump out anything but a veritable flying machine—and came right back in 2:07. Both heats were faster than any other two-year-old ever trotted one heat, and, as stated in the Herald the next day, they averaged faster than the fastest two heats to the credit of any three-year-old trotter or pacer."—New York Herald, September 28th.

Horse Sales at St. Louis.

In an interview with Mr. T. H. Holland, of the firm of Holland, Nugent & Maxwell Bros., at the St. Louis National Stock Yards, he said it was very difficult to quote horse prices, for the simple reason that horses could look very much alike and be sold a hundred dollars apart in price in the auction. He reported his last sale as follows: "We had 900 horses to sell and had all classes, from $5.00 to $300. Some horses were sold $30 to $50 less than at the best time last spring. We cleaned up in good shape; all our horses sold. Be careful and buy your big horses with quality, full age and reasonably sound, and remember that big side bones are a bad thing and take from $40 to $75 off a good horse. Your Southerners should be broke, as you know that all Southern buyers want the horses to work single, and you lose just as much on a Southerner that does not work good as you do on a good horse. When they come back for being green single, or won't drive out of the shed, they will bring from $25 to $40 less than they do if they are broke. Now plugs can be sold from $15 to $50; there seems to be some demand for them; but the kind of horses the shippers suffer the most on are good, young, sound horses, four years old, that will weigh from 1,100 to 1,250 pounds, thin in flesh and not in condition to come to market, and they should be let alone." Holland, Nugent & Maxwell Bros. hold auction every Monday and Tuesday and keep it red-hot all the time.

Southern Cattle at St. Louis.

In the Southern Cattle Division at the St. Louis National Stock Yards on October 1st, 169 grass Texas steers, 1,016 pounds average, sold at $7.00 per 100 pounds; 108 steers, 886 pounds, at $6.35; 297 steers, 858 pounds, at $6.30. Sales from other states in car lots were: Fourteen Tennessee mixed, 665 pounds, at $4.75; twenty-two head Mississippi mixed, 684 pounds, at $4.40; eighteen head same, 571 pounds, at $4.35; forty-five cows, 614 pounds, at $5.25; fifteen cows, 547 pounds, at $4.35; seventeen calves and yearlings, 387 pounds, at $4.75; twenty-three calves and yearlings, 328 pounds, at $4.65; thirty-three Florida mixed, 472 pounds average, at $4.75; twelve Alabama cows, 575 pounds, at $4.40; and Alabama calves and yearlings, 220 to 450 pounds, at $4.60 to $5.50.

Sells Lambs at the Top.

"Joseph E. Howell, one of our old-time friends from Boone county, Missouri, was in to-day with a car of sheep and lambs that contained sixty head of lambs that weighed 69 pounds, and sold at $7.40, which was the top of the market. Mr. Howell was highly pleased with the sale of his stock."—Live Stock Reporter, October 1st.

St. Louis Sheep and Lambs.

On October 1st, at the St. Louis National Stock Yards, the best lambs offered sold at $7.40 per 100 pounds, while other good ones went at $7.25 to $7.35, and medium grades at $6.85 to $7.15, and fair kinds at $6.25 to $6.75, and the culls at $5.00 to $6.00. No yearlings were offered, but if here would have sold at $5.50 to $6.00, and there was some inquiry for them.

Most of the good mutton sheep sold at $4.35 per 100 pounds, with others that were not strictly good at $4.25 to $4.30; choppers and good stockers went at $3.25 to $3.65; plain stockers, $2.50 to $3.10; canners and cull sheep, $2.00 to $2.40; and bucks, $3.25 per 100 pounds.

Yearling Sheep Bring $9.35.

That stock feeders do not have to bring cattle to the old-time weights of 1,600 to 1,800 pounds in order to obtain the top price per pound on the market was well sustained by the sale of fourteen head yearling steers averaging only 967 pounds, which being shipped from Morgan county, Illinois, to the St. Louis National Stock Yards by Mr. J. J. Bull were sold at $9.35 per 100 pounds on October 1st, which price was not only the top of the market for the day, but it is doubtful if any heavier load would have sold any higher. Although these were Illinois cattle, the significance of these weights and such prices is more to such states as Mississippi and Alabama, where raising light-weight fat steers of high quality ought to be a picnic.

HORSE AND MULE NOTES.

It is reported that the horsemen of the Union Stock Yards, Chicago, will establish a selling agency at New York City.

The annual imported Shire mare sale by the Trumans' Pioneer Stud Farm of Bushnell, Ill., will be held on December 11th, 1913.

The thoroughbred horse is at no discount in England. At a sale held by Tattersalls at Doncaster during race week, 320 yearlings brought the astonishing total of $1,114,990, or an average of $3,485. In 1910 the average was $1,720 for 271 head, and in 1911 it was $2,465 for 298 head. Prices have thus doubled in three years. The top price of the sale was $30,500.

In the month of September, the St. Louis National Stock Yards received 14,969 horses and mules, which brings the total so far this year up to 105,627 head. And there are three months more in the year yet to be heard from.

SAVE-THE-HORSE

(Trade Mark Registered.)

Gets Advice; Sells Horse for $800.

Ogden, Ia., April 18, 1912. Troy Chemical Co., Binghamton, N. Y. Gentlemen—I have used Save-The-Horse for years, and I never found any case but it would do just what you claim for it. I have a horse I want to race and want your advice and another book. I lost or mislaid mine. The last time I wrote you your advice and treatment did the work. I sold the horse for $800.
Yours truly, H. S. HELPHRY.

WE Originated the Plan of—Treating Horses—Under Signed Contract to Return Money if Remedy Fails. But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business man the world over, on every kind of case, and advice—all free (to horse owners and managers).

TROY CHEMICAL CO., 62 Commerce St., Binghamton, N.Y.
Druggists everywhere sell Save-the-Horse WITH CONTRACT or sent by us Express Prepaid.

Don't confuse this with ordinary "make-shift" roofings. We guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically and permanently.

Marseilles, Ill.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MISSOURI NATIONAL CONTEST.

Egg Laying at Mountain Grove, Mo. — Breed Averages — Individual and Pen Records.

Report of First Nine and a Half Months—Seventy Pens, Ten Hens to Pen—700 Birds in All.

Eleven Hens Pass the 200-egg Mark in Nine and a Half Months—The Next Contest.

The splendid record which the hens made for the first seven and a half months of the National Egg-laying Contest at Mountain Grove was greatly affected during July and August by the unusually hot weather. The extreme heat simply played havoc with the hens. To keep them in a trap nest even long enough to lay, the hens would suffer intensely from the heat and several of them died from the effects of same, even when given the best of care, and even though they were released every hour from the trap nest. On the hottest days they were released oftener than this, but still many of them came off the nests in such a condition that it took several hours for them to recover. In many states the farmers have suffered great loss from the heat and drouth. Such high temperatures are unusual in Missouri.

The total number of eggs laid in August was 7,691, which makes a grand total of 87,764 for nine and a half months. A pen of Rose Comb White Leghorns, No. 10, from Maryville, Mo., won the silver cup for August with 171 eggs. The English pen of Single Comb White Leghorns still leads the contest by 271 eggs. The leading hen is a Buff Wyandotte, No. 860, which has laid 230 eggs to date. Two other hens are only four eggs behind her. Many of the varieties are changing places each month, and as the contest does not close until November 15th, there will yet be many changes. Some hens which made good records last year are not doing practically anything this year, and many which did not do well last year are doing extra well this year. The most consistent layers in the entire contest have been the Silver Wyandottes. They have held second place for many months, and this variety also averaged 160 eggs per hen last year.

The Ten Highest Pens to August 31.

The Next Contest.

The pens have practically all been filled for some time. We can accommodate one more pen each of Buff Leghorns, Brown Leghorns, R. C. White Leghorns, Campines and Partridge Wyandottes. We will have pens from all parts of Missouri, the United States, Vancouver Island, Canada and England, and we are importing three pens from the New Zealand and Australian contestants who have been making such wonderful records in the contests of those countries. We expect to see if their birds will make as good or better records here than our own American birds. The records of the hens from these several countries will be watched with unusual interest. We believe the American hens, which have been properly bred, will be able to hold their own with the hens from any country. The last few years many breeders have been paying closer attention to selection and breeding for egg production and we expect to see the American hen and the Missouri hen hold their own. The hens which win in the next contest will centainly be the world's champion layers.—T. E. Quisenberry, Director, State Poultry Experiment Station, Mountain Grove, Mo.

FALL POULTRY MANAGEMENT.

Instruction For the Beginner and Reminders For the Experienced.

Where late broods of chicks are still not well feathered out, it is best to keep the hens with them till they (the chicks) have obtained enough feathers to protect them from cold during the chilly nights. The mother hens will often show a decided disinclination to remain with their chicks, but they are needed to provide warmth, and generally they are getting more grass with the chicks than they would in the poultry yard.

As long as the different broods of chicks can be kept by themselves it will be a simpler method to feed them than when they are mingling with the mixed flock of old and young. Corn can be fed them in greater quantities than can be well fed to the old hens. On the chicks it will not be likely to produce surplus fat, while on the old hens it is almost certain to do so.

Soak the corn and oats, if they be not cooked, to make them more easily digestible by the fowls. Sprouting oats for them gives a very desirable kind of easily-digested food. The oats can be put in shallow boxes and wet daily by sprinkling, or dipping the boxes in water, which is the quicker way. In eight days or less the oats will have sprouts on them two inches long, and are in the right stage for feeding. A new lot should be put to soak each day and soaked twenty-four hours before being spread in the boxes for sprouting, and a new box should be started each day. It sounds like a long process, but is not. After a method of doing this has been established, it will require but a few minutes each day. It provides green and grain food at the same time. This feed is growing in popularity with all poultry raisers.

Getting rid of the old stock is a necessity at this time of year. If the hens have not been marked by legbands or in some other way, so that their ages are known, it is best to get rid of the fattest and heaviest. It is probable that the fattest birds have not been laying so many eggs as the thinner birds, or perhaps they are fatter because they are older. Anyway, a bird that is already fat at this time of year does not hold out much promise of egg production during the coming winter.

In the fall the preying animals must be looked out for. One farmer that raises hundreds of fowls annually tells the writer that every fall they have a period of fighting skunks, which do not seem to bother them at any other time of year. It is probable that in the fall the young of the animals that hunt fowls have just reached the stage of development where they must look after themselves, and they have not the caution of the older animals of their kind. They often make long journeys to places where they are not being expected and hence are not guarded against.

Don't forget the grit for the growing chicks, even though they have the run of the farm. Often grit is not easily obtainable by them, especially on land where the soil is a black loam and gravel not plentiful.

High Hog Prices Expected.

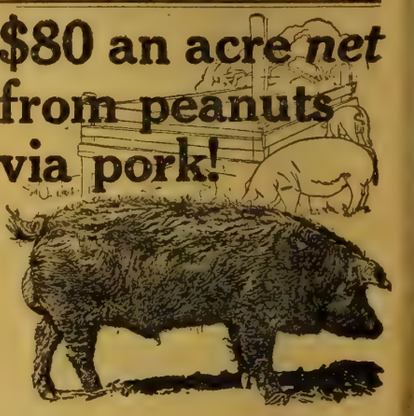
"Confident prediction of a phenomenally high hog market in 1914 is made by many traders. Prices may work a little lower in the near future, but wait until next March, they argue. For three months or more every market in the country has been flooded with pigs and immature stuff, and in the long run that must tell. Corn is usually blamed for sick pigs, but this year there was plenty of old grain and the new crop matured early, so that old arguments cannot be pressed into service. Anybody who has watched the course of market events realizes that we will run into a shortage in 1914. Western packers here this week attending the convention coincide in this view, pointing out that the short corn crop will merely aggravate the deficiency."—Chicago Live Stock World.

St. Louis Poultry Show.

At the St. Louis Coliseum, on Thanksgiving Week, there will be held the usual annual Poultry Show, with a premium list amounting to $5,000. E. W. Grove, Jr., donor of the famous $500 Grove Trophy for White Leghorns, is President of the Mississippi Valley Poultry Association, under whose auspices the show is to be held. Judge W. H. Henderson, a famous fancier and breeder of Barred Plymouth Rocks, is Vice-President; and Henry Steinmesch, equally famous as breeder and fancier and show conductor, 220 Market street, St. Louis, Mo., is Secretary and Treasurer.

The pure-bred stock exhibit of the Missouri State Fair consisted of 2,900 animals.

$80 an acre *net* from peanuts via pork!



An acre of peanuts will produce three times as much pork as an acre of corn. Yet peanuts are raised by the same methods of tillage as corn, and instead of *depleting* the soil, as corn does, they enrich it.

At the Arkansas experiment station an acre of peanuts made 1,250 lbs. of gain on hogs, while an acre of corn made only 436 lbs. And 1,250 lbs. is not an extra good showing. Mr. Wright of Lufkin, Texas pastures his hogs on peanuts and makes *1500 to 1800* lbs. of pork per acre! Along the

Cotton Belt Route in Arkansas and Texas

peanuts **alone** pay big. J. M. Jones a farmer who lives 8 miles from Jonesboro, Ark., sold $953.32 worth of Spanish peanuts and peanut hay from 10 acres. Land that will yield big peanut crops can be bought **now** at $25 to $30 per acre.

Peanuts is just **one** of the money making crops of Arkansas and Texas. When you get fine land at $15 to $30 per acre; when you have a **mild short** winter and don't have to stall feed stock; when you get **all** the rain that **any** crop needs (40 to 50 inches), you'll make big money, no matter what you raise. With good roads, good schools, close markets, phones, rural delivery, churches, etc., you don't have to sacrifice **any** social advantage in Arkansas and East Texas.

Books by a farmer—free!

We got a practical farmer to travel all along the Cotton Belt Route and **talk** with the farmers themselves, get **pictures** of their farms and their **personal** statements. Because he **was** a farmer this man knew what you wanted to know about these sections and he tells you in these free books—showing **scores** of actual **photograph** pictures of the farms he visited. You must not miss seeing these books. Send me your name and address on a post card today.

E. W. LaBeaume, Gen'l Passenger Agent, 1709 Pierce Building, St. Louis, Mo.

Low Fare Excursions via Cotton Belt Route on 1st and 3rd Tuesdays each month. Ask me about them, write!

COLOR OF SOILS.

The General View of the Farmer is in Line With the Knowledge of the Scientist.

Is the color of a soil an index to its agricultural value? Why is one soil black and another red or yellow? These are some of the questions which are taken up in a recent bulletin by the Bureau of Soils of the Department of Agriculture.

The differences in color of soils was one of the first facts about them to impress the agriculturist and naturally he made a study of the subject and came to conclusions, some of which were right and some of which were not. Geologists, too, have paid a good deal of attention to these various colors, but more in regard to their bearing on the origin and formation of soils than to their agricultural significance.

The bulletin states that theoretically the color is of importance as a guide to the origin and processes involved in the formation of the soil and as an indication of the relative age of any particular soil, and that it is of practical importance, because it determines to a greater or less extent the absorption of the sun's energy, and is often a guide to the drainage conditions, the crop adaptations and to the cultural methods best suited to the soil.

It is said that no soil colors are pure colors. but are simply shades and tints. Soils ordinarily called red get their color from oxide of iron, which itself is never a pure red, but varies from brown to yellowish, and when in the soil is still further changed by other substances. Colors range all the way from white of beach sands to the black mucks of swamps. The various colors are due to the content of white minerals, organic matter and iron oxide.

Light-colored soils, that is, white or grayish, are not worth much, as a rule, for general field crops, but are often valuable for special purposes. In moist climates such soils are poor in organic matter and in arid regions may contain a high content of alkali or gypsum.

Black soils are universally looked upon with favor. They usually contain a high percentage of organic matter and are well supplied with lime. The black color is thought to be due to the formation of humus by the action of the lime on the decaying animal and vegetable matter.

Red soils are highly esteemed in the cotton-growing sections of the South, where they are considered the richest. Some authorities take a red color to be an indication that the land is well drained. This they base on the fact that standing water would dissolve out the oxide of iron which coats the soil particles.

The only real agricultural value color has in itself is in its ability to radiate heat and absorb it. Colors also may have something to do with regulating the light intensity which influences bacterial and chemical reactions. Dark soils have been found to maintain a slightly higher temperature than light soils under the same conditions.

The Standard Bale of Cotton.

In response to a number of letters and telegrams from cotton producers to the effect that they are penalyzed for shipping bales larger than 27x54 inches, the United States Department of Agriculture has notified these correspondents that their safest course is to insist that ginners at once change their gin boxes to the size 27x54 inches. This can be done by ginners at a cost of not more than $5.00 to $10.00 per box.

This situation arises from the fact that on March 4th, 1913, traffic representatives of the South Atlantic and Gulf Steamship Conference agreed that on and after September 1st, 1913, "any bale from gin boxes of greater length or width than 27x54 inches shall pay an extra freight of $1.00 per bale."

Many ginners at once changed their gin boxes to meet the shipping requirements of the steamship companies, but other smaller ginners either did not receive notice of the change or else neglected to change their boxes. The result was that cotton producers who had their cotton ginned in gins that have boxes over the required size and have shipped this cotton, have been penalized the extra freight of $1.00 per bale.

The reason for the adoption of this rule by the steamship companies and other traffic representatives is, that it is more difficult to pack and handle bales of irregular size in cars or steamship holds.

The National Corn Exposition.

The Sixth National Corn Exposition to be held in Dallas, Texas, February 10th to 24th, 1914, will offer trophies and premiums amounting to thousands of dollars for individual ears of corn, ten-ear samples of corn, probably bushel lots of corn, also for grains and other kinds of farm seeds in peck samples, sheaves of grain, forage crops from four to six inches in diameter, bales of hay and other farm crops. For such crops as milo, Kaffir corn and other non-saccharine sorghums, samples of ten heads, also pecks of fresh grain, will constitute an exhibit.

Among premiums offered is the Grand Premier Trophy, valued at $1,000, presented by the Indiana Commission to the National Corn Exposition for the best ten ears of corn at the show.

Of equal value is the Kellogg Corn Trophy, presented by the Kellogg Post Toasties Company, for the best single ear of corn.

There will be several other championship cups for wheat, oats, barley, various grasses and grains, and $50,000 in prizes, consisting of cash, farm implements, etc.

The Secretary-Manager of the National Corn Exposition is Professor C. P. Bull, and he is now making his headquarters at Dallas, Texas. He will send intending exhibitors all the information they may need in the way of directions and explanations regarding the selection, preparation and general scoring points of different grains and forage crops that will be included in the contests. We have not yet seen the premium list, but Prof. Bull will send it to applicants directly it is ready.

The Flax Crop of the United States.

From the report of the Department of Agriculture: Condition—74.9 per cent. of a normal on September 1st, compared with 77.4 per cent. on August 1st; 86.3 per cent. on September 1st last year, and 80.9 per cent., the average condition on September 1st for the last ten years.

The indicated yield per acre, estimated from condition reports, is 8.4 bushels, compared with 9.8 bushels harvested last year, and 8.2 bushels, average yield harvested 1908-12. On the planted area, 2,525,000 acres, it is estimated the total final production will be about 20,000,000 bushels, compared with 28,000,000 bushels harvested last year, and 19,000,000 bushels harvested in 1911.

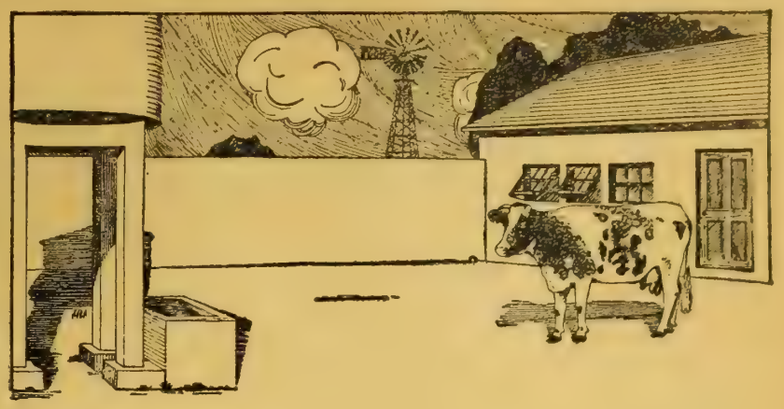
Splendid Crop of Rice.

In the last United States report the condition of the rice crop was placed at 88 per cent. of a normal, compared with 88.7 per cent. on August 1st; 88.8 per cent. on September 1st last year, and 89.2 per cent., the average on September 1st for the last ten years.

The indicated yield per acre, estimated from condition reports, is 32.3 bushels, compared with 34.7 bushels harvested last year, and 33.8 bushels, the average yield harvested in 1908-12. On the planted area, 824,100 acres, it is estimated that the final total production will be about 27,000,000 bushels, compared with 25,000,000 bushels harvested last year, and 23,000,000 bushels harvested in 1911.

Good Cash For a Bull.

G. W. Wilson, shipping from Callaway county, Missouri, marketed a choice 1,930-pound Shorthorn bull at $7.50 per 100 pounds. A gross price of $144.75 for an aged pure-bred bull looks as though they are worth as much worn-out but fat as they were in the beginning.



Almost everything but the cow

in this picture is concrete. The trough, the water tank, the wind wall and the stable—all concrete. Think of the things you can build on your farm—permanently of concrete:

Feed floors, fence posts, walks, foundations, steps, ice houses, cellars—think of it!

Over a million and a half farmers have had our free 168-page book "Concrete Construction about the Home and on the Farm." Have you had your copy? Write for it today.

ARGENTINE MEAT.

First Large Consignment Direct to New York.

The American Meat Trade and Retail Butchers' Journal of New York City, September 18th, contained the following:

"New York City received its first big direct shipment of Argentine beef on Saturday. Previous shipments of River Plate beef have reached New York via London, but last week's consignment of 1,000 quarters came direct to New York from Argentine on a Lampert & Holt Line steamer. The shipment was consigned to B. Frankfeld & Co., of the Produce Exchange, who disposed of the beef through local commission men. Mr. Frankfeld told the American Meat Trade Journal that the shipment had been broken up and that many houses were handling it.

"Owing to the fact that the beef was without United States meat inspection before and after slaughter, houses which are under government authority are not allowed to handle this meat. The fat of the imported meat will not be allowed to enter into the manufacture of oleomargarine.

"There has been considerable discussion regarding the selling qualities of Argentine meat. Some butchers maintain that it won't do at all for the average New York trade, while others contend that the meat is as good as any that enters the New York market. The disposition of this recent shipment will be watched with deep interest in view of this fact, as it is stated that coming direct to New York, and not being shipped by way of London, the beef will be able to get a fairer test. Also it is given out that this beef, which arrived last week, is not of the hard frozen variety such as reached New York on previous occasions, but is merely chilled at a temperature slightly lower than used in the case of refrigerated beef. It was expected that by the time the beef steamer reached port the tariff of 1½ cents per pound would have been eliminated by President Wilson, having affixed his signature to the Underwood bill. But the bill was in the hands of the Conference Committee last week and a duty had to be paid on the shipment."

The Concrete Silo.

"It has been made part of the duty of the Dairy Department of the Missouri College of Agriculture to assist farmers of this state in constructing silos. The College has no interest in any particular kind of silo, but tries to give unprejudiced information concerning all kinds that are adapted to the state. The College is interested only in having a large number of good silos built, regardless of what kind they may be.

"Since there are no dealers in concrete silos or agents distributing information in regard to them, the farmers of the state have to rely largely upon the College of Agriculture for information about building this type of silo. The assistance offered by the College is in the nature of supplying plans for forms, giving estimates for materials, and as far as possible sending a man to assist in starting the construction of the silo. The Department of Dairy Husbandry has been led to give special attention to supplying information concerning the concrete silo on account of the misrepresentation this type of silo has received at the hands of agents for other kinds.

Every silo which has been built according to the plans supplied by this department has been successful. Contrary to reports circulated by certain silo agents, not a single concrete silo built under College supervision has cracked. Among dozens of concrete silos that have been built in this state only four have cracked, and this resulted from insufficient reinforcement. These silos were repaired by putting hoops on the outside and filling the cracks with cement and are used to-day with success. If a concrete silo is properly reinforced there is absolutely no danger of its cracking.

The farmers are also informed that silage will not keep in concrete silos, which statement has no foundation. Reports from over forty farmers using concrete silos in Missouri state that their silage keeps perfectly. One concrete silo on a farm near Columbia has been used five years, and the owner says that not a bushel of silage has been spoiled in that length of time. The College of Agriculture has been entirely unable to locate a concrete silo where the silage has not kept when it was put into it in the proper condition.—F. M. Brandt, Columbia, Missouri.

The Range Horse Sales.

The season is drawing to a close. There will be three more sales conducted by Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards. One on Thursday, October 16th; one on Thursday, October 30th, and the twelfth and last sale on Thursday, November 13th. All farmers and stockmen, horsemen in particular, will find it to be to their advantage to attend these sales.

LIVE STOCK BREEDERS' CARDS.

BIG SALE OF FINE HOGS.

Poland-Chinas of Breeding, Size and Constitution; Also Two Stallions and One Jack.

We desire to announce that about the end of November we will hold a sale of magnificent Poland-China Hogs, two Stallions and one Jack. Due notice will be given in this paper of number to be offered. We have recently purchased fifty-five head of registered Poland-Chinas from the great breeders, Sheehy Bros., of Hume, Mo., and some of them will be included in the offerings. We also have of our own breeding that will be offered. Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Durocs, 100 to 250 pounds. All of the Poland-China Hogs were sired by the great Meddler and Wallbridge Boars and from some of the most noted Sows in America. Durocs sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for them and mention this paper.

POLAND CHINAS

Out of stretchy Sows and 1,000-lb. Boars. Buy them and win. Angus cattle. **J.P.Vissering, Box 1, Alton, Ill.**

POLAND-CHINA SWINE.

Spring Pigs that can't be beat at $20 and $25; Fall Pigs at $15. Come and see them or write.

D. F. BEAUCHAMP, Meredosia, Ill.

O. I. C. AND CHESTER WHITES.

February, March, April and May Boars and Gilts; no kin. Bred Sows, prolific large kind. Pedigrees furnished. Prices reasonable. Also S. C. White Orpington Chickens for sale.

RAYMOND RUEBUSH, Sciota, Ill.

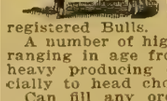
SALE OF HOLSTEIN CATTLE.

Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition.

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912, to March 1, 1913.



250 Matured Cows, very heavy producers, springing up ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds.

Can fill any order from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me concerning your wants.

JAMES DORSEY, Dept. F. & S. G., Gilberts, Kane County, Illinois.

DUROC-JERSEY SWINE.

Have some splendid Spring Boars ready for service; also one good Yearling Boar, a good breeder. Prices reasonable.

H. H. HOFMANN, R. R. 1, Belleville, Ill.

"THE PINES" HERD OF HOLSTEINS.

Breeder and shipper of high-grade
HOLSTEIN CALVES.
Prices reasonable.

J. W. FARRELL, Prop., R.F.D. 3, Elgin, Ill.

LARGE STRAIN POLAND-CHINAS.

I am offering nothing but Spring Pigs at present. The best that money can buy. They have a tendency to make extra large ones.

S. R. GRIGG, Proprietor,
The Golden Ridge Farm, Mulberry Grove, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

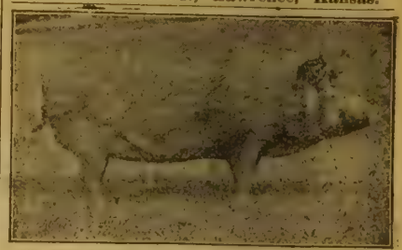
Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R.F.D. 2, Anita, Iowa.

PURE-BRED REKISTERED ANGORA GOATS.

Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.

R. C. JOHNSTON, Lawrence, Kansas.



TAMWORTHS FOR SALE.—The Bacon Hog; the largest and most prolific breed; early to mature, economical feeders and unsurpassed as Range Hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1912, including a bunch of championships. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars, 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

KENTUCKY JACK AND PERCHERON FARMS (Successors to the Cook Farms and the Cloverdale Jack and Percheron Farm).

Boars make splendid cross on lard-type Sows. Increases size of Litter and Pigs. Earliest to mature; healthy, gentle, good grazers. Fine lot healthy Spring Pigs. Dam of these Pigs has record of nineteen Pigs in one Litter.

Write for descriptive booklet,

T. C. KIMBER,
P. O. Box 1212, - St. Louis, Mo.

THE HARDY, PROLIFIC, MULE-FOOT HOG.

350 Big-Type, Mule-Foot Hogs of all ages for sale. They are the best and hardiest for the average farmer; also Shetland Ponies and White Leghorn Eggs for sale. **J. H. DUNLAP, Box 373, - Williamsport, Ohio.**

MILL CREEK STOCK FARM.

(The Home of the Starlights.)

THOS. H. EZELL, Proprietor,

Breeder and dealer in registered high-class Starlight Jacks and Jennets from four months to eight years old. (No partial Jacks). A written guarantee. Send for catalog.

R. F. D. 7, - NASHVILLE, TENN.
Long Distance Phone, Main 1326.

The Jersey

The Jersey gives richer milk and more butter than any other known breed, at a lower keeping cost. She does it continuously and persistently. Her milk and butter bring better prices than the product of any other dairy breed. That's where quality *does* count. Jersey facts free. Write now. We have no cows for sale.

AMERICAN JERSEY CATTLE CLUB
324 W. 23d Street, New York

BLOODED STOCK NOTES.

Mr. J. P. Vissering, the veteran breeder of Aberdeen-Angus cattle and large Poland-Chinas, has a small card in this edition, and it is worthy of attention. Look at the live stock breeders' advertisements on page 20.

Mr. T. C. Kimber, whose address is Postoffice Box 1212, St. Louis, Mo., and whose farm is near Ironton, Mo., has restored his card advertising Registered Large Yorkshire Hogs to the paper for the reason that he has a large lot of fine spring pigs for sale. The Yorkshire is one of the great breeds that grows largely into bacon, and a farmer makes no mistake when he gets a start of the breed. The bacon hog is in great demand and bacon on the breakfast table is an expensive necessity, if not a luxury. Mr. Kimber has a sow that has just farrowed the extraordinary litter of nineteen pigs and all doing well.

Mr. D. F. Beauchamp, of Meredosia, Ill., is again in a position to offer some fine Poland-China pigs of his own breeding for sale. He has advertised in this paper for about eight years and sold many pigs by doing so. His customers feel pretty good when they see the pigs he sends them. His card is on page 20.

Mr. Charles Ford, of Mortonsville, Ky., breeder of Tamworth swine, is out on the circuit winning prizes at the different State Fairs, but he will soon be home again and always has pigs of his own breeding for sale that are classesd as excellent in any company. The Tamworth hog is more noted for superior bacon production than for good looks except upon the basis that "handsome is as handsome does."

Mr. Wilder Carpenter, of Marmaduke, Ark., advertising under the name of the Grandview Breeding Farm, has recently purchased from Sheehy Bros., of Hume, Mo., fifty-five head of splendid Poland-China hogs. It is one of the finest lots of Poland-Chinas, and, added to the herd of the Grandview Breeding Farm, will constitute stock far beyond the average in any state. Mr. Carpenter will hold a public sale of seventy-five head of Poland-Chinas, two stallions and one jack towards the end of November. It will be a very interesting event. Mr. Carpenter has prize-winning hogs, and that is sufficient guarantee for the stock on any farm. Marmaduke is situated on the St. Louis and Southwestern Railway, familiarly known as the Cotton Belt Route, and is north of Paragould, Ark., and is easily reached by visitors.

Mr. A. F. Siefker, whose farm is on Route 1, Defiance, Mo., has sent in his fall advertisement of high-quality and big-strain Poland-Chinas. Just at this time when we are expected to run into a shortage of hogs, and now that the quality counts more than it ever did before, such pigs ought to be snapped up in very short order. The card referred to is on page 20.

Dairy farmers will find it to their advantage to start the march of improvement and keep it up as best they can, not advancing beyond their means but working close up to all benefits that can be obtained with the means at command. It is easy to obtain a few grade heifers and a pure-bred bull of the Holstein breed, and they very soon develop a milk-producing herd that can return good money for the feed and care and a profit on the investment. Mr. J. D. Farrell, Proprietor of "The Pines" herd of Holsteins, R. F. D. 3, Elgin, Ill., has a card in the paper offering a few high-grade calves for sale. His advertisements do not stay in long, because it is usually a case of "first come first served" until they are gone. His card is on page 20.

Mr. H. H. Hofmann, who is on Rural Route 1, from Belleville, is the nearest Illinois breeder who advertises in The National Farmer and Stock Grower. He has a splendid herd of Duroc-Jersey swine and sells most of them by advertising in The National Farmer and Stock Grower.

Pure-bred pigs ought to be in good demand, and will be. The admission of pork and pigs free of duty will not stop the demand for hams and bacon. Be on the right side of the hog raising. Have hogs that get fat and shapely when they come to sell on the market. S. R. Griggs is one advertising fine hogs. His are Poland-Chinas. There are other good breeds, but he thinks the Poland-China is the best, and he has some good ones. He has a card on page 20.

The Cook Farms and the Cloverdale Jack and Percheron Farm of Lexington, Ky., have consolidated and will be known hereafter as the Kentucky Jack and Percheron Farms. J. F. Cook and H. T. Brown are the proprietors. They have recently bought the Union Stock Yards on West Fourth street, where they will have their sale barn. They will have in stock this season 200 head of mammoth jacks and Percheron horses. The catalogue will be ready November 1st and they will be glad to have all intending buyers of jacks and Percheron horses to visit their farms.

Mr. C. M. Winslow, Secretary of the Ayrshire Breeders' Association, Brandon, Vt., is sending out interesting data showing why you should select the Ayrshire cow. He makes all these items interesting and we are glad to receive them at this office.

Rules For the Use of Fertilizers.

1. Nitrogen (or "ammonia") encourages strong leaf, vine and bush growth.
2. Potash makes firm tuber, bulb and fiber.
3. Phosphoric acid makes blooms "set" and seeds and seed pods form abundantly.
4. If the wild growth on your farm is profuse and your tomato and melon vines run to leaf, your soil is rich in nitrogen.
5. If trees do not thrive, onions seem soggy and tomato vines lack sturdiness of stalk, the soil needs potash.
6. If your tomatoes, melons, grain and cotton fail to "set" plenty of seed and fruit, phosphoric acid is called for.
7. If you expect to take from your land a crop rich in leaf, as lettuce, increase the proportion of nitrogen in your fertilizer.
8. If potatoes or onions are desirable, provide plenty of potash.
9. If abundant corn, wheat, cotton bolls, melons, peaches, strawberries or tomatoes are wanted, see to the phosphoric acid.—Back to the Land.

A First-class Institution.

The L. C. McLain Orthopedic Sanitarium, 916 Aubert avenue, St. Louis, Mo., is one of the best institutions in the city of St. Louis. We are glad to have it represented in these columns.

Son of Lou Dillon.

Lou Dillon's two-year-old colt Ben Billings, by Bingen, 2:06¼, trotted a mile against time in 2:29¼, at the North Randall Fair, near Cleveland, a few days ago. He has trotted a quarter in 0:35 in his work and is booked for a record of 2:10 or better in his three-year-old form.—New York Herald.

FARCEUR—BELGIAN STALLION, THREE YEARS OLD. Champion at the Iowa State Fair of 1913. Exhibited by Wm. Crownover, of Hudson, Iowa. He was awarded the championship in one of the greandest exhibitions of Belgian horses ever seen in this country.

A Fine Assortment of Aluminum Ware

As a Subscription Premium in Connection With The National Farmer and Stock Grower, the Best Monthly Farm Paper.

Aluminum utensils have no equal as sanitary cooking vessels, and their light weight makes their use a pleasure. They will not rust, tarnish or chip, and will last a lifetime.

The assortment we offer, as illustrated above, consists of the following: Egg Separator, Coffee Strainer, Funnel, Measuring Cup, Salt Dredge and Tea Strainer, all of high quality, and of practical use in every kitchen daily.

SEND US ONLY 60 CENTS

And we will send you THE NATIONAL FARMER AND STOCK GROWER, the reliable and practical farm monthly, for a full year, and send you postpaid this splendid assortment of aluminum ware as a premium by parcels post. Satisfaction and safe delivery guaranteed. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Fruitman and Gardener.

We have made arrangements with the publisher of **The Fruitman and Gardener** whereby we can furnish both papers for the price of one. It is a limited arrangement on the co-operative plan that we help each other, giving our efforts towards increasing each other's business. **The Fruitman and Gardener** is all right in

every respect, with a special talent in adapting articles for all climates. No better paper is published for the money, and we have selected it as the best of several that have been offered. Anyone who will send us the usual fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower can select **The Fruitman and Gardener** for one year as a subscription premium. This offer will not last long, for the reason that the number we can accept on this half-price arrangement is small. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Gladioli.

When digging the gladioli bulbs in fall there are usually a quantity of small ones, so small that they scarcely seem worth saving. And yet they are too good to throw away. This year we had a present of a quart or two of these tiny things, many of them scarcely larger than a good-sized seed, yet the friend who gave them said that it was from just such that she got a start and that she thought some of them would bloom the first season.

They were sown with a drill—thicker than we would do again. By mid-summer flower spikes began to appear and early in September that row was a blaze of beauty, including a number of different varieties, some of which were as beautifully marked as an orchid. They are of the Lemoine type, with smaller flowers than some of the others, but certainly proved well worth the care given, and we shall remember in future not to throw away the wee bulbs, but treat them as seeds with which to brighten places where weeds might otherwise be allowed to spring up.

When taking up the gladioli, choose a warm day in late autumn and take up the entire plants, spreading them where they will dry, and in a few days, after they are well cured, cut the tops off an inch above the bulb and pack away in a dry, frost-proof place during the winter. If the cellar is damp, a closet may be preferable. When replanting in spring, make several plantings a couple of weeks apart to insure a succession of bloom; that is, if the bulbs are of large size. But if the tiny ones are used, they will vary so much in size that the bloom will be continuous from mid-summer until frosts come.—Bessie L. Putnam.

Among the Hardy Bulbs.

The busy woman who likes flowers will do well to look after the bed of hardy bulbs during September or October, for in few other classes of flowers may such rich and varied results be obtained at so small cost. They bloom almost ere the snow vanishes, and present exquisite coloring, graceful form, and in many instances delightful fragrance. Their season may be prolonged through all the months of spring, and there is comparatively little work about their care.

Select a well-drained plot; or, if it is not naturally well drained, dig the bed out, put in a few stones and then replace the soil, adding a generous supply of fertilizer from the barn-yard. Bulbs are all such hearty eaters that one can scarcely have the soil too rich, providing the fertilizer is entirely decomposed. Ground that is suitable to grow cabbage would raise bulbs if this restriction is enforced; but direct contact with the fresh fertilizer is almost sure to cause decay to any bulb.

Plant the bulbs from four to six inches deep according to their size. The small bulbs of the present season naturally seek a shallow position, and should be planted accordingly; but those older and larger need deeper planting.

Avoid stiff rows. A clump arranged as by nature is far more pleasing. A rule for planting bulbs in grass is to drop a handful where they happen to fall. This is in many instances quite as effective for bedding. Avoid mixing species. Massing different varieties of the same species is much better. Thus a bed of either hyancinths or tulips gives better results than would one in which the two were intermingled.

There are a number of the hardy bulbs which are cheap and easily grown that are too little known among flower lovers. Notable among these is the triteleia, an almost continual bloomer in the window garden during the winter months. Its delicately-tinted and perfumed flowers have the faint odor of the primrose, and while the blossoms are not showy but have rather the retiring habits of some wild flower, it is generally worthy of greater prominence.

The fritillaria, characteristically dubbed guinea-hen flower, quaintly checkered in purple and white, has no counterpart in our gardens. While the flowers are graceful in the extreme, their peculiar color and marking proclude combination with other flowers, yet as a group by themselves are as attractive as unusual.

Glory of the Snow, of the clearest blue with white eye, is a flower which is always pleasing; and as the star-like blossoms are borne in clusters it is a profitable plant in which to invest. Appearing about the time of the first crocus, or a few days later, it lingers some days after its companion has faded. It multiplies rapidly after once being established, and is admirable for planting here and there in the sods of the lawn, the tops of the plants disappearing before the grass is tall enough to mow.

The scilla blooms about the same time and is in numerous ways its equal. Its bell-shaped, drooping flowers are of the clearest blue, and are the last to linger of the very earliest spring blossoms, waning as the first of the hyacinths appear.

Everyone knows the hyacinths, from the early Roman to the last spike of the tall-growing varieties. But few are aware that in the Belgian hyacinth we may prolong the beauty of this blossom until the end of May, this late variety being of a clear blue, combining beautifully with the lily-of-the-valley and lacking only in fragrance. It requires the same care of the ordinary hyacinth.

Most of the above are very cheap, and a generous planting of at least a portion will yield a rich reward.

Of the standard varieties one cannot have too many. And whichever sorts are chosen, they increase so rapidly that one soon has enough and to spare. Cover with a generous coat of leaves at the beginning of winter; give rich soil; never make the mistake of cutting off the leaves as they begin to die, but instead allow them to ripen undisturbed, and you will have an abundance of blossoms.—Bessie L. Putnam.

CALLED ADULTERATION.

Tomato Canners Warned Not to Add Water to Canned Tomatoes.

There seems to be a general misunderstanding in certain localities regarding what constitutes adulteration of canned tomatoes, and for this reason many may find interesting and enlightening a repetition of the Department of Agriculture's food inspecting decision on this subject.

The can in any canned food product serves not only as a container but also as an index of the quantity of food contained. It should be as full of food as is practicable without injuring the quality or appearance of the contents.

Tomatoes are a food product which may be canned without the addition of any other substance; therefore the addition of water is deemed adulteration. Pulp has been discovered prepared from trimmings, cores and other waste material, which was added to canned tomatoes. This pulp is not a normal ingredient of canned tomatoes, and is, therefore, adulteration.

Also, if in the canning of a lot of tomatoes more juice is added than normally would be present, the same is considered an adulteration in the opinion of the Board of Food and Drug Inspection.

A number of decisions have been handed down in favor of the United States in suits brought against companies that have shipped in interstate commerce canned tomatoes adulterated with pulp or an excessive amount of juice. To prevent any unwitting violation of the law by others, who may be ignorant of what adulteration of canned tomatoes is considered to mean, these particulars are once more called to the public's attention by the United States Department of Agriculture.

Grandmother's Garden.

Fashions move in cycles, in floral realms as surely as in those of dress, and the flowers which were the pride of grandmother now find an honored place in the best of homes. There was a peculiar fitness in the brilliancy of the poppy, which mingled freely with the vegetables and made beautiful the plot which so well served its part in the sustenance of the family. The seeds were never saved, but nature did the sowing, and as the plants came up like weeds in spring, those only were reserved which were not in the way of the vegetables. To-day we have the more intense shades of the original poppies, and yet we still cling gratefully to the white-edged, silken beauties that link with the long ago.

Every now and then we find springing up some old garden plants which we had thought out of existence long ago. Notably among these is the Campanula or bellflower, with its spike of blue pendant bells. Again, the Blackberry Lily, a member of the Iris family, with curiously-mottled flowers, and seeds which well imitate a ripe blackberry, may be found springing up anew years after it had presumably become extinct in that locality.

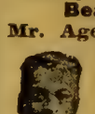
Let us learn from the persistence of some of these old-time flowers upon what to depend if too busy to give more than passing attention. We may all have our row of hollyhocks screening undesirable views from the front yard; our poppies in the garden, peonies by the gate, and not only in flaming red, but in pink, rose and white, fragrant as a rose and very much larger. Let us, then, make the most of our opportunities, and where only weeds grew give place to the hardy flowers.—Bessie L. Putnam.

AGENTS

Big Money

Every Other Agents' Offer Beaten to a Frazzle

Mr. Agent: Open your eyes—I have a good thing—a big thing for you. Listen to a whisper—don't make me shout so loud that other agents in your territory can hear what I have to say—and maybe get ahead of you.



N. M. Ruthstein
The Steel Shoe Man

$50 to $100 a Week Certain Selling Steel Shoes

Farmers, miners, smelters, railroad men, creamery workers, hunters, every man who needs strong, long wearing, easy, comfortable, water and mud-proof—warm in winter and cool in summer—shoes, will buy and recommend **"Steel Shoes."**

One pair outwears five pair of any other style shoe ever made, and costs no more than ordinary leather working shoes.

$300,000 for Advertising

I have spent this enormous amount of money in the last five years advertising "Steel Shoes." They are well and favorably known to thousands of men and boys everywhere. This is the largest sum ever spent to help agents make sales and profits.

Live Agents—Hustling Agents —Aggressive Agents

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Decrease in Wild Animals.

During the past fiscal year 4,686 predatory animals were killed by federal officers on the national forests, according to an actual count of carcasses. An indeterminate number of animals, whose bodies were not found, are presumed to have died from poison.

The ranger's bag of beasts of prey this year, as shown by forest service figures, was made up of 206 bears, 3,541 coyotes, 133 mountain lions, 62 lynx, 583 wild cats, 64 wolves and 97 wolf pups. The figures indicate that the national forests are becoming cleared of wild animals that prey upon domestic live stock and game, for the forest ranger fills in odd moments between other jobs by thinning out "undesirable citizens" of the animal world.

Wolves are said to cause greater losses to Western stockmen than any other of the predatory animals. It is estimated that a family of wolves will destroy about $3,000 worth of stock per annum, and that one able-bodied individual costs the grazing industry $600 a season.

The wolves are of two classes—the smaller prairie wolves or coyotes, and the larger grey, black or timber wolves called "lobos." These latter are the great stock destroyers against which the campaign of the rangers has been waged.

The methods of hunting wolves in the West vary. On the plains, wolves are sometimes hunted with dogs and horses, but this way is considered expensive and often dangerous. This sport is described by Roosevelt in his earlier hunting books. On national forests the rangers either set out poison or baited steel traps, or by watching trails and hiding near a wolf's den are able to shoot one or both of the old wolves when they return from foraging. In no other way, according to the forest service, can the number of wolves be kept down so well as by finding their dens and destroying the young.

The skins of the predatory animals killed by the rangers are either kept as souvenirs or sold for a price or for bounty. Wolf skins in the West are said to bring from $4.00 to $6.00 for robes and rugs; a mountain lion skin, $10 to $20; and a bear skin, anywhere from $20 to $150, according to size and species. In addition to this there are bounties on bears, lions and wolves in most of the Western stock states. Wyoming in ten years has paid out over $65,000 in bounties on wolves alone and $95,000 more on coyotes and mountain lions.

Through his activity against these pests, the forest ranger, it is said, has saved the stockmen many thousands of dollars during the year, while the protection to game animals, such as deer, elk and antelope, is of almost equal importance.—United States Department of Agriculture.

Condemned by the Government.

The Standard Flaked Food Company, Owosso, Mich., has been fined $50 for the alleged shipment into Indiana of so-called "Honey Crisps Corn Flakes," which was misbranded, according to a notice of judgment just issued by the Department of Agriculture.

The label on the package described it as "Delicious Honey Crisps, a Toasted Corn Flake Dainty—Guaranteed by the Standard Pure Food Company under the Food and Drugs Act of June 30, 1906, guaranty filed with Secretary of Agriculture under Serial No. 5165."

This label was considered deceptive, and misbranding was charged because it conveyed the idea that the product contained a substantial amount of honey, whereas analysis showed it to contain practically no honey.

FOREST NOTES.

The state of Washington stands first in lumber production, with Louisiana second.

It is said that 90,000,000 broom handles are used annually in the United States—one for each man, woman and child.

The lands burned over during the terrible fires on the Idaho national forests in 1910 are now largely covered with a thick growth of young tree seedlings by natural reseeding.

Manufacturers of artificial limbs are seeking substitutes for English willow, used because of its combined lightness and strength. It is claimed that the Orford cedar of the Pacific Coast will prove equally serviceable.

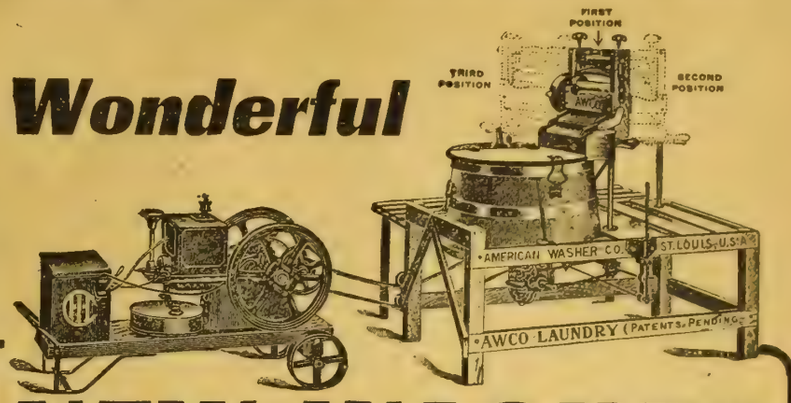
In the open yellow-pine forests of Washington and Oregon a collapsible plow is being used in digging fire lines to stop surface fires. The plow can be dismantled and folded into a compact form, so that it can be packed on horseback, and weighs only forty pounds. When in use, one man with a horse can do the work of twenty or more men working with shovels.

Actual Yield of Potatoes.

The white or Irish potato crop is reported as follows by the United States Department of Agriculture: Condition—69.9 per cent. of a normal on September 1st, compared with 78 per cent. on August 1st; 87.2 per cent. on September 1st last year, and 79.4 per cent., the average condition on September 1st for the last ten years.

The indicated yield per acre, estimated from condition reports, is 88.1 bushels, compared with 113.4 bushels harvested last year, and 96.1 bushels, the average yield harvested 1908-12. On the planted area, 3,685,000 acres, it is estimated the final total production will be about 421,000,000 bushels, compared with 421,000,000 bushels harvested last year, and 293,000,000 bushels harvested in 1911.

Wonderful



NEW WASHER

If you go another day without finding out about the superb new attachment of the Awco Washer you are neglecting a great opportunity. The great new model—the model on which we have been experimenting and testing for two years is now ready. Thousands of people who have known that at last we have the great wonder working washer have been inquiring anxiously for our announcement. ***At last it is here. The final achievement in washing machine manufacturing after twenty years.***

The Awco Whole Laundry In 4 feet Square

Here are some of the great exclusive features of the Awco Washer:

The Klatch-Katch which puts you in instant command of the washer, makes wringer finger pinching impossible, prevents all clogging and won't allow buttons to be torn off.

The new three position wringer attachment which enables the clothes to move from washing machine to basket almost automatically.

The new four foot square outfit on which you have a whole laundry and which may be pushed out of the way into a corner.

Arrangement whereby all lifting and moving of heavy tubs positively done away with.

Find out about these things before you buy another washer. If you want absolutely the latest features in washing machines, here they are. It is marvelous the way this outfit takes the clothes from the washer—puts them into the rinsing water, then takes them from the rinsing water and puts them into the bluing water and then lifts them from the bluing water and into the basket ready for the drying line. You can scarcely believe that such mechanical ingenuity is possible. And it is so simple. ***The touch of the finger works the Klatch-Katch. A mere motion of the hand gives you the three wringer positions.***

FREE Famous Book On Washing and Cleaning Secrets FREE

We, the world's leading manufacturers of washing machines, have issued a book. It is the best book on Washing and Chemical or French Dry Cleaning Methods that has ever been issued. We have actually been offered a check of $10.00 for this book. It contains every secret of cleaning. It also tells you all about the splendid Awco Washer.

Send This Free Coupon

Just put your name and address on the free coupon or send a letter or a postal and the book will be mailed to you absolutely free and postpaid. The book tells you about washing and cleaning everything. It gives you the recipe for the finest cleaning fluid for woolen goods, for mixed goods or cotton goods. It tells you how to remove iron mold, ink stains, grass stains and even scorch stains. It tells you how to take off tar and pitch and every other discoloration. It tells you how to clean velvet goods and furs and how to best wash all of your woolens. You could not buy a better book than this if you tried. Write today and we will send it free. **Remember your name on the coupon or a postal or a letter. Send immediately.**

The Commercial Motor Versus the High Cost of Farm Produce.

"The most interesting feature of this fast approaching era of improved roads and the commercial motor is their certain effect in the cheapening of the cost of farm produce to dwellers in the cities," says C. W. Martin, Manager Motor Truck Tire Department, The Goodyear Tire and Rubber Company, Akron, Ohio.

"The delays and cost of transportation have prevented the farmer living some distance from a distributing point from marketing his produce profitably. With soft roads and horse-drawn wagons, five miles is the average limit beyond which the green goods of a city's supply cannot be drawn. With good roads and mechanical transportation, all the country within thirty miles or more is available for truck gardens. Fruit and vegetables can be profitably produced over a territory many times larger than when hauled by horses.

"An illustration of how firmly mechanical transportation has become established in this country," says Mr. Martin, "is given in the action taken recently by a motor truck club in the West. The club intends to compete with the railroads by operating a fleet of motor trucks. With commercial vehicles it is estimated that better service can be given at a minimum cost.

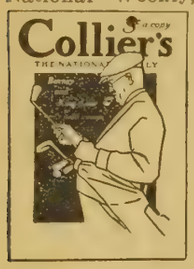
"Let us be thankful that this condition throughout the country is fast approaching. Better roads and commercial motors will within the next few years make a great improvement in conditions, for altogether they will cut down the average cost of hauling farm produce to less than half of what it is to-day."

The Apple Crop.

The estimate of the apple crop is 47.7 per cent. of a normal, compared with 52.2 per cent. on August 1st; 67.9 per cent. on September 1st last year, and 54.4 per cent., the average condition on September 1st for the last ten years.

GRAND COMBINATION OFFER.

Collier's Weekly, The National Farmer and Stock Grower and the Book of Live Stock Champions—All For $2.50, the Price of Collier's Alone.



For the first time Collier's, the National Weekly, is offered in a clubbing combination, and at the same time has been reduced in price from $5.50 to $2.50 a year, at which last-named price we are enabled to offer it and include a year's subscription to our National Farmer and Stock Grower and a copy of the Book of Live Stock Champions. Collier's is a most progressive, illustrated weekly, independent in politics, and in addition to its special articles on topics of vital import in politics, finance and commerce it also has good stories, serial and short, while in every issue are pictures of world happenings that both interest and instruct. Timely editorials, fine illustrations, charming stories—all these you will get in Collier's.

THE NATIONAL FARMER AND STOCK GROWER

Is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

THE BOOK OF LIVE STOCK CHAMPIONS,

Which we also include in this combination offer, is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

AN EXTRAORDINARY OFFER.

Send us $2.50 by postoffice or erxpess money order and you will receive Collier's Weekly for one year, fifty-two issues, The National Farmer and Stock Grower one year, and a copy of the Book of Live Stock Champions, postpaid. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Milo Produces 127 Bushels Per Acre.

Robert F. Alley, Hale Center, Texas, says:

"Through entry as a contestant in the State Industrial Congress, I demonstrated the ability of my farm at Hale Center to produce 127 bushels of milo maize in 1912. This statement is made upon authority of the state organization, a representation of which made the test personally.

"Alfalfa grown on my farm produced six tons per acre, the entire output being sold at the barn for $16 per ton, or $96 per acre.

"My wheat yielded forty bushels per acre, and, like the milo maize and alfalfa, was irrigated.

"I am adding live stock to my farm enterprise, including hogs, thoroughbred cows and horses."

Mr. Alley is in the country that is mentioned in the advertisement entitled "Enrich Yourself" on page 6. The Santa Fe Route is helping farmers to help themselves.

GOVERNMENT MEAT INSPECTION.

What It Amounts To—Big Figures, But a Very Small Percentage of Disease—Number of Slaughter Houses, Etc.

The magnitude of the government meat inspection service is shown by the following figures covering the past seven years, the period during which the present law has been in effect. In this period more than 377,000,000 animals, or 55,857,143 a year, were inspected at slaughter, of which 1,100,000 carcasses and 4,750,000 parts of carcasses were condemned. The re-inspection of meat and meat food products in their various preparations amounted to 44,000,000,000 pounds, of which there were condemned on re-inspection 148,000,000 pounds. There were certified for export 8,000,000,000 pounds.

Federal inspection is maintained at 792 slaughtering and packing establishments, which number includes practically every establishment of importance in the country. These establishments are distributed in 227 towns and cities. The force necessary to conduct inspection is composed of 2,400 veterinary inspectors and assistants.

The quickness and certainty with which the government inspectors stationed in packing houses detect tuberculosis and other diseases in animals and carcasses examined by them at the time of slaughter is an interesting example of developed expertness. Each veterinary inspector is well grounded in the fundamental knowledge of animal diseases, and when entering the service is taken in hand by an experienced inspector for careful instruction in his duties.

In the large packing establishments the post-mortem inspection work is so divided and systematized that each carcass must pass the scrutiny of several inspectors, each of whom gives his entire attention to examining certain particular parts. Under this system the inspector's vision and sense of touch become so highly trained that exceedingly slight variations from the normal in organ or tissue are detected instantly, and the government tag is promptly affixed to all the carcasses which show such variation, and they are set aside for further inspection by a final inspector.

The American Washer Co.

A voluntary word in favor of a St. Louis enterprise is in order. The Awco is a washer designed to lighten the household labor on the farm. It is illustrated on page 23. We recommend that the mechanical ingenuity of this invention be thoroughly investigated. Write to American Washer Company, Dept. 3617, 118 Sidney street, St. Louis, Mo.

Universal Sugar Bowl and Cream Pitcher.

This Elegant Quadruple Silver-Plated Sugar and Cream Set Given as a Premium With The National Farmer and Stock Grower and the Universal Magazine.

One of the Most Popular Premiums We Have Ever Offered.

The illustrations represent in reduced size our SUGAR BOWL AND CREAM PITCHER PREMIUM. They are quadruple silver plate and gold-lined, full size for table use, and will adorn in fit manner any table in the land.

Our Subscription Propositions.

We publish two papers. No. 1 is the monthly NATIONAL FARMER AND STOCK GROWER, the best farm publication in the United States. It furnishes good, instructive reading that will help farmers, stockmen, poultrymen, dairymen, fruit and vegetable growers in any state. The price is 50 cents a year.

Our second publication is the UNIVERSAL MAGAZINE, a bright, little pocket publication of sixty-four pages, two columns to the page. It contains good stories, poetry, fashions, embroideries, illustrations, and is well worth the price, which is 25 cents a year.

Send Us One Good Dollar

And we will send you THE NATIONAL FARMER AND STOCK GROWER for one year; we will also send you the UNIVERSAL MAGAZINE for one year; and we will send you the SUGAR BOWL AND CREAM PITCHER SET by parcels post, safe delivery in good order and satisfaction guaranteed. Sign your name and postoffice address against the advertisement and enclose the dollar with it, and we will do the rest. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Nursery Proposition.

On page 12 will be found a proposition by the H. J. Weber Nursery Company at Nursery, St. Louis county, Mo. This nursery was established in the year 1867, and is one of the best known in the trade. They grow fruit and ornamental trees, evergreens, shrubs, wholesale and retail. Our readers who deal with this firm will find Messrs. Weber will fill orders exactly and give perfect saisfaction.

How to Harvest Seed Corn.

Professor P. G. Holden is with the International Harvester Company, doing as much good for farmers and probably more than when he was at the Agricultural College. He has just issued a pamphlet that begins the reading matter with a quotation from his own book, as follows:

"If I owned the farms in the states of the corn belt to-day, my first instruction would be: Harvest the seed for next year's corn crop four or five days before the average time for the first killing frost in your vicinity and hang it in a dry place with good circulation of air."

The pamphlet referred to shows by words and by pictures the full details of harvesting seed corn. It is practical and full of interest. A postal card addressed to the Agricultural Extension Department, International Harvester Company, Chicago, Ill., will get a free copy if you ask for it.

Heavy Native Cattle.

On October 1st G. W. Edwards, of Macoupin county, Illinois, contributed a very nice load of heavy-weight steers to the market that sold at a price next to the top. His string consisted of eighteen head that averaged 1,413 pounds, and sold for $9.00 per 100 pounds. The cattle were fed on ensilage and corn and made very good gains. Mr. Edwards believes in the feeding of ensilage and highly recommends it.

Three Indian Dolls For 30c

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry— a splendid publication.

Send us thirty (30) cents for one-year's subscription to the Universal Magazine and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis. Mo.**

Willys-Overland Autos.

Do not forget to read and study carefully the points of superiority set forth on page 32 of the Willys-Overland cars. Superior quality and the lowest cost consistent with it.

Endurance Test With Horses.

Only nine horses took part in the endurance test promoted by the Morgan Horse Club, in connection with the Vermont State Fair. Each horse carried 160 pounds or more, and the ride was from Northfield, Vt., to White River Junction, a distance of 149 miles, the horses being judged for condition on arrival. General A. L. Mills, of the United States Army, awarded the prize to Halcyon, a three-quarter-bred Arab mare owned by Colonel Spencer Borden, of Fall River, Mass. She covered the distance in thirty hours and thirty-nine minutes.

Elegance and Economy.

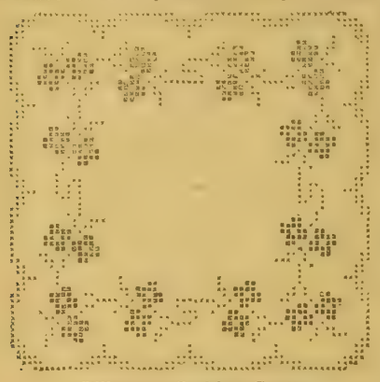
All our readers should send for the Fall Style Book issued by the National Cloak and Suit Company, advertised on page 3. By so doing you will insure elegance with economy. Sign and send in the coupon.

Tobacco Growers at Work.

"On account of the cold weather, growers in different sections of the state worked all of last Sunday cutting their tobacco. They paid from $2.00 to $3.00 per day for help, but could not secure all needed, even at that figure."—Farmers' Home Journal, Louisville, Ky.

MAY MANTON EMBROIDERY.

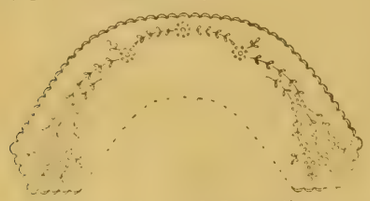
These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.



Pillow or Cushion Cover.

No. 754 is a design for embroidering a pillow or cushion cover sixteen inches square in cross-stitch style.

In the pattern all the stitches are shown as simple crosses, but in the illustration some are lighter, some heavier. The lighter stitches represent the border and the leaves. The heavier crosses represent flowers. As the leaves and flowers are conventionalized, any preferred colors may be used.



Fancy Collar and Instructions.

No. 759.—Design for embroidering a fancy collar. Especially adapted to May Manton's Pattern No. 7980.

The scalloped edges are to be padded and buttonholed. The flowers, leaves and dots can be worked solidly or as eyelets. The stems are to be outlined.

To pad continuous scallops rapidly and effectively, work chain stitch between the lines, heavier at the center and lighter at the points; or apply two or more strands of embroidery cotton over the design between the lines, tack here and there in couching style and draw closely together at the points. Buttonhole closely over the foundation.

Make solid embroidery by first darning backward and forward over the stamped figure and then cover closely with over and over stitches, worked in the opposite direction from the padding. To outline, take short stitches, keep the needle toward the right and work upward. To make the dots as eyelets, first encircle by running a thread around the outline, pierce with a stiletto and work over and over. To make the flowers and leaves as eyelets, first run a thread around the stamped figure, then cut a slight slit lengthwise, and then crosswise of the long openings, push back the material on the wrong side and work closely over and over.

Use embroidery cotton in weight adapted to the material.

Attractive Square.

No. 758.—A design for embroidering an eight-inch square. Four transfers are given.

The embroidery may all be done in outline stitch or the flowers, leaves and calyxes may be worked in long and short stitch with the stems and veins outlined.

To outline, take short stitches, keeping the needle toward the right and work upward.

When making the long and short stitch, take irregular stitches close together, working slantwise from the center toward the outer edges of the pattern; no padding is required.

Use wash embroidery silks or mercerized floss in any one color throughout or in the natural colors of the flowers and leaves.

Wallachian Embroidery.

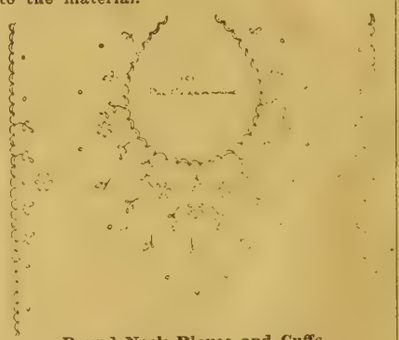
No. 755.—A design for embroidering drawers with curved edges. Transfer patterns for two legs, including 1⅛ yards of scallops for each, are given. The scalloped edges are to be padded and buttonholed. Lace is designed to be applied between the dotted lines and the flowers are to be embroidered over it. The flowers are to be worked in Wallachian stitch with the centers as eyelets or to be outlined in over and over stitch. The leaves can be worked as eyelets or solidly and the stems are to be outlined.

To make continuous scallops, work chain stitch between the lines, heavier at the centers and lighter at the points, or apply two or more strands over the center, tacking here and there in couching style. Buttonhole closely over the foundation.

Wallachian embroidery is made of buttonhole stitches, starting from the central line of the stamped figure. Buttonhole toward the outer edge of each petal, carefully following the curves of the design. When outlining the stems, take short stitches, keeping the needle toward the right and work upward.

To make the flowers and leaves of solid embroidery, pad the stamped figures by darning backward and forward lengthwise and then cover closely with over and over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the leaves as eyelets, first run a thread around the stamped figures, then cut a slight slit lengthwise, then crosswise, push back the material and work closely over and over.

Use embroidery cotton in number adapted to the material.



Round Neck Blouse and Cuffs.

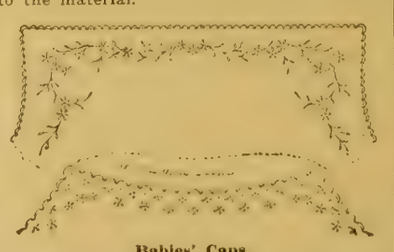
No. 757.—Design for embroidering a round-neck blouse or chemisette and sleeve edges.

The scalloped edges are to be padded and buttonholed. The flowers, leaves and dots can be worked solidly or as eyelets. The stems are to be outlined.

To pad continuous scallops rapidly and effectively, work chain stitch between the lines, heavier at the center and lighter at the points; or apply two or more strands of embroidery cotton over the design between lines, tack here and there in couching style and draw closely together at the points. Buttonhole closely over the foundation.

Make solid embroidery by first darning backward and forward over the stamped figure and then cover closely with over and over stitches, worked in the opposite direction from the padding. To outline, take short stitches, keep the needle toward the right and work upward. To make the dots as eyelets, first encircle by running a thread around the outline, pierce with a stiletto and work over and over. To make the flowers and leaves as eyelets, first run a thread round the stamped figure, then cut a slight slit lengthwise, and then crosswise of the long openings, push back the material on the wrong side and work closely over and over.

Use embroidery cotton in weight adapted to the material.



Babies' Caps.

No. 756.—Designs for embroidering babies' caps, one plain, one with a revers.

The scalloped edges are designed to be padded and buttonholed. The edges, daisies and dots to be worked as eyelets or solidly with the stems outlined; or the flower sprays may be worked in a combination of solid work and eyelets.

To pad the scallops, work chain stitch between the lines, heavier at the centers and lighter at the points; or cut a skein of thread, apply two or more strands over the design, keeping within the lines, tack here and there in couching style and draw the threads together at the points of the scallops. Buttonhole closely over the foundation.

To make the daisies as eyelets, run a thread round each outline. Cut a slit lengthwise, then crosswise. To make the dots as eyelets, run a thread round the outline, then pierce with a stiletto. Push the material back on the wrong side and work closely over and over.

To outline, take short stitches, keeping the needle toward the right and work upward.

To make the daisies and dots solidly, pad by darning backward and forward between the lines and cover closely with over and over stitches worked in the opposite direction from the padding.

Use embroidery cotton or silk in weight adapted to the material.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Fall House Cleaning.

There are many bits of knowledge that help to make housework easier and more quickly performed, and the housewife is usually anxious for such information, and it is not every housekeeper that knows the value of gasoline at house-cleaning time, but it must never be used in a room where there is a fire. Curtains, windows, shades and woodwork can all be cleaned with the fluid, and all upholstery may be cleaned and restored to its original color by a thorough soaking in gasoline and careful rubbing with soft white cloths, and the most delicate enamel will not be injured by a liberal rubbing.

To clean window glass, first wipe off with a soft cloth to remove all dust, then dampen the cloth with the gasoline, rub over the glass, then polish with soft, dry cloths.

Wheat bran placed in coarse flannel bags is excellent for cleaning dust and soil from delicate wall paper, and the best way to clean white paint is to dip a piece of soft flannel into warm water, wring out and dip in clean bran, using this to rub the paint.

Dust all frames of chairs, first with a damp cloth, then with a dry one, and lastly with a very soft cloth, to put on the polish.

To clean all brass articles and brass on furniture, dampen a cloth with ammonia, rub it briskly over a piece of pumice stone and then over the brass, then polish with a piece of flannel, and the brass will shine like new.

The autumn is a good time to hang paper, for we then have something fresh and new to feast our eyes on during the six months which are usually spent indoors, and it is not a difficult feat in these days when one can buy ready-mixed paints to give all the woodwork a new coating of paint, and it adds a world of freshness to the appearance of the room. An excellent soap solution for washing very soiled woodwork, carpets and curtains is made by dissolving a bar of good soap in a pint of boiling water, and then stirring in a tablespoonful of powdered borax, then set this aside to cool, and stir enough of this soap solution in the water to make a strong lather.

Put the curtains to soak over night in plenty of water to which a cup of coal oil has been added, then rinse them out in the morning and put them to soak for an hour or two in warm suds with the borax and soap solution added before rubbing them out, and a light squeezing between the hands will bring them out beautifully white and clean unless they were very soiled before washing, and in that case they need to be boiled in suds made with this soap. The finest lace and muslin can be washed through this suds without any injury to be fabric, as the borax in the solution softens the water, and there is nothing better than this solution for washing white counterpanes, cotton blankets and all bed covers that have been used during the summer and need a thorough cleaning.—Martha.

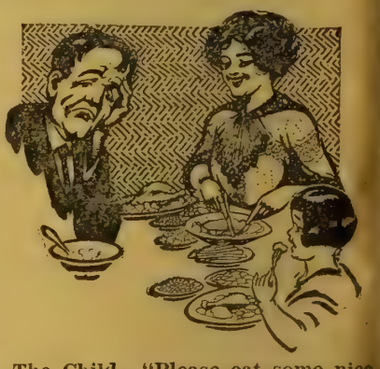
Sleet, snow and hail in the Panhandle of Texas in the month of September indicate the beginning of a long winter, no matter whether it be mild or severe.

What Is Home Without an Appetite?

Many a Miserable Dyspeptic Can Quickly Enjoy a Good Appetite Using Stuart's Dyspepsia Tablets.

There is nothing so deplorable as a home where at every meal one member of the family sits in silence eating a special diet while others are partaking of the regular food.

Not only does this condition become almost unbearable to the dyspeptic, but it throws anything but a joyous spirit over the rest of the family.



The Child—"Please eat some nice chicken, papa."

The Father—"No, Buster, daddy don't feel like eating."

The presence of dishes before him that a stomach sufferer cannot eat, makes him sick at his stomach and he is actually doing himself an injury when he eats at such a table.

A Stuart's Dyspepsia Tablet taken after each meal will excite appetite and in a short time one will find the sight of food becoming less and less repugnant until after a few meals one will take courage enough to join with the family in the regular fare.

As soon as this is done and there follows no evil effects then by continuing the use of Stuart's Dyspepsia Tablets you will soon be restored to your normal healthy and vigorous appetite.

One of the real pleasures of eating is the joy of smelling and seeing food. These qualities are essential to the normal digestion for they excite the flow of saliva in the mouth, and the gastric juices in the stomach, and thus make ready the digestive apparatus for the food when it is eaten.

Stuart's Dyspepsia Tablets contain ingredients that every system needs. Weakened fluids of nature used in digestion are quickly restored to their normal proportion, and in a short time are so evenly balanced that the system can manufacture its own pepsin and hydrochloric acid as it should.

Go to your druggist today and buy a box of Stuart's Dyspepsia Tablets. Price, 50 cents.

SALT AND PEPPER SHAKERS.

The Best Subscription Premium Ever Offered With the Universal Magazine.

The UNIVERSAL MAGAZINE ought to be known by everybody for the reason that it is a nice, bright, cheerful, illustrated monthly magazine of sixty-four pages, two columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication.

Send in your orders to

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Pickles and Relishes.

To one gallon of vinegar add one teacupful of salt, one cupful of sugar, one cupful of ground mustard, mixing all thoroughly together Wash cucumbers as they are gathered and drop them into the mixture. They will keep nicely without heating the vinegar and are much better in flavor than when first packed in brine; besides, the labor of freshening is eliminated. After the crock is filled, cover with horseradish or grape leaves, adding a few pieces of horseradish root to insure the keeping quality. If preferred, pieces of cinnamon bark may also be added.

Tomato Pickles.—The old-fashioned way of putting up tomato pickles is still a favorite in many homes. The secret of success is in selecting perfect fruit, without a crack or blemish, and packing carefully in good cider vinegar, weakening as for table use. Pack a layer of tomatoes and then a layer of grape or horseradish leaves, finishing with a layer of the leaves. Keep in a cool place.

Pepper Mangoes.—Pick the peppers after they have attained their full size but before they have turned red, using only the large, sweet peppers. Soak in salt water over night or even for twenty-four hours to remove a portion of the pungency. Then with a sharp knife carefully cut out the stem of each and remove the seeds. Stuff with chopped cabbage or a mixture of cabbage, green tomatoes, celery and onions, chopped fine, return the portion of the stem cut out and tie in place with a cord. When all are stuffed, cover with vinegar and keep in a cool place, the mangoes being held under the vinegar by weighting down with a plate or piece of board.

Chow-Chow.—Chop a peck of green tomatoes, sprinkle a little salt over them and let drain in a colander over night. In the morning add an equal quantity of chopped cabbage, two or three peppers, removing the seeds, four onions and two heads of celery. Heat enough cider vinegar to cover the mixture, add a tablespoonful of white mustard seed, a tablespoonful of ground mustard and a teaspoonful of whole cloves. Put the mixed vegetables into the boiling vinegar and fill at once into sterilized cans, place in the top of each a piece of horseradish root and seal at once. The product is much more crisp and fresh than when cooked by the usual method.

Cold Catsup.—This is easily made, the laborious straining process being avoided, and it is a splendid keeper, surprising as this may seem until the recipe is tested. One and one-half pints best cider vinegar; stir in one-half teacupful salt, one teacupful brown sugar, one-half teacupful mustard seed, one ounce celery seed, one teacupful each of ground cloves and mace, two teaspoonfuls ground cinnamon, two teaspoonfuls ground pepper, two or three onions cut in slices and each divided four or five times, three small, long peppers, four large green peppers cut into small pieces and with seeds removed, two large roots grated horseradish. Mix well, then take one-half peck ripe tomatoes freshly gathered. Peel by dipping in hot water, cut across the middle and remove seeds and juice, retaining only the firm flesh. Cut in good-sized pieces into the prepared vinegar. This will keep all winter without sealing if in a cool place.

Cucumber Relish.—Slice fine, as for table use, four cucumbers and sprinkle with salt. Let stand three hours or over night. Then add three onions chopped or sliced fine, three pints vinegar, one-half pound brown sugar. Cook until tender. Mix one tablespoonful ground mustard, one tablespoonful mustard seed, one teaspoonful flour, one teaspoonful celery seed together, and stir in when the mixture reaches the boiling point one-half teaspoonful turmeric or a handful of nasturtium seeds may be added if liked. Seal in glass jars.

Corn Salad.—Twelve ears corn, one head cabbage. Chop and sprinkle with salt. While chopping these vegetables, have heating three cups brown sugar, three tablespoonfuls mustard, three tablespoonfuls flour, one-half teaspoonful cayenne pepper, one and one-half quarts vinegar, one teaspoonful turmeric. Cook until the corn is tender; can and seal.

Canned Tomatoes.—Until recently the majority of people thought that tin cans were an essential to tomato canning in the home. But every year these are being laid aside for glass, experience proving that the latter is just as reliable, more economical in the end. While the first cost of the tin cans is a little less, they cannot be used with safety more than two years, often only one year, for if the tin is rusted in a single spot their use means danger from poisoning. The contents must be removed from the can as soon as it is opened. And even with all precautions, the most careful housewives use the articles sealed in tin with just a bit of misgiving.

With ordinary care, canning tomatoes in glass is as easily done as ordinary fruit, and the cans are never unfitted for future use through contact with the acid. Select perfectly sound fruit. It has been stated, and with more than a little truth, that a diseased spot in a tomato renders the entire fruit diseased. Certain it is that imperfections in it spread with great rapidity. Avoid overripe fruit. Use new rubbers, perfectly fitting covers and thoroughly sterilized cans. Brighten up the caps with ashes or some good scouring powder. Not only will they look better, but if there is a defect in the metal it will be discovered.

We prefer to peel as you would an apple, instead of scalding, to remove the skins. Slice and cook in enough water to prevent scorching. Cook until thoroughly scalded through, add salt to taste and can and seal. If the precautions above indicated are taken and the tomatoes kept in a cool place, there is seldom more trouble in getting them to keep than with the average fruit.—Bessie L. Putnam.

One Was Enough.

Robert Bridges, the new poet laureate, is a fastidious critic and hence sees little to admire in the commonplace verse of Alfred Noyes.

Noyes once brought to Mr. Bridges two very long odes that he proposed to submit to the English Review.

"I'll read them aloud," the young man said, "and afterwards you will tell me which is in your opinion the more likely to be accepted by the English Review.

Poor Mr. Bridges sighed and settled himself in his chair, and Noyes, in his loud, harsh voice, read the first ode. It was very long, and at its conclusion Mr. Bridges leaped to his feet and said, briskly:

"Now, my young friend, I can advise you. Send the other ode to the Review."

Top Prices For Sheep and Lambs.

The top of the market is shown by the sale of 67-pound lambs at $7.15 per 100 pounds, and 108-pound mutton sheep at $4.25 per 100 pounds, at the St. Louis National Stock Yards, September 25th.

HOUSEHOLD HELPS, HINTS AND RECEIPTS.

The Best Book For the Practical Woman and Home Ever Published.

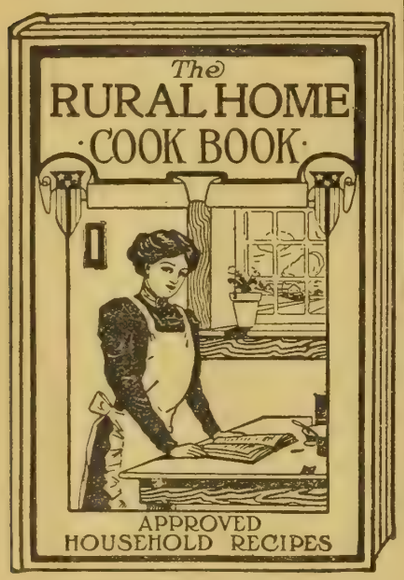
RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.



Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address postpaid safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hints For Home Practice.

There are many excellent remedies that may be easily prepared by the housekeepr and which will afford relief, and if used in time will effect a cure without the necessity of calling the doctor.

Save all the pieces of old, soft linen and flannel, as the linen will be needed sooner or later for the sundry small accidents that every family is heir to.

A roll of old flannel is a perfect treasure during the season, when colds, sore throat, rheumatism and neuralgia are prevalent, and have another roll of soft, thin cloth to be used for mustard and other kinds of plasters and poultices.

For a chronic sore, bathe three times daily with weak suds made of the best castile soap and ten drops of carbolic acid in a basin of warm water, and afterwards apply vaseline or any good healing salve.

One of the best remedies for bed sores is made with the white of an egg and lard. Beat enough lard into the egg to form a salve, then put some on a soft, white cloth and apply right to the sore.

One good way to cure backache is to take one-half teaspoonful of sulphur in a glass of milk for nine mornings without missing a day.

If you are troubled with asthma, try this pleasant remedy: Gather a lot of peach leaves, dry them and keep in a closely-covered glass jar. Boil enough of the leaves to make a strong tea, then strain and add this to one quart of good molasses and cook to a candy. Pull and cut into small pieces and take a piece five times a day. One who has tried it says she has derived great benefit from using this remedy.

If you want a good and safe face powder, buy some of the best prepared chalk, break it up fine and put in an earthen dish, then pour enough rain water over it to cover it well and let stand until the next morning, then pour this water off and pour fresh water on and repeat this for four or five mornings, and when the last water is poured off, place in the sun to dry out thoroughly. When perfectly dry, break into fine powder and mix well with this powder one part of boric powder to two parts of the chalk and add a little perfume, and you will have one of the best face powders, and especially good to use if there are any facial eruptions, as the boric powder tends to heal and soothe any skin irritation. A small cut or wound will heal very quickly if covered at once with the dry boric powder and bound up closely, as this powder is healing because it is antiseptic, and by keeping an injured spot of flesh healthy permits it to heal.

I believe a cold should be taken in hand as soon as it begins to appear, and that many a severe illness may thus be avoided, and by using boric powder as a snuff two or three times a day at the very first symptoms of the cold it can often be arrested; and it is a good plan to rub a mixture of kerosene and lard on the bridge of the nose and between the eyes just before retiring at night.—M. A. T.

HAY MARKET AT ST. LOUIS.

Being a Statement of Actual Sales Made on the Last Day of September, Sales Covering All Grades.

On the Other Shore.

"In the Father's house are many mansions," the pastor was saying to the divorced lady, who was quite ill.

"Yes, I know," she whispered, "and I was wondering if John would live in one and I in another over there."—Judge.

Meanness.

Jones—"The widow of that commuter killed in the wreck has been awarded $50,000 damages."

His Wife—"And I've been trying to have you move to the suburbs for months, you mean thing!"—University of Pennsylvania Punch Bowl.

Putting it Mildly.

Tom—"Did you say your friend is slender?"

Tab—"Well, she returned a silhouette gown because she couldn't make a shadow in it."—Judge.

Plenty of It.

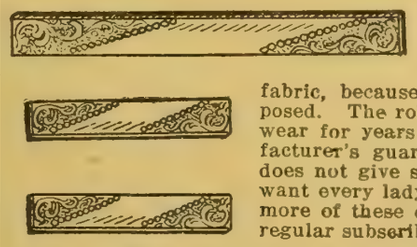
"Have you hot water in your house?"

"Have I? My dear boy, I'm never out of it."—Baltimore American.

Rolled Gold Plate Waist Pins

Given as a Free Premium With the Charming Monthly Publication, the UNIVERSAL MAGAZINE.

This beautiful Pin Set, as illustrated, consists of a large Pin (2¼ inches long) and two smaller Collar or Cuff Pins. They are unbreakable, the back being formed of one piece, the rolled gold plate front then being rolled on, making the entire Pin practically one piece. They will not catch in the hair or fabric, because no sharp points or edges are exposed. The rolled gold plate front is warranted to wear for years without tarnishing, and the manufacturer's guarantee is with every Pin, and if it does not give satisfaction it will be replaced. We want every lady reader of this offer to have one or more of these dainty Waist Pins, also to become a regular subscriber to our



UNIVERSAL MAGAZINE.

Go Pimples—Come Beauty

This Is What Happens When Stuart's Calcium Wafers Are Used to Cleanse the Blood of All Impurities and the Skin of Eruptions.

If you want a beautiful complexion stop using cosmetics, salves, lotions, etc. They simply plaster the pores and prevent them from doing their natural and normal duties. If you stopped up all the pores you would actually die in a few days.

"Not a Pimple or Other Skin Eruption Left—I Used Stuart's Calcium Wafers."

There is no sense in being longer humiliated by having to appear in public with a pimple-covered, blotched face—a face that makes strangers ashamed. Stuart's Calcium Wafers will drive all blemishes away and make your face a welcome instead of an unwelcome sight. You'll no longer be a slave to pimples, acne, blackheads, liver spots, boils, eczema, tetter or any skin eruption.

Nowadays, when you see a real beauty, the chances are Stuart's Calcium Wafers wrought that wonderful change. It takes only a short time, even with very bad complexions—the kind that are disfigured with rash, eczema, boils, blotches and liver spots.

Stuart's Calcium Wafers cause the skin pores to breathe out impurities. The lungs burn up a great amount, but Nature imposes upon the skin the larger burden. Every tick of the clock means work, work, work for these wonderful Wafers. And every instant new skin is forming, impurities become less and less, the pores are reinvigorated, and soon such a thing as a pimple, blackhead or any other eruption is impossible. You marvel at the change.

The soft, rosy tint love-taps the cheeks; the neck, shoulders and arms show the health of youthful skin—in fact, you just can't help having a beautiful complexion if you use Stuart's Calcium Wafers.

They are put up in convenient form to carry wth you, are very palatable, and are sold by druggists everywhere at 50 cents a box.

How a Mother Trained Her Daughters.

Laura Dean as a bride found herself woefully ignorant of the essential principles of housekeeping. At home she had occasionally taken it upon herself to make a fluffy dessert or a new kind of candy that had won her many compliments. She had complacently prepared for her marriage, feeling well equipped for the step she was about to take, and that David was indeed a fortunate man.

But David was only starting in life, and before Laura had been married three months she realized that a knowledge of fluffy desserts and delicious candies are poor equipments upon which to run a home.

"But I'll clip the wings of the little god so he can't fly out the window by settling right down and learning this business from the bottom up. If only mother hadn't thought that she could do everything better than anyone else! Well, if I ever I have children—!"

Laura did have children—two girls three years apart. When Edna was four years old Laura assigned her a daily task for which she was held responsible. A big tree overshadowing the porch kept it strewn with leaves and twigs. Mrs. Dean provided her little daughter with a small broom and required of her that twice a day she brush off the porch and carry the leaves and twigs in a small basket provided for that purpose to the back of the barn. At first Edna was proud of the responsibility, but when the novelty wore off she was inclined to shirk the work until Mrs. Dean explained to her that by doing this task she was helping mother and making her day easier. From the very beginning Mrs. Dean found that the strongest appeal she could make to her children was to tell them they were real helps to mother. She had not forgotten that oft-repeated remark of her own mother: "It's more bother than it's worth to have children do things. I'd rather do the work myself."

Gradually other tasks were assigned to Edna, so that by the time she was seven and little Helen four, Edna was giving about two hours a day to her mother. She now washed the breakfast and luncheon dishes and made her own bed, while little Helen took up those easier tasks with which Edna had begun. The children were never allowed to work in a careless or haphazard way nor to do tasks beyond their strength. Mrs. Dean taught them the right way to do things. She was patient with their failures, but made them persevere until they succeeded. She never insisted, however, that her way was the only way. As the children grew older they often found ways of doing things which came handier to them than their mother's way, and so long as the results were as good, Mrs. Dean made no objection. She far preferred original children to mere imitators.

The children did not start to school until they were eight years old, but Mrs. Dean taught them a little each day at home. When they did start they were not behind the children of their age, and in a few years were ahead of many of them.

When Edna was ten she began to cook. She learned to cook well one thing before she tried another dish. The first thing she learned was to make coffee. She soon knew how to prepare several practical dishes, and on necessary occasions could prepare a simple meal without help.

During school days household tasks had to be regulated to school hours. Mrs. Dean always insisted upon a generous amount of playtime for her girls, and the more when they were going to school. Saturday morning was a busy time. The children helped with the baking, cleaned the pantry and kitchen floor, washed up enough potatoes and other vegetables to last through the week and picked over raisins and currants to be used during school days.

Then there was the marketing and household buying. For several years Mrs. Dean took the girls with her on her trips to market and store. She explained the names of the different cuts of meat and their comparative food values. She did the same thing in the wares of the grocery and dry goods stores. After a while she began to refer matters to their judgment. When she saw that the girls really understood buying she often allowed them to go to the stores without her and would commend or condemn their purchases, as the case might require. But so thoroughly did the girls profit by her training that it was seldom adverse criticism was needed.

Both girls were passionately fond of dolls, and for this Mrs. Dean was thankful. She ordered paper patterns and had the children cut out and make their dolls clothes from these patterns. Thus they became familiar with the use of paper patterns and they also learned to stitch daintily. When Edna was fifteen she made herself a dress that no experienced dressmaker would have been ashamed to call her handiwork.

Mrs. Dean also used the dolls to teach the girls the care of children. The dolls went through all the stages of babyhood and little girlhood and had every known disease. They were properly nursed through everything and lived to grow up into beautiful young lady dolls. Of course, as young lady dolls they must assume social responsibilities, and through them Mrs. Dean taught her girls many of the social observances.

The Deans could not afford a finishing school for their girls, but there was no need of it. They grew up learning how to do things right from the sweeping of porches to presiding at a dinner. Edna is now eighteen and Helen fifteen. They are almost as capable of running the house as is their mother, and they do it on any occasion when she wishes to be away for a day or a month.

Her friends envy Mrs. Dean her good times and her capable daughters, but Mrs. Dean knows that she has now only the reward for so patiently and lovingly training awkward, wee hands and restless young minds for the life work which should be understood by every young woman before she takes it upon herself to assume the responsibility of a home of her own.—Janet Thomas Van Osdel.

Corn From Argentine.

What is said to be the largest shipment of corn received from South America for more than two years arrived in New York Wednesday, September 24th, when a steamship put in with a cargo of 7,300 tons of shelled corn from Buenos Ayres. This shipment marked the beginning of a large importation arranged by several produce dealers in this country, it is said.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Hay Crop of 1913.

A preliminary estimate of the total production of hay during the present year places it at 63,000,000 tons, compared with 73,000,000 tons harvested last year, and 55,000,000 tons harvested in 1911.

The quality of the hay crop is estimated at 91.7 per cent., compared with 92.1 per cent. last year, and 92.1 per cent., the average for the last ten years.

MAGNETIC SHIELDS fill the system with **MAGNETIC FORCE**, which does what all the medicine on earth cannot do. It gives life, energy and tone to the blood and nerves, **MAKING THE BLOOD CIRCULATE VIGOROUSLY**, overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases, but in multitudes of cases, where people say they have been cured of Paralysis, Rheumatism, Lung Trouble, Kidney, Liver, Stomach and Bowel Troubles, Nervousness and most every other form of disease after medicine failed.

Our **MAGNETIC ABDOMINAL AND KIDNEY VITALIZER** for ladies and gentlemen, here illustrated, is only one of the many shields we make. **IT IS A WONDERFUL INVENTION**, scientifically constructed, and floods the system with magnetism, supplying **LIFE, STRENGTH** and **VIGOR**, to the **BACK, KIDNEYS, STOMACH, LIVER, BOWELS** and **BLADDER**, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply. Your health depends upon a good circulation.

Fill Your System With This Magnetism

Write today for full information and free book, **"PLAIN ROAD TO HEALTH,"** by C. I. Thacher, M. D. Describe your case fully, we advise you free how to apply **MAGNETISM** for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 515, 110 South Wabash Avenue, Chicago, Ill.

THE OLD FARM SPRING.

Nothing comes out of the past to me
So beautiful, bright and clean,
As the spring beneath the chestnut tree,
With the ferns that grew so green.
The old farm spring is a lovely place,
And the water that trickles through
Is sweet and cold as an April cup
That the woodland fairies brew.

It has flowed so long in its quiet nook,
Sequestered and far and sweet,
With its fine old place to sit with a book
Away from the burning heat;
And so many faces have shimmered there
As they leaned o'er the pool to lave
The burning lips of their daily care
In the old spring's crystal wave.

The cattle have drunk from the overflow,
And the mossy trough has made
A drinking place for horses, low
'Neath the bending willow's shade.
It frosts the glass when you dip one in,
And it tastes so pure and fine—
The old farm spring where you first begin
To know of the world's real wine.

I never forget it, that quiet spot
Under the chestnut tree,
Where I go in dreams when the days are hot,
And wish all men could be.
The old farm spring that has flowed so long
The oldest inhabitant smiles
When he thinks of its age—and a redwing's song
Comes floating across the miles.
—Baltimore Sun.

ARLINGTON CEMETERY.

That silent spot, alas, may weep
Beyond Potomac's wave,
For there a nation's heroes sleep,
The loyal and the brave—

There, undisturbed, in calm repose,
Their pains and passions done,
Their battles fought, their triumphs closed,
Their final victory won.

No clouds of smoke to dim the eye,
No roar of shot or shell,
No onward march, no battlecry,
On plains where thousands fell.

No warlike blast or roll of drum,
No lonely watch to tread.
Ah, generations yet to come
Shall praise the fallen dead!

Year after year, how grand the scene,
By loyal hands that're true,
The graves are strewn with garlands green
Of those who wore the blue.

The thunderstorms of heaven may rave,
But under God's control,
Serene and calm will rest the brave
While endless ages roll.

Sleep on, then, fallen comrades, sleep!
Your dreams of war are fled.
The land you saved will sacred keep
The city of her dead.
—Philadelphia Record.

THE LITTLE HOUSE.

The little house is modest, and 'tis hidden by the branches
Of the sheltering trees that hover o'er its roof so old and brown,
And the sunshine streams upon it in a golden flood of glory,
Like a flicker of God's eyelit, sending benediction down.

The flowers grow about it, fragrant violets and roses,
And the sparrows chirp and twitter, making music in the eaves,
The morning glories clamber all around its doors and porches,
And the honeysuckle 'round the gate fragrant garland weaves.

In its prim, old-fashioned garden, dear old-fashioned blooms run riot,
There the hollyhocks stand stiffly and sedately in a row,
There the pink and the sweetwilliam, and the larkspur and the lilac,
Shed their spicy odors on the air when summer winds are low.

When our feet are worn with walking on the rocky roads of travel,
Thro' the City of Confusion, down the Vales of Toil and Care,
When our only prayer is for that peace the world can never give us,
Oh, our bruised hearts, and stricken, will be sure to find it there.

When at last we reach the pathway that leads upwards to its threshhold,
When we gain its sacred portal by a long and weary route,
We will find the gate wide open to give welcome to the wanderer,
And the door is ever ready with the latchstring hanging out.

We may linger in the mazes of the City of Confusion,
Thro' the "palaces of pleasure" we may long have wished to roam,
But our steps will soon turn backward to the brown and gnarled roof tree
Where love's beacon light is shining—for the little house is home.
—New Orleans Picayune.

OH, TO BE AT HOME!

Oh! to be at home in the end, in the end,
Oh! to be at home when the long day dies;
Oh! to be at home where the green roads bend
Around the path that runs to the rainbow skies,
Travel and adventure, and to see the sights,
A little bit and over, and the road once more
Down to dusks of dreaming in the clear, sweet nights,
Oh! to be at home in the vineclad door.
Oh! to be at home when the storm is raging deep,
Oh! to be at home in the quiet peace of things;
Home, the golden haven where the clean heart sleeps
So soft beneath the music that a loved lip sings.
—Foster McKinsey, in Baltimore Sun.

THE HORSE TO HIS MASTER.

I am a Horse;
You are a Man;
I've been your slave
Since I began,
And though I'm strong
Enough to shake
My shackles off
And make a break
For freedom that
Would lift the lid,
You've noticed
That I never did.
By day and night
I've worked for you,
And did the best
That I could do;
And though I may not
Always like
Your methods, yet
I never strike;
In heat and cold,
In wet and dry,
I'm always ready—
Glad to try
To do the very
Most I can
To satisfy
My master, man.
Therefore, my master,
If you please,
Considering
Such facts as these,
Say, don't you think
It ought to be
Your pleasure
To look out for me,
If for no other
Reason than
My greater usefulness
To man?
Of course, you might be worse,
I know
You sometimes treat your own kind so.
But I'm a Horse,
The man-slave to his master, Man,
And, furthermore,
My nature is
Much more dependent
Than is his,
And as I trust you, sir,
You should
Do all you can to make it good.
Nor do I ask a lot, I guess,
To be a fairly fair success—
Good food, good shelter, and good care,
I think, is just about my share.
No other pay I ask—
No touch
I make, but this;
Is that too much?
—W. J. Lampton.

The Baron's Love.

Oscar Hammerstein, as he watched from Madison avenue the building of his new opera house in New York, said to a reporter, apropos of the suit brought against him by the Metropolitan Opera Company:

"The Metropolitan directors love art."

Mr. Hammerstein smiled and lifted back his top hat.

"They love art profoundly," he said. "Their love reminds one of the Baron de Conte.

"The Baron de Conte had just got engaged to Lotta, old Gobsa Golde's daughter, the rich heiress.

"'Alphonse, do you love me?' Lotta asked one evening.

"'Indeed, I do!' the Baron answered.

"How much do you love me, Alphonse?' the heiress dreamily pursued.

"'I love you,' said the Baron, 'for all you are worth.'"

The Cow and the Calf.

He was one of those fresh young fellows, given to the use of bromidisms and stale slang. At the breakfast table, desiring the milk, he exclaimed: "Chase the cow down this way, please."

"Here, Jane," said the landlady, "take the cow down to where the calf is bawling."—Boston Transcript.

FOUR BEAUTIFUL FERNS

To be Obtained as Subscription Premium in Connection With either Our NATIONAL FARMER AND STOCK GROWER, a Splendid Monthly Farm Paper, or With Our Monthly UNIVERSAL MAGAZINE, a Gem of a Story and Literary Publication.

NOW IS THE ACCEPTED TIME.

We wish to deliver WITHOUT COST to your door in good, healthy growing condition a valuable assortment of beautiful ferns. We have secured them from fern growers who boast of the fact that their plants are entirely free from all injurious insects or disease which destroy foliage plants of this type, and are assured each individual plant is one of the finest ever produced. There is nothing that will add more cheer to the home through long, dark winter months than a few well-chosen house decorative plants, and those we offer comprised the very best varieties in cultivation, and of a size and quality that will quickly develop into beautiful specimens. We give below a description of each variety:

ROOSEVELT FERN.—This fern is a new variety recently introduced and one of the finest for house decorative purposes grown. It is of compact, vigorous-growing habit, producing in great numbers wide, massive fronds of good length, beautifully tapered from base to tip, that droop gracefully over the pot, hiding it completely from view. The pinnae or leaves of this fern are distinctly undulated, giving the whole plant an attractive, wavy appearance, which adds materially to its beauty. Without an exception, ROOSEVELT has proved the strongest-growing variety ever produced and withstands better than any other variety unfavorable growing conditions of indoor culture found in the average home. A small plant requires but little care to quickly develop into a finished specimen of rare beauty.

BOSTON FERN.—This fern is one of the oldest and best known varieties grown, and in the long years of its cultivation has proven well worthy of a place in every home. It is known by some as the "Fountain Fern," which name it derived from its graceful drooping habit of growth, and until the recent production of the ROOSEVELT Fern was acknowledged the finest of its type. It is a very rapid grower, producing fronds of unusual length, frequently measuring from six to eight feet, and its freedom of growth without special care has made it popular with all who admire beautiful house plants.

THE ROOSEVELT FERN.

WHITMANI FERN.—This charming creation caused a real sensation among lovers of plants, each frond being as delicately and finely cut as the most perfect Ostrich Plume, by which name it is commonly known. It is a very vigorous grower, constantly unfolding new fronds of fine, feathery foliage, entirely distinct from any other variety, and which quickly grows to a width of from ten to twelve inches. The foliage is of good, substantial texture that withstands the abuse to which house plants are subjected, and so compact that each frond appears as one massive Ostrich Plume. WHITMANI is one of the few feathery foliage ferns with which everyone can succeed in growing to finished specimen plants under the average unfavorable growing conditions of the house.

ASPARAGUS PLUMOSUS.—A plant for all purposes, rapidly adapting itself to any conditions. Its rapid, sturdy growth, combined with its exquisite, lacy foliage makes it a plant of such airy grace and value as to be desired by everyone. The bright, rich, green fronds are as fine and delicate as the most beautiful lace, by reason of which it is given the name "Lace Fern."

OUR SUBSCRIPTION PROPOSITIONS.

We publish two papers. No. 1 is the monthly NATIONAL FARMER AND STOCK GROWER, the best farm publication in the United States. It furnishes good, instructive reading that will help farmers, stockmen, poultrymen, dairymen, fruit and vegetable growers in any state. The price is 50 cents a year, and anyone who will send us 50 cents to pay for one-year's subscription can select a set of ferns as a free premium, and we will send them fresh from the fernery, safe delivery in good order guaranteed.

Our second publication is the UNIVERSAL MAGAZINE, a bright, little pocket publication of sixty-four pages, two columns to the page. It contains good stories, poetry, fashions, embroideries, illustrations, and is well worth the price, which is 25 cents a year. Anyone who will send us 50 cents to pay for the UNIVERSAL MAGAZINE for two years can select our set of ferns as advertised, and we will send them at once as a premium, safe delivery and good condition guaranteed. Time is flying. Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Overland

10,000 ordered in 30 days

OUR 1914 model was announced last month. Thirty days after this announcement we had on hand immediate shipping orders for more than 10,000 cars. This represents a business of over $10,000,000.00. Such an instantaneous demand can only be attributed to the sheer force of superior merit and greater value.

The newest Overland is in every essential respect the greatest automobile we have ever produced. But in the very face of an unusual value *increase*, the price has been materially *decreased*.

Now "get" these fundamental value facts.

The motor is larger and more powerful. It is rated at 35 horsepower and will develop 50 miles an hour on an ordinarily good road.

More power and speed for less money than ever before.

The wheel base has been increased to 114 inches. Most $1200 cars have a shorter wheel base than this.

More wheel base for less money than ever before.

The tires have been made larger. They are now 33x4 inch Q. D. which means greater comfort and less upkeep expense.

More tires for less money than ever before.

The tonneau is roomier. The upholstery is soft, comfortable and luxurious. The car's appearance is handsomer than any of our previous models. It is richly finished in dark Brewster green, edged with lighter green striping and neatly trimmed in polished nickel and aluminum. It has a full cowl dash.

More comfort, beauty, style and elegance for less money than ever before.

$950

Completely Equipped

f. o. b. Toledo

With Gray & Davis Electric Starter and Generator—$1075

Full electric lights	33 x 4 Q. D. Tires
Storage battery	Brewster green body with light green striping, nickel and aluminum trimmings
35 horsepower motor	
114-Inch wheelbase	Turkish upholstery
Timken bearings	Mohair top and boot
Splitdorf magneto	Clear vision windshield
Cowl dash	Stewart speedometer
Schebler carburetor	Electric horn
Three-quarter floating rear axle	Flush U doors with disappearing Hinges

The equipment is finer and more complete. It includes one of the very best electric lighting systems. All lights are electric.

More costly equipment for less money than ever before.

These greater and newest value additions are made possible by an enormous increase in our annual output. For 1914 we will manufacture 50,000 cars, the greatest production of its kind in the world. Operations on such a gigantic scale permit the consistent use of more money saving manufacturing equipment and enlarged factory facilities. As such operations and additions bring the manufacturing costs *down*, they, in turn, bring the retail price *down*.

Go to the nearest Overland dealer. Inspect this car from a mechanical standpoint; from an efficiency standpoint; from an economical standpoint and from an artistic standpoint, and then you'll realize and acknowledge this car to be the world's latest and greatest automobile value.

Handsome 1914 catalogue on request.

and Stock GROWER

CATTLE-FEEDING CONTEST

Conducted During the Month of September, 1913, at the St. Louis National Stock Yards.

From September 1st to September 26th, inclusive, a show of feeding cattle was conducted at the St. Louis National Stock Yards, and the 119 different exhibits, ranging from one to six car-loads each, were examined and judged by Prof. W. J. Kennedy, of Iowa, who was at the yards four straight weeks for that purpose.

A grand total of 173 car-loads of feeder cattle took part in the competition, and Professor Kennedy, who is one of the leading authorities on live stock breeding and feeding, gave it as his opinion that it was the largest exhibit of feeder cattle one year and upward ever shown.

Points Considered in Judging.

In judging the cattle due consideration was given to the demands of the packer, the cattle feeder and the producer. The perfect score making the 100 per cent. was as follows:

	Per Cent.
Conformation — Straightness of lines, lowsetness, width of back, loin and hindquarters, width of head, shortness of neck, smoothness of shoulder and tail-head and depth of flank	25
Quality—Fineness of hair, uniformity of color and breeding without any undue coarseness of body framework	15
Capacity—Width and depth of chest, length of rib and depth of body, giving a strong constitution and feeding capacity	25
Scale—Good growth for age with sufficient size of bone to insure ruggedness in feed lot	10
Uniformity—The entire load should present a uniform appearance in conformation, quality, capacity and scale	25
Total	100

The Grand Prize.

Grand sweepstakes prize went to Col. J. T. Johnson, of Mexico, Mo., who exhibited a load of Angus feeders that weighed 944 pounds and scored 97 out of a possible 100 points.

Col. Johnson's load of sweepstakes Angus also captured first prize for the state of Missouri. His cash prize winnings on this single load amounted to $200. The sweepstakes steers were purchased by R. B. Glenn, of Stephens, Mo., at $8.15 per 100 pounds, who announced that he will feed these steers and market them at St. Louis next autumn.

Here is how Judge Kennedy describes the sweepstakes load of Angus belonging to Col. J. T. Johnson: "An extra choice load of feeders. Thin in flesh with good conformation, capacity and scale. Very uniform in all respects. An outstanding load of feeder cattle."

Second prize for the state of Missouri went to Thompson & Rader, of Marshfield, Mo., with a load of mixed Herefords and Shorthorns that scored 96¾.

Third prize for the state of Missouri went to W. B. Rariden, of Farmington, Mo., whose load of Shorthorns scored 96½.

J. P. Connolley, of Jacksonville, Mo., received honorable mention for his load of strong-weight Hereford feeders that scored 96¼.

M. H. Mairs, of Milan, Mo., also received honorable mention with his load of Herefords that scored 95.

Total entries for the state of Missouri amounted to 141 loads, and 183 of these, or 98 per cent., scored fair to extra choice. This is a remarkable showing.

The Illinois Offerings.

First prize for the state of Illinois went to S. S. Seiler, of Mount Carmel, whose load of Angus and Hereford steers and heifers scored 96¼.

Second prize in the Illinois division went to L. F. Douglass, of Broughton, whose Herefords scored 95½.

Third prize for the state of Illinois went to Claypool & Burns, of Greenview. They entered a load of Herefords that scored 95.

W. C. Doran, of Creal Springs, Ill., secured honorable mention on a load of Shorthorns that scored 94½.

A. B. Stephens, of Albers, Ill., also received honorable mention on a load of Shorthorns and Herefords that scored 93.

Total entries from the state of Illinois amounted to twenty-one car-loads, and twenty of these ranged from good to extra choice in quality.

Arkansas Prize Feeders.

Contest entries from Arkansas totaled nine cars, and they ranged from good to choice in quality; in fact, the Arkansas feeders in the contest were a credit to the state and clearly demonstrated that Arkansas can raise as good feeding cattle as any state in the Union, once her farmers and stockmen get into the business extensively.

First-prize load of feeders for the state of Arkansas went to Eidson, Webster & Sanders, of Springdale. Their load of Herefords scored 94.

Joe Culwell, of Goshen, Ark., captured second prize for his state with a load of Shorthorns and Herefords that scored 93.

E. A. Rector, of Okean, Ark., won third prize in the Arkansas division with a load of straight Herefords that scored 97½.

Honorable mention for the Arkansas division was secured by E. Dalton, of Pocahontas, who entered a load of Shorthorns good enough to score 91.

Eidson, Webster & Sanders also came in for honorable mention with a load of Herefords they exhibited that scored 90½.

Kansas Entries of High Quality.

G. D. McPherson, of Topeka, Kas., won first and second prizes for his state with two loads of Shorthorns. One load of yearlings scored 96 and one load of two's scored 95. Mr. McPherson had no competition, as the drouth in Kansas this year cut down the entries from his state. However, his cattle were very fine in quality and would have held their own in the face of heavy competition.

Money the Winners Received.

The prize list is as follows for car-lots of eighteen head or more:

State.	1st Prize.	2d Prize.	3d Prize.
Illinois.	$100	$65	$35
Missouri	100	65	35
Kansas.	100	65	35
Arkansas	100	65	35
Grand sweepstakes, any state			$100

"Analyzing the results of the contest," said Professor Kennedy, "you will see that 145 cars out of total entries of 173 loads ranged from good to extra choice in quality and graded from 83 to 97.

"Or, put another way, eighty-four per cent. of the total entries in the contest scored 83 to 97, ranging good to extra choice in quality. This is a showing I think your market should well be proud of. I noticed that most of the feeders of the contest were sold to go to Missouri, Illinois, Ohio, Indiana and Pennsylvania points. I feel confident that these feeders will do very creditably for their new owners.

"I know of one bunch of contest heifers that went to a Tennessee farmer at $7.00 per 100 pounds. This shows that the South is keenly alive to the necessity of stocking up with high-grade cattle."

The Feeder Contest will be a feature at the St. Louis National Stock Yards during the autumn of 1914. As there will be more time to prepare for that event, and the pioneer work has been already accomplished, next year's contest will surely be bigger and better in every respect. A feature of the 1914 event will be a regular auction day each week for selling the contest feeders. There will also be additional states in the premium list and doubtless many other new features which will be announced from time to time.

SEE HIM FIRST!

Before the fertilizer salesman arrives, go to your dealer and explain to him that you will not buy 2 per cent. goods that contain only 40 pounds of Potash per ton. Show him that modern, profitable fertilizers contain from 5 to **10 per cent. Potash,** and that the composition of crops and the effect of crops on soils require that the per cent. of Potash should be increased until it is as great as, or greater than, the per cent. of Phosphoric Acid in the fertilizer. It is this grade of goods that pays you and your dealer best. The quantity and quality of the crops are better and the actual plant food costs less per pound.

CANADIAN CATTLE PRODUCERS.

What Congress Did For Them and For Other Foreign Producers Pie For Them.

The live stock editor of the Toronto Canadian Sun of October 15th had the following, which was entitled "Let Us Have More of the Pie:"

"No piling up of words is necessary now to convince even people who are least open to conviction that those who argued in favor of reciprocity two years years ago were right in at least one of their contentions.

"Supporters of the Fielding-Taft agreement maintained that reciprocal free trade in cattle must prove advantageous to Canadian cattle producers, because the price of cattle was higher across the lines than here. They pointed to market reports in proof of the assertion made. To-day all Ontario is having ocular demonstrations of the truth of what was then asserted.

"The moment the Americans removed their tariff on cattle that moment a stream of bullocks began pouring towards Buffalo along every line of railway in Western Ontario, and cattle prices in Toronto advanced from a top of $6.35 immediately before the removal of the duty to a top of $8.00 on Monday of last week.

"If the United States duty were removed to-morrow from horses, butter, cheese, poultry, barley, potatoes, fruits, vegetables and all other farm products, corresponding advances would take place in those lines to-morrow.

"Our (Canadian) government has it in its power to secure that removal. The American offer of reciprocity still stands on the statute books of the United States. All that is necessary is the acceptance of that offer in order that Canadian farmers may secure free access to the American market in all lines of farm produce. Acceptance of the offer there should be.

"We have had a bite of the American market in the form of free cattle. More pie, please."

One Had Done It.

The suffragette was speaking.

"I'll bet there isn't a man in this audience who ever did anything around the house for his wife. If there is a man in this room that ever made the fire, milked the cow, cleaned the windows and made the beds every day without a kick, I'd like to see him, that's all."

But she forgot her husband was at the meeting. And he didn't dare stand up!—Post-Dispatch.

DO YOUR OWN THRESHING

of beans and peas with a guaranteed Owens Thresher. All your seed separated and cleaned from the vines and pods without splitting. Pea and bean growing is the most profitable farming if handled right.

OWENS DOUBLE CYLINDER

Bean and Pea Thresher

—Made in 4 sizes—

Will pay for itself many times over in one season. Guaranteed not to split the seed and take all from the vines.

FREE BOOK

Send for our free book of valuable information about bean and pea culture. Illustrations and description of our machines. Facts and figures showing results obtained by users of our Hullers—write today.

COTTON GIN REPORT.

An Increase Over Last Year, But Not Near the Figures of 1911.

The third cotton ginning report of the season, compiled from reports of Census Bureau correspondents and agents throughout the cotton belt and issued October 25th by Director William J. Harris, announced that 6,956,583 bales of cotton, counting round as half bales, of the growth of 1913 had been ginned prior to October 18th.

This includes the results of the most active period of the ginning season, September 25th to October 18th, during which, in recent years, more than one-fourth of the entire crop passed through the ginners' hands.

To October 18th last year, 6,873,206 bales, or 51 per cent. of the entire crop, had been ginned; in 1911 to that date 7,758,621 bales, or 49.9 per cent., had been ginned; in 1908 to that date 6,296,166 bales, or 48.1 per cent. of the crop, had been ginned, and in 1906 to that date 4,931,621 bales, or 38 per cent. of the crop, had been ginned.

Included in the total ginnings were 49,024 round bales, compared with 41,741 bales last year, 53,858 bales in 1911, 66,183 bales in 1910, 88,716 bales in 1909, and 118,720 bales in 1908.

The number of Sea Island cotton bales included was 30,880, compared with 15,960 bales last year, 40,303 bales in 1911, 36,482 bales in 1909, and 32,013 bales in 1908.

PROTECTING THINGS.

Flowers and Fruits—How to Protect Them Over Winter—Timely November Topic.

In many of the northern localities some of the plants have to be protected in the winter to prevent them freezing back to the roots or to prevent the roots freezing.

Where strawberries have to be covered, it should not be done till the weather has become cold and the top of the ground has been frozen. If the plants are covered too early, while the weather is warm and the plants wet, there is danger that the plants will rot. If the cold has become so settled that there is not likely to be a warm spell, it is safe to cover. Coarse material is best for this covering, as it will let in the air, while protecting from the sun. The main reason for protecting the plants is to prevent them from thawing out during warm days and not to prevent them from freezing. Once frozen, it is desired to keep them frozen till spring and then leave the covering on just long enough to permit the plants to thaw out gradually. The covering must be removed in the spring before mildewing or rotting of the leaves takes place.

Blackberries need to be covered in several of the Northern States. Where the soil is well drained and of a sandy nature, the best plan is to dig away the soil on one side enough to allow the plant to be bent at the root, low enough down so it will not break. The plant is then laid level with the ground, and a man holds his foot on it while earth is piled over it. Of course this dirt must be removed early in the spring, so as not to injure the buds.

Grapes are a harder proposition to handle. In some of the large vineyards, even in Michigan, the vines are taken down from the trellises every fall and the lower parts covered with earth. The pruning should be done before the grapevines are covered, as this will reduce the amount of vines to be covered. In covering, the vines should be laid down in the direction of the row. If the area is large, a furrow can be turned over them. But if only a few vines are to be so treated, it may be done by hand.

Roses are hard to protect, as they cannot easily be laid down. The most effective way of protecting them seems to be to wrap them with dry horse manure that is largely litter. This can be covered with newspapers tied around with string to keep the straw more securely in place. One man tried putting boards around and filling with coal ashes, but this did not work well for some reason and the plants died from freezing and thawing quite as much as they would have done unprotected.

Where trees and grapevines are in sod, the sod should not be broken up in the fall, as this will enable the frost to reach roots that have never before been reached by the freezing cold. If the winter is hard, this condition is likely to cause the loss of both trees and vines. This was a very common cause of loss from freezing in the hard winters of 1898 and 1899.

A little attention to these things at the right time will save many fruit-bearing trees, vines and plants.

Among the Plants.

It is always with a pang of sorrow that the flower grower surveys the work of frost, and either consigns the treasures of the summer to the elements or singles out here and there some favorite to be given a safe place in the home. When the cosmos and salvia are in the height of beauty, this may be retained for weeks if the soil is thoroughly drenched with water, letting the roots soak up the moisture for some hours. Then carefully transplant to a pot of rich soil and leave out doors in a shaded spot for a few days, keeping the soil moist at all times. The secret of success is in having the roots well filled with water before they are disturbed. Otherwise the plant is almost sure to wither, and then recuperation is slow and uncertain.

A hardy hydrangea was steadily dying, despite attention. The owner called the attention of a specialist to its condition, thinking there might be some insect or disease at work. He could detect nothing of the sort and advising her to give it a more sunny location, reminding her that the surrounding trees were small when it thrived and did its best; as they grew the lack of sunshine could easily work havoc with the shrub. And thus we may often, through our very love for flowers, crowd so many together that something must pay the penalty.

The best landscape gardeners refrain from breaking the sward on the lawn, restricting the flowers to the edges and background, or to margins of walks and drives. There is much in this, and the rural flower garden, which should be a bit of paradise, may be easily marred by lack in the planning. If your own fails to compare with that of a city friend, do not be discouraged but try to locate the fault. You have the soil, the sunshine, the room. You can have flowers that will compare favorably with the best; it may be just a little shifting of plans would improve matters amazingly.

The row of hollyhocks which has for generations lined the garden fence may prove an admirable screen between the front and back yard. If there is a dilapidated fence which is needed and cannot be replaced by a better one, plant a honeysuckle at each post; or a clematis; or scatter seed of the wild cucumber. There are many strong-growing vines which will convert the disagreeable feature into a thing of beauty. If one of your favorite trees should happen to die, consider before having it cut down whether or not it could be used to advantage as a support for the trumpet vine, Virginia creeper or some other rapidly-growing vine.

Flowers grown in masses are usually more satisfactory than the striving to have many sorts in the same bed. One lady decided last year that in a fence row which had usually grown weeds she would have foxgloves. The result was that this summer her flowers, in all possible blendings of color, were very much admired. But had she given this extended space to a half dozen different species the effect would have been materially lessened.

A bed of dahlias is a thing to look forward to with pleasure. If you have a few roots of possibly only one or two good varieties, watch your chance and exchange with a friend; or, if this is not practicable, even one or two good varieties well grown, massed about the kitchen porch, where they will be given an abundance of water and sunshine, will make this a beauty spot besides supplying bouquets innumerable.

Plan now for next summer and work out the plan as rapidly as possible, even if the present be only in laying the foundation for a fertile bit of soil. A five-cent packet of seeds next summer, or a few choice bulbs planted now, will give more real pleasure than many expensive purchases later. One of the charms of farm life is the chance to have flowers in abundance. You may think you have not the time; but a few minutes every day in the garden will bring increased strength to turn off the work more rapidly.—Bessie L. Putnam.

His Hundred Per Cent.

Sammy was not prone to overexertion in the class room; therefore, his mother was both surprised and delighted when he came home one noon with the announcement: "I got 100 this morning."

"That's lovely, Sammy!" exclaimed his proud mother. "What was it in?"

"Fifty in reading and fifty in 'rithmetic," was Sammy's reply.—Lippincott's.

The Beautiful "NATIONAL" Fall Style Book Free

One copy of the "NATIONAL" Money-Saving Style Book is yours Free. It is filled from cover to cover with beautiful styles and genuine bargains. It shows every kind of apparel for Women, Misses and Children at "NATIONAL" Money-Saving Prices.

A Nursery Proposition.

On page 12 will be found a proposition by the H. J. Weber Nursery Company at Nursery, St. Louis county, Mo. This nursery was established in the year 1867, and is one of the best known in the trade. They grow fruit and ornamental trees, evergreens, shrubs, wholesale and retail. Our readers who deal with this firm will find Messrs. Weber will fill orders exactly and give perfect satisfaction.

CORN MARKET SITUATION.

Higher Market Than It Would Have Been Had the Crop Been Larger —A Seventy-cent Market For Some Time to Come.

We have always said, and will always stick to it, that the farmer is well informed of the prospective value of his grain crops. The little corn, comparatively speaking, that is shipped into market, compared to the total of the full crop of the country, is like the tail is to the dog, and in this case the tail wags the dog.

The stock feeder who feeds large quantities of corn has to figure on the Chicago basis and apply it to his locality by deducting freight to Chicago, or by competing with the local traders who are shipping to Chicago, or who are watching Chicago, even if they are shipping elsewhere.

We are not afraid that any other country will begin to flood the American market with corn. By admitting corn from other countries free of duty some corn may come in that otherwise would not come, but it is not with corn as it is with oats and wheat, because corn, like cotton, is a crop in which other nations are not so productive.

The corn market is the most independent of foreign conditions of all the grain crops. The short crop is holding up prices, and no country can ship in sufficient corn to reduce the prices. Corn is too high to cause any heavy stock feeding.

At the time we are writing, which is after the close of the market on October 31st, oats are selling at $1.25, corn at $1.34, and wheat at $1.60 per 100 pounds. These figures are not quite exact, but are near enough, and by the 100 pounds is the right way to look at grain prices.

Corn has advanced in price since last November, when the cash corn at St. Louis sold at 46½ cents a bushel, and the advance was gradual until on September 30th cash corn at St. Louis sold at 72 cents a bushel, and on October 31st the price for No. 2 corn on the St. Louis cash market was advanced to 74½ cents, which, by the way, was also the August closing price at St. Louis.

Our readers will remember that we left the September Chicago corn option on September 30th at 70⅝ cents, where it died by limitation of time. The December corn option at Chicago, September 30th, was quoted at 70⅝ cents, and on October 31st the quotation was little changed, but it was lower by a fraction at 70¼ cents.

On September 30th, at Chicago, the corn option that matures on May 31st of next year was quoted at 72 cents, and by October 31st the figure had also declined to 71¼ cents, and another option has since come to life, which is July, and the first quotation noticed by us was 70⅝ cents a bushel. There you have the corn market without the slightest prejudice. The past is the September trading; cash corn, 74½ cents; the present is the December option, 70¼ cents; the future May, 71¼ cents; and the far future July quotation at 70⅝ cents. Any farmer who reads this over and who knows the rate of freight from his own shipping point to Chicago can estimate his own market prospect for corn.

Corn Option, Chicago Basis.

	Sept.	Dec.	May.
1913.			1914.
May 31	58¼	56⅝	....
June 30	62¾	59½	....
July 31	66	63	65
August 30	72¾	68⅝	70½
October 31		70¼	71¼
October 31		70¼	71¼

In every issue of The National Farmer and Stock Grower we publish a review of the corn market. Each chapter is complete in itself, and the file of the publication makes it a continual story. There is no better way for a farmer to keep track of grain values than to keep a file of The National Farmer and Stock Grower.

Cash Grain at St. Louis.

On October 31st the cash grain at St. Louis sold as follows:

Wheat.—No. 2 red sold at 95 to 95½c., this side; East Side, at 95 to 96½c., latter delivered to destination; No. 3 red quoted at 93 to 94¾c., nominal; No. 4 red quoted at 90 to 93c.; No. 2 hard sold at 85½ to 86½c.; Kansas Turkey held at 92c.; No. 3 hard sold at 85c.; Turkey, 86 to 88c., nominal.

Corn.—No. 2 corn, 74½c.; No. 3 corn, car, 74½c.—74c., nominal, No. 2 yellow, 74½c.; No. 3 yellow, 74c., nominal; No. 2 white, 74½c.; No 3 white, 74c., nominal; cob corn, yellow, 75c. for old.

Oats.—No. 2 oats, 40 to 40½c.; No. 2 white, 42c.; Standard oats, 41½ to 42c.; No. 3 white, 40 to 41½c.—mainly 40 to 40½c.; No. 1 white, 39 to 40c., nominal; No. 3 oats, 39½ to 40c., nominal; No. 4 oats, 38½ to 39c., nominal.

St. Louis Apple Market.

Sales of arrivals early in November: River receipts (in extremes of quality): Ben Davis at $1.75 to $2.25 for No. 2 and $2.50 to $3.00 and $3.15 for choice to fancy; Gano at $1.75 to $3.25; Lansingburg Pippin, $2.25 to $3.50; Geniting, $1.75 to $3.00; Winesap, $2.25 to $4.50; Willowtwig, 2.00 to $2.65 for No. 2 to $3.50 and $3.75 for fancy; Blacktwig, $2.50 to $4.00; other varieties in proportion; common, small and trashy, wormy, etc., $1.25 to $1.75. Bulk Eastern Greenings selling at $2.40 per barrel measure, delivered, and bulk Ben Davis, $1.15 per 100 pounds on track for orchard run and hand-picked.

Producer and Distributer.

The inevitable difference between the milk producer and the milk distributer was in evidence at St. Louis during the month of October. The principal difference, according to the local press, is, that the dairymen say they wanted $1.90 a hundred pounds for milk showing three per cent. cream, and the St. Louis milk dealers offered only $1.85, but offered to pay $1.92⅔ for milk showing four per cent. cream. According to another statement, the farmers are being paid 18 cents a gallon, out of which they have to pay 1½ cents a gallon express charges. Cyrus Love, of Edwardsville, Ill., is Secretary of the Milk Shippers' Association, and the active Milk Committee is composed of F. M. Rule, St. Jacob; R. F. Ridgeway, Pocahontas; and William Schroeder, Brighton, Ill. At the close of the month it was reported that the differences for the present had been adjusted.

St. Louis received 29,550 tons of hay in October, 1913, against 21,323 tons in October, 1912.

BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.

The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal and The Reliable Poultry Journal.**

WHEAT MARKET SITUATION.

A Rather Dull Affair, Without Much Hope of an Advance—Red Wheat Independence of Hard Wheat Conditions.

Wheat is now a world's crop without the interference of an import duty except that before Canada can participate in the benefits of the new condition that country must reduce her own duties; in other words, must agree to receive American wheat free of duty, which will be done when the Canadians see fit to pass the necessary legislation. Canada will certainly accept the piece of pie which our Congress and President have baked for them. In the meantime the free admission of wheat from other countries is not obstructed.

The shadow of this free admission of foreign wheats was discounted some time ago, and since last May farmers have not received what may be called a profitable price for wheat. Then, indeed, the good prices paid were for the soft red wheats, of which St. Louis is the central market, that sold above the dollar mark per bushel, and not for the hard wheats, that kept below the dollar mark.

We will now give the closing price of No. 2 red wheat at St. Louis and sold on the cash market on the last day in the month, and from these figures the depressed condition of the market can be understood. January, 1913, $1.08 to $1.12½; February, $1.06 to $1.09; March, $1.05 to $1.07½; April, $1.09 to $1.11; May, $1.03 to $1.06½; June, 89 to 91 cents; July, 83¾ to 85½ cents; August, 89 to 92½ cents; September, 92½ to 95½ cents; and October, 95 to 96½ cents a bushel. These St. Louis prices for soft red wheat vary from a fraction to nine cents a bushel more than hard wheat sold on the same market, there being a general understanding that soft red wheat is worth three cents a bushel more than hard wheat. We can therefore give it as our opinion that importations that will be largely of hard wheat will be slow to affect the prices received by the grower of soft wheat, and the day will come when in the general market quotations telegraphed day by day the difference between the soft and hard wheat will be given more prominence than at present.

In the meantime, let us state that on the cash wheat market of St. Louis, October 31st, soft wheat sold at 95 to 96½ cents a bushel, and that hard wheat, No. 2, sold at 86½ to 92 cents a bushel.

Turning to the Chicago market and noticing the Board of Trade quotations, we remember that on September 30th the September wheat option went into history at 85⅛ cents, against 91½ cents a year ago.

On September 30th the December wheat option was quoted at Chicago at 87⅝ cents a bushel, and on October 31st the price was reduced to 86¼ cents a bushel.

On September 30th the May, 1914, option was quoted at 92⅝ cents a bushel, and by October 31st the price had declined to 90¾ cents.

There is the wheat market. The past is represented in the cash wheat prices at St. Louis and the dead September option at Chicago; the present is shown in the December option, the next to mature; and the future is shown in the May, 1914, quotation, which will come to the front of the stage and hold the spot light from January 1st to May 31st of the year 1914, and by that time the new condition of the admission of foreign wheat free of duty will have shown what it means.

In admitting foreign wheat free of duty Congress has thrown the American market open to the whole world and no longer trusts the American farmer to feed the American people. If therefore the price of wheat should reach low marks that are unprofitable to the American farmer (and we are dangerously near that condition to-day), then must Congress recognize the responsibility for the drain of money that will for years go abroad to support the farmers of other countries. If any acreage is reduced by reason of lower prices consequent to the admission of foreign grain free of duty, wheat will be that crop. We do not hope to see it, but we fear it nevertheless.

Canadian Potatoes.

"Here and there the new tariff strikes a community as something very real and not simply as an interesting document that Congress has been discussing. Lubec, Me., has learned that the new tariff is more than a vague, distant and intangible economic theory. Last Tuesday, for the first time since a steamer has been running between St. John and Boston, the Boston steamer did not stop at Lubec on the way. Instead, the captain sent word ashore that the steamer was loaded with Canadian potatoes and other farm produce now admitted to the United States free of duty, and that it could take no Lubec freight to Boston. On the Lubec wharves were several thousand cases of sardines waiting shipment on rush orders, and standing around were several scores of laborers waiting the $3.00 that would come to each as his payment for loading.

"A small matter, no doubt, but it has loomed pretty big in the general conversation of Eastern Maine for the past few days, and there are other communities that will understand the significance of the incident. Of course, other steamers will bring the sardines later and the delay will probably work no harm. But how about the cargo of Canadian potatoes and other produce? Does it mean lower prices in the Boston market? What housewife sees the difference? Yet in theory there should be a sudden drop of 25 cents a bushel in the price of potatoes, for that was the duty now removed."—Boston Morning Herald.

OATS MARKET SITUATION.

Reduced Prices, Amounting to Two and Four Cents a Bushel During the Month of October.

We regret to see that the market for oats declined during the month of October, 1913.

The cash quotation for oats at St. Louis on August 30th was 41 to 41½ cents a bushel; on September 30th the price was 42½ cents, and on October 31st the price was 40 to 40½ cents. That is, taking the figures from month to month on the last day of each month.

We left the December option quoted at Chicago, September 30th, at 42⅝ cents, and on October 31st, at the close of the market, we find the price is reduced to 38⅝ cents, a clear loss during the month of October of four cents a bushel.

We left the quotation of the May, 1914, option at 45⅞ cents on September 30th, and find by October 31st that the price has been reduced to 42½ cents, a reduction of 3⅜ cents a bushel. We take no notice of the fluctuations during the month, which consist of many ups and downs, and stick to the monthly record as the one to keep for reference.

Herewith we append the simple statement showing at a glance the closing oats option figures at Chicago from May 31st, 1913:

Oats Option Quotations.

1913.			1914.
	Sept.	Dec.	May.
May 31	38⅝	39⅞	....
June 30	42⅜	43⅞	....
July 31	41	43⅛	45⅜
August 30	41	43⅞	41
September 30	41½	42⅝	42½
October 31		38⅝	42½

Our views upon the subject of oats are well known. We consider fifty cents a bushel in market the lowest price to give the farmer fair remuneration. The market prices are made from sale of a small fraction of the crop. Not over a third of the crop ever reaches the channels of trade. Immense profits are made on oats that enter into the trade for human consumption, and yet we see that the market is declining.

What We Buy Abroad.

"There will be no panic because of the new tariff; on that every one is now agreed. We are not going to get excited about the new conditions. Manufacturers will simply accept it as it comes. What is sent to this country from abroad under the new rates we simply will not manufacture here. How many those goods will be and how many men it will throw out of work are questions that are for future determination. But one thing is certain, and that is, what we buy already made abroad we will not have to make here."—Cedar Rapids (Iowa) Republican.

"A good word is an easy obligation; but not to speak ill requires only our silence, which costs us nothing."—Tillotson.

CAUTION!

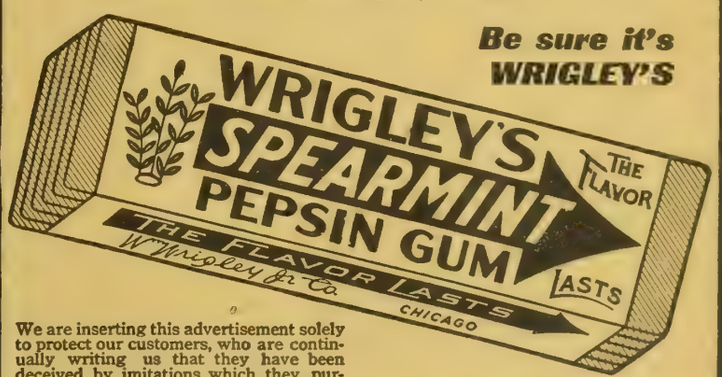
The great popularity of ***the clean, pure, healthful***

WRIGLEY'S SPEARMINT

is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine WRIGLEY'S SPEARMINT. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These rank imitations cost dealers one cent a package or even less and are sold to careless people for almost any price.

If you want *Wrigley's* look before you buy. *Get what you pay for.*

Be sure it's WRIGLEY'S



We are inserting this advertisement solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were WRIGLEY'S.

FAIRS, ANCIENT AND MODERN.

With Something About the National Corn Exposition.

Fairs are not new, but they hold entirely new features from old or ancient days.

As known to the Egyptians, Fairs were gala days for the upper classes, where racing, wrestling and other feats of strength held the center of the outdoor stage.

The amusement of the multitude seemed to be the whole purpose of these ancient festive gatherings, and to the extent they attained this object they were a success.

In time these outdoor carnivals grew into Street Fairs, which took on the nature of a trade mart, where people brought their wares to trade or sell, and after disposing of their goods joined in the general festivities, chatted with their neighbors from far and near and went home feeling that the day had been well spent.

Street Fairs grew into County Fairs, then State Fairs, these last-named dignified by state aid and controlled by state authorities. Cheap side shows and betting fakirs were gradually driven out, higher class attractions took their places and educational exhibits from Agricultural Colleges, Experiment Stations and other sources formed a small part of the exhibitions.

Agricultural education from various sources has grown into popularity, until to-day educational features form the main item of Fairs and is the axis of activity around which the old-time entertainments revolve as remnants. Fair Directors, realizing that the old adage, "All work and no play makes Jack a dull boy," also Jill a dull girl, is as true to-day as in the olden times. But the entertainment is of a class fitting an educational institution, and the term Fair is not so frequently used as a screen to hide gambling establishments and fakir resorts, as has been done in comparatively recent times.

All these agencies for Agricultural Development Fairs, Agricultural Colleges and Experiment Stations, Government Farm Demonstration Work, Boys' and Girls' Corn and Canning Clubs, Industrial Congress, Farmers' Congress and Unions, have worked together to pave the way for a great National Agricultural Exposition, which retains all the educational advantages of the local agencies and offers still wider opportunities for agricultural education and advancement.

At this Greater Sixth National Exposition, to be held in Dallas, Texas, February 10th to 24th, 1914, will be offered the greatest opportunity for states and sections to legitimately advertise themselves through an undisputable display of their natural resources. Their development can be truthfully and legitimately shown through their exhibitions.

In a limited sense, Fairs are the barometers of business, indicating by their displays and attendance whether it has been a good or bad year, in the agricultural papers, and as that goes so goes the rest of the business circles. The money market goes up and down with every rise and fall of crop conditions. Fairs act and react on the atmosphere of the whole business world. They stimulate to better and more crops, and these in turn make a good Fair possible, which is in itself a pretty good sign of business prosperity.

At this National Exposition the trades of the world may temptingly display their goods to the most intelligent buyers, farmers who realize that better implements make possible better methods of farming, and bigger and better crops, at the least cost.

Through the co-operation of the several states and the United States government it is possible to show modern methods of farming on a much larger scale at this national exhibition than would be feasible at a smaller Fair.

For instance, there will be a display of silos to show the operation of building and conducting these almost indispensable store houses and feed bins of the successful dairy farmer. The silo is of especial value to the farmer in the West and Southwest to tide over periods of drouth. When conditions prevail which cut short the forage supply, the farmer is brought face to face with a shortage of forage, which in a large number of cases necessitates the selling of some of the live stock, which cannot well be spared from the farm. A man who has one hundred and sixty acres of land could better afford to maintain a silo and cultivate intensely not more than forty acres, raising sufficient to fill the silo and thereby tide his stock over shortage periods. The rest of the one hundred and sixty acres could well be sacrificed or used for pasturage during times when sufficient moisture was present to cause the growth of vegetation.

Another department of the Exposition of vital importance to the consumer as well as the producer of milk will be the dairy exhibition, where the latest devices and means of handling milk in a most sanitary manner will be shown side by side with one that is a menace to the health and progress of any community. We are sorry to say that too many of the latter sort are furnishing the milk supply of our towns and cities.

Not any interest of the farm will be neglected, and the man who misses the opportunity to learn the most scientific principles of farming, get up-to-date and advance in his profession, will be left behind his progressive neighbor who is determined to get there.

The betterment of agriculture has become a world necessity, and the Sixth National Corn Exposition will be one of the great agencies for the uplift of the farming profession.

This is the slogan of the Exposition around which all else must revolve, but there will be entertainment features, too, for those who want to be rested and amused.

There will be much of value to every man, woman and child who may attend.—C. P. Bull, Manager National Corn Exposition.

St. Louis Root Quotations.

Towards the end of October the following prices were paid at St. Louis for country shipments of roots: Quote by the pound: Golden Seal, $4.55; Lady Slipper, 17c.; Seneca, 54c.; Pink, 34c.; Black, 8½ to 9c.; May Apple, 5¾c.; Snake, 32c.; Blacksnake (Echinacea), 10 to 11c.—split, half price; Angelica, 5c.; Wahoo—Bark of root, 20c.; bark of tree, 5c.; Wafer Ash bark, 6c.; Blood, 5½c.; Blueflag, 2½c.; Sassafras—Bark of root, 5c.; Wild Ginger, 7c.; Spikenard, 3c.; Skullcap leaves—Bright, 9c.; dark, less; Wild Ginseng, $7.70 to $7.90; transplanted, $5.00 to $6.00; cultivated, $2.50 to $5.50.

At the sale of Guernsey cattle held at Canandaigua, N.Y., by F.G.Benham & Sons, Miranda of Edgewater, daughter of Miranda of Mapleton, champion long-distance butter cow of all breeds, sold to F. M. Warburg, of White Plains, N. Y., for $2,500. Three other Guernsey females sold at $1,200, $1,700 and $2,025, respectively.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.

2516 Railway Exchange, Chicago.

Instruction For Farmers.

The College of Agriculture of the University of Missouri has arranged to give branch short courses this winter for the farmers who are unable to attend the University. These courses are given at any place in Missouri where the local interest is sufficient to insure a good attendance and a successful course.

During the winter of 1911-12 eleven such courses were held in the following counties: Clark, Grundy, Harrison, Lewis, Lincoln, Macon, Newton, Nodaway, Pettis, Pike and St. Charles. Eight hundred and sixty-two farmers received the benefit of these courses. This year the University desires to extend the work over the entire state. A large number of applications for information regarding branch short courses is expected by the College of Agriculture at Columbia, Mo.

"The Conqueror is regarded with awe; the Wise Man commands our esteem; but it is the Benevolent Man who wins our affections."—From the French.

PLANS FOR THE FARM.

Arrangements First to be Made—Trees Known by Location After Labels Disappear — Frame the Plan and Keep It in Sight.

There was a time when plans for the farm were of little value. That was in the early days, when farms were far separated and the amount of land in each farm was large, and when no "modern improvements" were to be found on any farm.

With the increase of demand for farm improvements has come an increased demand for farm plans showing all parts of the farm. Before erecting the buildings on any farm, plans should be carefully laid and as carefully worked over to find out all the objections to them, so they may be remedied before money is laid out in accordance with the work they indicate.

One of the greatest mistakes is to permit large quantities of tile to go into the ground without an exact plan being retained of just where the mains and laterals are. Yet too often the farmer depends on his memory, and when he dies no one can tell anything about them.

When it becomes necessary to extend the laterals or place new and additional laterals on the mains the farmer must spend much useless money trying to find out where the old tiles are. If the farm changes hands, the problem of managing the tile drains is so much harder. Doubtless the time will come when new purchasers will demand a plan of all tile drainage just as certainly as they now demand an abstract of the transfers of the property.

Every time a plantation of any kind is put out, every object should be marked on a plan that can be kept. The writer has found this of great importance. Many years ago he planted a lot of plum trees of different varieties. A plan was made and every tree was marked on the plat. Many times since, when the name of a variety had been forgotten, reference has been made to the plan. There were originally labels on each tree, but these all disappeared in a few years or the names became so dim that no one could read them. The plan of this plum orchard is nailed up in one of the outbuildings, where it can always be seen. The same was done to a plantation of grapes of different varieties and proved useful. The same thing was remembered when the rose bushes were set out, and in a few years this plan of the rose bushes became the only means of surely identifying the different varieties.

It is surprising how soon one forgets the names of trees and shrubs that have been put out. It is therefore the more necessary that there be a complete plan of the farm, embracing all the sub-plans on which all these things can be shown in detail.

A plan to be valuable must be always in evidence. To make a plan and file it away somewhere is to place it out of use. One will forget where the plan is, or it will take too much time to hunt it up. It can aways be tacked up somewhere where its location will be known. It is always well, however, to have an extra plan to be filed away out of sight. The building may be burned were one plan is and the other will then be needed, or the one tacked up in the outbuilding may become dusty and dirty or soiled with age and need to be replaced.

When new trees or shrubs are put in place of those that have died out, a new label can be pasted over the old notation, and this should be done on both plans.

Protect Your Hogs From Disease!

I'll Help You Prevent Your Losses
I'll Get Rid of the Worms in Your Stock
I'll Prove It Sixty Days Before You Pay

NOW is The Time for you to get rid of the deadly stomach and free intestinal worms—the pests that sap the strength and vitality of your farm animals, making them easy victims of cholera and other diseases.

Read these Letters. They prove that "a stitch in time saves nine."

"A lot of hogs died in this county from swine plague or cholera. Some of them were within three miles of me, but I have been feeding Sal-Vet and have not lost a single hog."—D. A. ROSS, Kingman, Kans., Breeder of Pure Bred Poland Chinas.

"As the hog cholera is prevalent all through this section, I have been feeding Sal-Vet to my hogs. Since then, I never saw them in better condition, in spite of the fact that all around me the cholera is carrying them off by the hundreds."—W. J. BROOKS, Diggs, Va.

Hogs ***free from worms*** are best protected against Cholera and Swine Plague and most apt to recover when attacked. Read the letters in the next column. ***Worms are your greatest enemies*** — worse than cholera — they are everlastingly stealing your stock profits — weakening your farm animals and keeping them from putting on flesh. And worst of all in times like this when cholera breaks out in your neighborhood, you may lose hundreds of dollars in a few days just because your animals have been robbed of their fighting strength and vitality by ***worms.***

S. R. FEIL Pres.

I'll Feed Your Stock 60 Days Before You Pay

If you will fill out the coupon below—tell me how many head of stock you have—mail it to me, I will ship you enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives. Let your stock run to it freely according to directions and at the end of 60 days, report results. If Sal-Vet does not do what I claim, I'll cancel the charge. You won't owe me a cent.

SIDNEY R. FEIL, President
THE S. R. FEIL COMPANY, Mfg. Chemists
(111) **Dept. NSFG — Cleveland, Ohio**

Read How SAL-VET Stops Losses Among Farm Animals

"Hog cholera has been all around me and I have not had one sick hog. I cannot praise "Sal-Vet" too highly, and I do not hesitate to recommend it to all hog raisers."

A. O. Kellogg, Troy, Grove, Ill

"Last year I lost all of my hogs from cholera. This fall and winter I have been feeding "Sal-Vet" and lost none."

Cleveland Rice, Scort, Ohio

"My neighbors, who have NOT fed "Sal-Vet" have all kinds of trouble with their hogs—many of them getting lame and stiff, and would not eat. I think "Sal-Vet" is great stuff."

Harry E. Townley,
Cambridge, Springs, Pa.

"I have fed "Sal-Vet" to my sick hogs and found it very beneficial. Before your remedy arrived nine of my hogs died. Since feeding the preparation I lost but one more and the balance are in fine hearty condition."

(Signed) Joseph Walter,
Route No. 2, Box 33, A.
Freeburg, Ill.

I have just finished feeding the 200 pound barrel of "Sal-Vet." My hogs are the only ones left in this immediate locality. I haven't lost one."

James F. Martin,
Little York, Ill.

"I did not for a minute expect such results as I obtained from your SAL-VET. It expelled more worms from my hogs than it would take to fill the keg it came in. I will order more soon for it is a great preparation."

Geo. B. Coffinbarger,
Shepherdstown, W. Va.

"When I received your SAL VET my hogs were very unthrifty—but they did not stay that way long after feeding SAL-VET. I never had pigs do so well. They were soon in top condition. My horses also improved on it fine. It sure does get rid of the worms. Please send me another barrel at once."

D. P. Copp, Carrel, Iowa.

"I had a lot of sick hogs and I lost five of them. I began feeding them SAL-VET, my losses stopped and the hogs soon got into a fine, healthy condition.

"SAL-VET did the same for my sheep and horses and several of my neighbors have had the same experience with it."

V. P. Underwood,
Roachdale, Ind.

Subscription Price in the United States, 50 cents a year, or three years for one dollar. Canada and foreign subscriptions 75 cents a year.

FARM AND STOCK NOTES.

According to census office reports, 1,151,626 pounds of beef were imported into the United States; also 70,311 pounds of mutton and 5,715 pounds of pork. That was in August, before meat was admitted free of duty.

There is one thing that Congress cannot deprive the farmer of, and that is the ever-increasing population.

We have very little regard for a tariff law that protects many industries and at the same time has taken away the little protection the farmer had.

Lands in Canada are worth considerable since the markets of the United States have been opened to Canadian farm products free of duty.

Lower Than the High Time.

The idea that high prices are now being paid for cattle on the hoof may just as well be exploded. The market prices being paid on the great cattle markets at the opening of November, 1913, are practically two cents a pound lower than during the high time. Retail meat prices have been kept up in the face of reduced cattle prices. Heavy fat cattle, such as used to top all cattle markets, are now selling 50 cents a hundred pounds less than yearling steers that average less than a thousand pounds. On October 30th, heavy cattle sold up to $9.05, and during the week the highest price was $9.30 for the best heavy cattle on sale during the entire week. It is not long ago since such cattle sold at $11.30 per 100 pounds.

Canadian Cattle at Buffalo.

On Monday, October 27th, at East Buffalo, a load of Canadian grass steers, weighing the magnificent average of 1,463 pounds, were sold on the market by Clay, Robinson & Company at the record price of $8.25 per 100 pounds.

Seeding to Grass and Clover.

Bulletin No. 3, issued by the Agricultural Service Bureau of the American Agricultural Chemical Company, is by Dr. H. J. Wheeler, and is a convincing demonstration of the value of thorough tillage and the use of commercial fertilizer. It did not reach us in time to be mentioned in our earlier editions at the most seasonable time, but it contains such valuable instruction in regard to fall and winter work we advise our readers to send for it. The chapter upon the kinds of seeds and rates per acre is alone worth obtaining the bulletin for. A copy of this Bulletin No. 3, entitled "Seeding to Grass and Clover," can be had by writing to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., that establishment being a branch of the American Agricultural Chemical Company.

CHICAGO INTERNATIONAL.

The Greatest and Best Live Stock Show and the Most Glorious Entertainment Each Evening of the Week.

This year the Chicago International Live Stock Exposition opens on Saturday, November 29th, and continues until Saturday, December 6th. At the Exposition there will be four public sales of pure-bred cattle, the dates being advertised on the first page of this paper. There are many good features to this wonderful Exposition, and every year more are added in matters of exhibits, prizes, classes, conventions, etc.

This is the Fourteenth Show, and it is also the fourteenth year of The National Farmer and Stock Grower. We therefore take more than a passing interest in the International Live Stock Exposition, and we cannot see how any stockman can deny himself the pleasure and instruction to be obtained by attending the show.

The exhibit of fat cattle, hogs, sheep and horses are alone a revelation. The stockman who has seen the grand champions of the International is himself become a competent judge of live stock, and, no matter where he goes thereafter, he carries with him the sense of quality and condition that is perfection in domestic live stock raising, and no one can take it away.

The car-load lots appeal to the practical feeder as nothing else will. Chicago is no experimental establishment, but the consensus of judgment is found there and the offerings are superlative, being the leading champions after they have been sorted over and over again at other great Shows and Expositions.

With a seat in the grand pavilion night after night you can review all the creme de la creme of horse perfection. The entire cattle exhibit is paraded before you. Some one else is doing the work, not for profit, but for the benefit of the greatest live stock country, and in going to the International Live Stock Exposition and supporting it, in addition to the education and pleasure experienced, there is also the consciousness of a duty well done because it is just as much the duty of the stock grower to attend the show as it is for the managers to keep up and improve upon the performances of former years. Do not fail to attend the International. You will never regret it.

HERCULES STUMP PULLER.

Many Subscribers Testify to the Value and Usefulness of the Invention.

For several years the Hercules Stump Puller has been advertised in these columns. Last spring a number of those who bought them sent letters commending the Hercules as being all that is claimed for it. The last one we received was dated Pleasant Hill, N. C., April 18, 1893, was signed R. A. Moore, and he said:

"Yours received some time ago and I am sorry I have neglected to answer giving the desired information. Yes, I am glad to say I own a Hercules Stump Puller and it has given entire satisfaction. It has done work that it wasn't recommended to do. I have pulled stumps of a much larger size than this No. 2 double power machine was said to be able to pull. I happened with the luck to break a piece of this machine. I wrote the factory and it was replaced free of cost, except freight. I can fully recommend a Hercules to anyone that has stumps in the way. It's a sure way of ridding your field of such pests." See page 21 and answer the advertisement.

Cattle to Come From Brazil.

Richard Walsh, for many years manager of the Adair Ranch, in the Panhandle of Texas, and who is now establishing a ranch in South America, being interviewed at Kansas City on the subject of the beef supply, gave it as his opinion that the two great sources of beef supply of the future will be Brazil, in South America, and Rhodesia, South Africa. He said: "In five years millions of beeves will come from Brazil. None of the packers of America has a dollar invested in Brazil or Rhodesia, and companies which are establishing ranches and packing houses there will compete with the packers of the United States."

The Farmers' and Shippers' Directory of Business Interests.

A NEW PUBLICATION BY THE HALE PUBLISHING CO., OF ST. LOUIS, MO.—CORRECTED, ENLARGED AND ISSUED FREQUENTLY —PRICE ONLY 50 CENTS A COPY.

NEW EDITION, DATED OCTOBER 1st, NOW READY AND MAILED IMMEDIATELY ON RECEIPT OF ORDER.

THE FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS is designed to contain the name, occupation and business address of all the firms engaged in such business, that their names, address and line of goods manufactured or handled may be of value to general grain farmers, stock raisers, ranchmen, dairymen, fruit and vegetable growers, poultry and bee keepers, and all others engaged in agricultural pursuits or in handling farm products. The book is arranged by states and all the names and addresses are in alphabetical order.

INDUSTRIES INCLUDED IN THE BOOK.

The list includes an alphabetical arrangement of names, addresses and occupations of individuals and firms representing the following industries:

Agricultural Books and Charts—Agricultural Implements—Arms and Ammunition—Auctioneers, Live Stock—Beekeepers' Supplies—Building and Construction—Cattle Troughs, Self-feeders—Cisterns and Tanks—Colonization Companies—Commission Agents, Cotton and Wool—Commission Agents, Dressed Meats—Commission Agents, Cattle, Hog and Sheep—Commission Agents, Hay, Grain and Seed—Commission Salesmen, Butter, Cheese, Eggs, Poultry and Produce—Commission Agents, Horse and Mule—Co-operative Associations—Cotton-ginning Machinery—Creameries and Dairy Distributers—Dairy Apparatus—Dynamite and Blasting Powders—Electric Farm Appliances—Engines For Farms—Experts, Farm Specialties—Farm Chemicals and Sprays—Farm Books and Papers—Farm Tools and Hardware—Fencing, Farm and Ranch—Fertilizer Manufacturers—Fruit Specialists—Grain Elevators and Graders—Harness and Saddles—Horse Goods—Horse and Mule Dealers—Incubators and Brooders—Irrigation Plants and Machinery—Live Stock Dealers—Merchants, Farm Goods—Motor Cars and Trucks—Nurserymen and Florists—Packers, Abattoirs and Wholesale Butchers—Paints and Varnish—Poultry Supplies—Printers, Fruit and Package Labels—Purchasing Agents, Cattle, Hogs and Sheep—Road Machines—Roofing—Sale Stables—Seed Growers and Dealers—Sheep Dips and Specialties—Stock Foods and Tonics—Stock Yards and Markets—Stump Pullers—Swine Breeders' Goods—Tractors, Farm—Trade Publications—Vegetable and Fruit Packages—Vehicles and Harness—Veterinary Appliances—Water Engines and Powers—Water Systems—Well-drilling Tools—Windmills and Engines—and all other industries having business connections with the farm interests of the country.

WHAT THE OCTOBER EDITION DOES CONTAIN.

The October Edition contains by actual count Three Thousand Seven Hundred and Seven (3,707) such names and addresses, with particulars following, stating their occupation. Fifty-two pages are devoted to the State Lists. SEND US FIFTY (50) CENTS FOR A COPY OF THE OCTOBER NUMBER, or you can get the book as a subscription premium.

Special Note.—We will furnish our monthly NATIONAL FARMER AND STOCK GROWER for two years and one copy of the FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS for one dollar.

FARM AND RANCH LANDS.

ALABAMA.—Fertile prairie land near railroad town. Good for all kinds of farming and finest of stock countries. Buy from owner and save commission. State number acres wanted. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Look on page 18 for the advertisement of the lands on the Cotton Belt Route. The land of peanuts and pork. Simple agriculture that pays the way and earns the money with which to purchase and build comfortable homes. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for the Arkansas Booklet.

ARKANSAS LAND FREE.—500,000 acres government land now open to settlement. Guide Book with lists, laws, etc., 25c. Township map of state 25c. additional. **L. E. Moore, Little Rock, Ark.**

ARKANSAS.—For cheap lands in healthy, well-watered districts, no swamps or rocks, where we grow most everything. One eighty-acre farm, fifty acres in cultivation, four-room house, six-stall barn, 700 young bearing peach trees. Price, $1,200 cash for quick sale. Also 160 acres, unimproved, much small, good timber, only one mile from station; good investment; no trading; $8.00 per acre. **A. P. Dyke,** Hope, Ark. Note.—Hope is in Hempstead county, at the junction of four railroads.

CANADIAN FARMS.—Canada offers to working farmers great advantages for settlement. Get your Canadian Home from the Canadian Pacific. Long time loans are made to enable you to pay for land and improvements. Lands near the Canadian Pacific are unsurpassed in fertility. Write for illustrated booklets. Address, **C. M. Thornton,** Colonization Agent, 112 West Adams street, Chicago, Ill.

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

NEW YORK.—150 acres level, rich loam; good buildings; adjoins village. $9,750, including stock, crops, tools. Only $1,500 down. Catalogue free. **Geneva Farm Co.,** Geneva, N. Y.

TEXAS.—Northwest Texas, the shallow-water country, that can easily be irrigated. See the story on page 5 and send to **C. L. Seagraves,** 2516 Railway Exchange, Chicago, Ill., and ask for the "Northwest Texas" Folder.

TEXAS.—Lands on the Cotton Belt Route in Texas are highly productive, in law-abiding communities, made rich by fruit and vegetable farming and stock raising. Good lands yet to be had cheap, but not for long, for prices are advancing. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for Texas Booklet of Low-rate Excursions.

VIRGINIA.—CATTLE CAN GRAZE IN VIRGINIA almost every day in the year. Little snow; abundant rainfall. Ideal climate for dairying, stock, fruit or general farming. Good farm lands $15 an acre up. Write for information. **F. H. LaBaume,** Agl. Agt., Norfolk & Western Ry., Room 257, N. & W. Bldg., Roanoke, Va.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Bldg., Chicago.**

COMING EVENTS.

Important Meetings and Public Sales to Which Attention is Invited.

The Breeders' Horse Sale, conducted by C. W. Hurt, Manager, and D. Augstin, President, at Bloomington, Ill., will be held January 27th to 30th, 1914, when 450 horses will be sold at auction. This sale is patronized by many of the leading breeders of Illinois, and includes imported draft horses brought over specially for the sale. Anyone who desires to include horses in the sale should address C. W. Hurt, Manager, Arrowsmith, Ill.

Mr. W. F. Shade, Cape Girardeau, Mo., breeder of jacks and jennets, has requested us to mention the date for his annual sale, which will take place Tuesday, February 11th, 1914.

The annual sale of imported Shire mares by Trumans' Pioneer Stud Farm will be held at Bushnell, Ill., on December 11th, 1913. This is one of the most important sales of draft horses held during the year.

At the International Live Stock Exposition at Chicago, Ill., this year, on Tuesday, December 2d, at 1 p. m., fifty head of choice Galloway cattle will be sold at auction. For catalogues of these fine Galloways and full particulars concerning them address R. W. Brown, Carrollton, Mo.

Mr. Charles Gray, Secretary of the American Aberdeen-Angus Cattle Association, Union Stock Yards, Chicago, Ill., will be glad to send catalogues of the cattle to be sold at Chicago on December 3d, when fifty high-class Aberdeen-Angus cattle will be sold at auction. This is a very important sale and the offerings will be an exhibition of themselves.

Fifty head of pure-bred and registered Shorthorn cattle will be sold at auction on December 4th, during the International Live Stock Exposition at Chicago, Ill. The sale will be held under the auspices of the Shorthorn Cattle Breeders' Association, and catalogues can be had in advance of the sale by writing to Abram Renick, Union Stock Yards, Chicago, Ill.

Prof. R. J. Kinzer, 1012 Baltimore avenue, Kansas City, Mo., will be glad to send catalogues of the Hereford cattle sale to be held at the International Live Stock Exposition, Chicago, Ill., on Friday, December 5th, 1913. This sale will include a magnificent offering of Herefords, and should be largely attended.

The Poultry Show of the Mississippi Valley Poultry Association will be held at the Coliseum, St. Louis, Mo., Thanksgiving week, from November 25th to December 1st. Henry Steinmesch, Secretary, expects 3,500 birds on display, for which $5,000 in prizes are offered. Prof. Rice, of Cornell University, the highest authority on poultry raising in the United States, will be the principal lecturer at the show. R. C. Lawry, of the Yesterlaid Egg Farm; George Beuoy, a specialist in caponizing; and T. E. Quisenberry, of Mountain Grove, Mo., Secretary of the State Poultry Board, also will lecture. Mr. Quisenberry will show by moving pictures the experimental farm conducted by the state at Mountain Grove, and will show views of poultry plants in California, Oregon and Washington.

POLAND-CHINA PUBLIC SALE.

An Important Event Set For November 22d at Marmaduke, Greene County, Arkansas.

Especial attention is invited to the public sale of eighty Poland-China hogs and two stallions to be sold by Wilder Carpenter at Marmaduke, Ark., on Saturday, November 22d.

The Poland-Chinas to be sold are of families that have kept the Poland-China hog to the front of the useful breeds that help a stock farmer to obtain the top price whenever they are sold at the big markets. Hog improvement pays more than any other improvement on the farm. Common hogs weighing two hundred pounds, as large and as fat as they can grow in eighteen months, will sell for $7.50 per 100 pounds, where grade Poland-Chinas of heavier weight, less than nine months old, and weighing 250 pounds, will sell at $8.50 and top the market, and when they are driven to the scales and to the slaughter house the people point at them, saying: "These are the kind to make buyers run after them." With an experience of twenty years as a live stock reporter the writer of this article never saw a fine load of grade Poland-Chinas that did not sell way up in market prices, and especially at times when common hogs are selling very low.

The hogs to be offered at public sale at Marmaduke, Ark., would be looked on with favor at sales in Illinois and Iowa, and that is the highest praise.

In his own breeding Mr. Carpenter always went to the top to buy a boar. His Carpenter's Master Meddler was bred by Frank D. Winn, of Randolph, Mo., and is a direct descendant from the Meddler that was grand champion at the St. Louis World's Fair. At eight months Carpenter's Master Meddler actually weighed 290 pounds in breeding condition; measured fifty-one inches heart and flank and eight-inch bone. The dams of the pigs offered for sale are of equally superior breding and sired by S. and S. Perfection, Missouri Perfection, Carpenter's Perfection, Foster's Challenger, Warrior, Comptroller and others.

Another boar, sire of pigs to be sold, is Orion, a grandson of Keepsake and Blood Royal, sired by Orient. Orient sired Chas. E. Keller's great show boar, Orient Keep On. Orion is much like his sire and has sired some of the best show hogs the world has ever known. J. E. Meharry paid $320 for Orient, 2d, out of Orient and Blood Royal's sister. Link Lukens, a great hog breeder, thinks this is the greatest strain of hogs that ever lived. The dams of these hogs are those big, mellow kind that weigh 400 to 500 pounds and sired by such boars as Dreadnaught, Dreamer, Achievement, Banker and Electrifier. All of these pigs were sired by this boar Orion.

In recent years Arkansas has been coming to the front as a breeding state, and a few swine breeders of Greene county caused much of this improvement. Just now we all know that there is a shortage in meat. In beef we may have competition from Argentine and from Australia, but we have no expectation that there will be any importations of either salt or fresh pork that will disturb anybody raising hogs. We must therefore raise hogs and raise them of good quality so that they can be matured early, raised cheaply and fattened quickly, thereby turning our feed into money at the earliest possible moment.

Greatest

Cream Separator Offer

Genuine Melotte Cream Separator—famous French-Belgium machine prize winner all over Europe, now offered in America for first time. On a simply staggering offer no manufacturer ever dared make before. Tariff reduction means lowest price ever made on this machine. The machine with the self-balanced bowl overhead machinery inside of bowl made of white enamel. One machine in factory at Remicourt has run an equivalent of 65 years of farm work. Write at once for the big offer.

World's Greatest Prize Winner

Free Trial!

An absolutely genuine free trial. Sent to you without a penny down. Test the Melotte and compare it with any other American or foreign machine. Keep it 30 days without paying us a cent. Then if you don't like it send it back at our expense—that's all. A liberal open-handed offer with no "ifs" or "buts". And remember, we don't want anything out of you first.

Sent Without a Penny Down

Write Today for the valuable book, "Profitable Dairying," sent free—also our beautiful, new catalog describing the Melotte and giving details of this sensational offer.

SASKATCHEWAN
Western Canada

160 ACRE FARMS IN WESTERN CANADA FREE

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

Signs of Pregnancy in Animals.

It is sometimes of considerable importance to a farmer to know whether or not a mate cow or sow is pregnant, since her greatest care and value may depend upon this point.

There are certain signs evidenced by pregnant animals that may be observed with more or less satisfaction. One of the earliest of these is the cessation of heat, although some pregnant females may continue to show estrum at regular periods for months after conception. Most females become tranquil, tend to fatten, the abdomen enlarges and cows giving milk tend to give less. In animals pregnant the first time the udder enlarges soon after conception, loses its wrinkles, becomes firm to the teat, and the teats become more visible.

In the last weeks of pregnancy, there forms at the opening of the teat a white opaque substance called wax. Numerous tests have been invented for determination of pregnancy, but few of them are reliable.

After the third month of gestation, pregnancy may be certainly diagnosed by palpitation through the walls of the rectum. This should only be done, however, by some one perfectly familiar with the procedure, since very severe accidents have resulted from manipulations at the hands of untrained persons.

The following method is said to have been practiced in India for ages. A drop of milk from the animal under consideration is dropped from a clean straw into a tumbler of water. If the cow is not with calf, the milk at once mixes with the water with a flocculent cloudiness. If she is pregnant, the drop falls to the bottom of the glass, hardly mixing.

Manipulations through the walls of the abdomen to ascertain the presence of the fetus do not yield equally certain results in all domestic animals. In small species, such as a dog and cat, this method is very effective from the middle period of gestation onwards. In larger animals the results are not so satisfactory.

In the cow, after the fifth or sixth month, the presence of the fetus can be readily ascertained by pressing the hand into the right side, permitting the fetus to swing and gently strike the hand. After the fifth or sixth month, movements of the foal may be seen by watching the left side of the mare. The pulse of the fetus can only be heard by the aid of a very sensitive instrument.—H. E. Kingman, Veterinary Department, Colorado Agricultural College.

DANGEROUS FEEDING.

Turning Cattle Into Fields With Standing Corn Stalks, Which Should Be Cut, Cured and Fed in the Barnyard.

Farmers in the corn belt, especially in the middle and upper Mississippi Valley, have at various periods experienced loss of cattle pastured on standing corn stalks after the corn has been harvested in the autumn.

An element of mystery has surrounded the death of cattle in these instances. The disease is characterized by a very rapid course; in fact, very commonly there are no premonitory symptoms and it is not unusual for the owner upon visiting the field in the morning to find one or more fat cattle dead which on the previous evening were apparently in excellent health.

Another peculiarity of the disease is that losses may occur on one farm or in one field while cattle on an adjoining farm or in an adjacent field may be free from the affection.

Various investigators in the past have attempted to discover some germ or organism or some toxic substance which might be determined as the cause of this condition, but thus far the cause of the disease has not been established.

As death of stock from this affection is generally sudden and there is little opportunity for treatment, animals should not be turned into a field with standing stalks.

As a matter of fact, the disease may be actually prevented by cutting the stalks early and only feeding them after they have been carefully cured and removed from the field. Losses from feeding on standing corn stalks emphasize the economic value of cutting the corn and feeding the stalks in the barnyard or corral; or, better still, shredding the dry stalks, under which condition they may be fed with the least possible waste.

The so-called corn-stalk disease should not be confused with poisoning from eating sorghum. Deaths among stock from eating sorghum have been traced to prussic acid poisoning, which poison the sorghum under certain conditions of growth has been found to contain in combination.—The foregoing article is from the Office of Information, United States Department of Agriculture.

Healthy Feet are Happy Feet

One great concern of the careful parent is the choice of healthful shoes for little growing feet. "Why didn't they take better care of my feet" will never be said of parents who bring up their children in

NINE O'CLOCK SCHOOL SHOES

They are made, first, over natural foot-form lasts that give right guidance to the position of the feet and ankles in standing, walking or running.

Then there is increased length of wear on account of extra precautions taken in building them, which make Nine O'clock the most economical shoes you can get.

MANUFACTURERS ST LOUIS

MEXICAN CATTLE

Cost Just as Much Money After the Duty Was Removed—The Mexicans Put Up the Price.

The high cost of living will not be reduced by the cattle that were admitted from Mexico when the duty was removed by the law. Many thousands of cattle had been on the border awaiting the time when they could be admitted duty free. They were held in Mexico, and when the duty was removed they crossed over the border; but the market for Mexican cattle was higher, and those who held them in Mexico simply put up the price; and the duty that was taken off in order to cheapen meat in the big cities of the United States cost the buyer just the same as formerly. Congress presented the duty to the holders of Mexican cattle and not to the so-called consumer in the United States. Mexico will not sell cheaper cattle to the United States. Like the Brazilian speculators and coffee growers absorbed the duty on coffee, so did the Mexican holders of cattle absorb the duties that formerly went to the support of the United States government.

Government Beef Figures.

The slaughter of beef under government inspection, which covers more than half of the total slaughter of the country, shows a steady falling off since 1910, the total decline amounting to over 800,000 carcasses, equivalent to about 450,000,000 pounds of dressed beef. Applying the ratio of federally-inspected slaughter to total slaughter according to the census figures for 1909, this means a falling off of 1,419,000 cattle, or approximately 780,000,000 pounds of beef in the entire slaughter of the country from 1910 to 1913.

When these figures are thoroughly understood by ranchmen and stock farmers they will quietly go on with their business of cattle raising and cattle feeding and produce as much beef as they possibly can. It will be a long time before the beloved consumer gets any retail reductions in the cost of living by reason of any abundance of cheap meats. The Argentine packers raised the price of hides to absorb the 15 per cent. that they were presented with by Congress, and no doubt they can do the the same with beef. The Argentine people are just as smart as the Mexicans, who have raised the price of cattle since the American buyer has no duty to pay.

"Books, like friends, should be few and well chosen."—Joineriana.

MILK-HOUSE PROBLEMS.

Exclusive Milk Houses—Best Arrangement For Storing Milk—Temperature Requirements.

As the writer has traveled around among farms devoted to milk production, he has not failed to note the large increase from year to year of milk houses especially constructed for that purpose. Makeshifts are giving way to small houses built for the keeping of milk and for nothing else.

In the great dairy districts these houses, many of them, have running water as a part of their equipment, the water coming either from an artesian well or from a raised tank, giving sufficient fall to cause a constant change of the water.

The separate building is by far the best of any of the arrangements for storing milk, as it gets it away from all odors of the barns or stables. Even the house cellar is not so good, for the reason that many kinds of vegetables are stored in cellars and these often have a strong odor, or decay, and produce still more objectionable smells.

As is well known, milk easily and continually absorbs odors, which reappear later in the cream and butter. The absence of these odors is what makes a good-flavored butter. Therefore, to get away from all odors is a very important step. The separate milk house does this. Since it is to be built by itself, it should be placed as far from other structures as possible, except the neighboring edifice be the family residence. Even then it should be so placed that it will not get the odors from the kitchen.

Cement is the substance now being everywhere used for milk-house floors. It is the only thing that can be thoroughly cleaned with hot water and not deteriorate. Even then the cement must be of good quality, not to crumble under the effect of the acids of the milk and the hot water. But keeping it absolutely clean is a necessity. Wood would rot, and therefore should not be used for floors or any part of the milk house that is frequently wet.

Ventilation is generally perfect, as this is a necessity, and the size of the building is so small that the ventilation is easily secured. The light is quite important, but not so much as the ventilation. An abundance of light helps to dry out the floors and washed parts, and light is a germicide.

So far as the writer notices, few of these milk houses have screens, but screens are being prescribd by some of the rules of the big establishments that buy milk and by some of the regulations issued by State Boards of Health. In fly time the screen is very important. The milk is uncovered when being aerated, and if flies are about, dangerous disease germs may be left by them where they will get into the milk. Sometimes a fly loaded with germs drops into a can of milk. In one milk-bottling establishment connected with a dairy, where no screens are used, the writer noticed several flies drop into the milk and go into milk in bottles. The disease germs carried by those flies, if there were any, would have a fine medium in which to multiply before they were taken into the stomachs of the people.

Every milk house should have connected with it a well at least fifty feet deep, to insure it a supply of water at 55 degrees or below. About that temperature of water can be obtained from wells fifty to one hundred feet deep in most localities on a parallel with Northern Missouri. Farther north the ground temperature below twenty feet from the surfaces will be still lower.

South Bend, Ind.

DAIRY AND CREAMERY.

During the month of August, 1913, 3,725,431 pounds of cheese were imported; also 60,825 pounds of butter and 216,222 gallons of cream. All paid duty under the old tariff law.

Not for some time will there be any great increase of butter importations on account of the reduced import duty, yet preparations are being made for shipments to the United States from other countries, and that will require increased refrigerator space yet to be provided.

The speedometer attachment of the cream separator was exhibited by the Stewart, Warner Speedometer Corporation at the National Dairy Show.

One hundred and nine different exhibitors had displays of implements, apparatus or products at the National Dairy Show.

At the Illinois State Fair the butter exhibit of J. Spohn, of Morrison, Whiteside county, scored the highest, 95.16, with S. Collins, of Round Grove, 94.66, and O. W. Albright, of Scales Mound, 93.66. Two-thirds of the thirty-seven exhibits classed as "extra first."

The National Dairy Show opened on the evening of Thursday, October 23d, with a good attendance and magnificent display of cattle and machinery.

Fifty-one herds of cattle were represented at the National Dairy Show, and the largest number were Guernseys.

The milking machines were being demonstrated daily at the National Dairy Show—the B. L. K., the Sharples and the Empire, the latter for the first time at a national show. The Hinman Milking Machine Company, of Oneida, N. Y., and the Hazlewood Company, of Spokane, Wash., also exhibited milkers.

The average composition of the butter exhibited at the Illinois State Fair was: Moisture, 12.99; fat, 83.99; salt, 2.15; curd, 1.03. Moisture varied from 10.93 to 15.49 per cent.

Eight bulls averaged $87.50 and sixty-eight females averaged $199.70. This was at South Charleston, Ohio, where, on September 25th, R. M. Roberts & Sons held a sale of Holstein cattle.

Clip the Udder.

It is not uncommon among dairy cows to find the udder covered with a dense growth of long hair, which, although they may be of some protection of the udder, nevertheless, from the standpoint of sanitation and comfort to the cow during milking, are a detriment. Under ordinary farm conditions they are generally covered with filth, and even in the best kept dairies, unless clipped, collect some dust and filth. Furthermore, because of their location, it is highly probable that some of them will find their way into the milk-pail during milking. In order that such conditions may not occur these hairs should be clipped close once or twice each year, thereby preventing collection of filth and permitting greater ease in washing the udder.

"It has been my experience that 'kickers' are also developed when breaking heifers to milk because of these long hairs. When the milker grasps the teat during milking, the surrounding hair is included, and with each stream drawn the hairs are given a good, vigorous pull. Is it any wonder that the heifer kicks you, pail and all, into the gutters?

"A common pair of horse-clippers are best suited for the clipping of the hair. If a large herd is to be clipped, a hand-power machine should be provided. The clipping should extend over the flank and thigh on the right side, as this will make it easier to keep the side above the milk-pail clean. In the production of special or certified milk, this precaution should always be observed in addition to the customary washing of udders. In ordinary milk production it will help to eliminate much filth, which means better milk, and better milk eventually means better prices."—By H. K. Dvorachek, Colorado Agricultural College, Fort Collins, Colo.

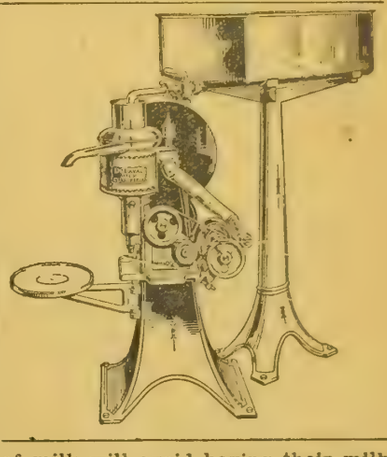
Holstein Cow's Record.

"I am advised by preliminary reports that the Holstein-Friesian cow Crown Princess Maxie DeKol, 2d, 118,991, has broken the record for fat production in the senior four-year class of the thirty-day division, by producing in thirty consecutive days 113.8 pounds fat from 2,588.4 pounds milk. She freshened on September 5th, at the age of four years, ten months, twenty-three days. Her sire is Royalton Johanna DeKol, 44,596; her dam, Crown Princess Maxie DeKol, 90,415. She was bred by Mr. J. S. Clifton, Alvordton, Ohio, and she is now owned by Mr. G. W. Rising, Fayette, Ohio. She displaces Agatha Pontiac,99,818, whose record for thirty days is 112.081 pounds fat from 2,365.5 pounds milk.—Malcolm H. Gardner, Superintendent Advanced Registry."

The DeLaval Milk Clarifier.

A recent invention of considerable value and importance is the milk clarifier placed on the market by the DeLaval Separator Company. It was subject of demonstration at the National Dairy Show and many who looked on were surprised to see how thoroughly it did its work. The action is different (say the opposite) of the cream separator.

The DeLaval Centrifugal Milk Clarifier thoroughly cleanses the milk of all objectionable matter, no matter when or how it found its way into the milk, thereby causing the milk to keep sweet and marketable longer than it would without being clarified. By cooling to such temperature as farmers can control with well or spring water, and by purifying the milk by the clarifier, shippers



of milk will avoid having their milk turn sour before reaching market. The big distributers of milk are putting in power clarifiers as fast as they can get them and hand-driven machines with capacity of 100 to 1,000 pounds per hour are available for farmers and smaller milk dealers. We strongly advise our readers who are interested in milk production to write to the De Laval Cream Separator Company, 165 Broadway, New York, and ask for a catalogue of the farm sizes of milk clarifiers recommended by The National Farmer and Stock Grower.

DE LAVAL
CREAM
SEPARATORS

MAKE FALL AND WINTER DAIRYING MORE PROFITABLE

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one. A De Laval Machine will save its cost by spring, and may be bought on such liberal terms if desired as to actually pay for itself meanwhile.

KANSAS GRASSHOPPERS.

After Fight of Seventeen Years, Dr. S. J. Hunter, State Entomologist, Predicts the End of Them.

After a study of seventeen years on the Kansas grasshopper problem, Dr. S. J. Hunter, State Entomologist, and head of the University of Kansas, Department of Entomology, was able to-day to forecast a victory over the pests. Within two years the native grasshopper will be reduced to a harmless quantity in the southern half of the state, the section under Dr. Hunter's charge.

Discing the ground in the spring to destroy the eggs and distributing poison in the summer to kill the insects is the dual programme outlined for the campaign. Poison used since July on Southern Kansas farms cut down three out of every four hoppers by actual count.

The final war of extermination was made possible by the Board of Administration of Educational Institutions, which approved Dr. Hunter's plan last June and appropriated funds to see him through to the end. The Board recognized the fact that the elimination of the pest would mean a saving of millions to the farming interests of Kansas, and it was anxious to use the State University machinery in this work of salvage.

With the approval of the Board the University opened fire by sending F. W. Classen, H. T. Emery, H. B. Hungerford, E. W. Mellory and D. Isely, Assistant Entomologists, to the various counties to have the commissioners authorize the purchase of poison for use in their district. The majority readily co-operated.

Observation since 1896 had convinced Dr. Hunter and his assistants that the grasshoppers that were injuring Kansas crops did not migrate, so the attack centered on the one idea that the farmer who killed the insects on his own farm would be safe for all time.

"The grasshoppers that do the damage are native," says Dr. Hunter. "That is, they develop and perpetuate themselves on one farm; they do not move about. Of course, no one should confuse these native grasshoppers with the hordes of small red ones that used to sweep down from the north in armies. The latter, raised in arid land, are forced to migrate to obtain food."

In the counties that provided the materials, poison was spread on the farm. The formula used was the following, obtained after years of experimenting: No. 1—2½ pounds Paris green or white arsenic; 50 pounds bran (mix these dry). No. 2—Six oranges or lemons, chopped up fine, rind and all; four quarts syrup; five gallons water (mix these three together thoroughly; mix No. 1 and No. 2, then add sufficient water to make a wet mash).

The lemon and orange in the mixture attracted the grasshoppers, which found it irresistible and deadly. A scientific count completed this month of the insects on the farms that had used poison showed that from two-thirds to three-quarters had been killed; that is, there were from two to three times as many on farms where poison was not used.

The activity of the University will continue until every farm in the south half of the state has used the poison. Two seasons will be enough to eradicate the pest, according to Dr. Hunter.

"If the hoppers are found now attacking the young wheat or the fall growing alfalfa, the bran mash should be used as directed," Dr. Hunter advises. "Every female grasshopper killed now means 100 grasshoppers less next year.

"The alfalfa should be disced and cross harrowed early in the spring as soon as the frost leaves the ground. This throws out the eggs of the grasshoppers to be destroyed by the weather and eaten by the birds. This method of culture, first advocated by the University of Kansas, not only lessens the number of grasshoppers, but also has been proven to increase the yield of the alfalfa fully one-third.

"Scatter the poison, disc the field and say 'Good-bye' to the Kansas grasshopper."

Shipping Sand as Feed.

The United States Department of Agriculture announces the seizure of two shipments of corn chop made on September 27th from Kansas City, Mo., one shipment consisting of 223 bags. This stock feed contained sand as an adulterant.

Snow's Crop Report.

Snow's November report makes the acreage of corn entirely abandoned so far as production of grain in any form is concerned 4,833,000 acres, leaving 102,970,000 acres on which some corn was produced. The yield per acre on the area producing some corn is reported at 23.1 bushels, making a total crop of 2,337,000,000 bushels. The government report indicated a crop of 2,251,000,000 bushels.

The Book of LIVE STOCK CHAMPIONS.

EDITION OF 1912.

NOW READY FOR DELIVERY.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

One Thousand Champions,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in THE BOOK OF LIVE STOCK CHAMPIONS are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

THE BOOK OF LIVE STOCK CHAMPIONS is published as a Souvenir Supplement to THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements.

AN EXTRAORDINARY OFFER.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to THE NATIONAL FARMER AND STOCK GROWER. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. No finer volume was ever offered. Send One Dollar with your order to

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Fur Market at St. Louis.

St. Louis dealers anticipate large shipments of furs later on, especially so for the reason that the United States has transferred the sale of the government skins, pelts and furs from London to St. Louis, and which has served to advertise St. Louis to a remarkable extent.

Lower prices than last season's are anticipated, however, by the trade, but not enough marketable skins selling as yet upon which to base quotations. The following summary shows the price changes on American raw furs at the London sales finished recently: Declines—Muskrat (all kinds), 25 per cent.; raccoon, 20 per cent.; skunk, 20 per cent.; civet, 15 per cent.; opossum, 15 per cent.; mink, 25 per cent.; marten, 30 per cent.; gray fox, 25 per cent.; red fox, 10 per cent.; otter, 25 per cent.; lynx, 30 per cent.; fisher, 20 per cent.; bear, 30 per cent.; beaver, 15 per cent.; ermine, 25 per cent.; wild cat, 30 per cent.; house cat, 20 per cent. Advances—Wolf, 20 per cent.; cross fox, 150 per cent.; silver fox, 40 per cent.; badger and blue and white fox showed no change. At the seal sale Northwest coast and Cape Horn were 25 per cent. higher. Cape of Good Hope, large sizes, 20 per cent. higher; while small sizes were 50 per cent. lower.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd,** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SWINE RAISING.

Sows and Their Litters—Early Maturity Pushed Too Far—Excessive Feeding of Corn—Exercise Desirable.

For the last fifty years the early maturity of swine has been pushed to the front in feeding operations, while other things connected with the production of the pigs have been largely overlooked. In some breeds the time of maturing has been continually shortened, while the size of litters has decreased. So the gain in early maturity has been in some extent offset by the decrease in number of pigs to be matured.

The litters have in some cases become so small that breeders are alarmed and are taking measures to get a larger producing power. It is hard to tell how this can be brought about, if not by a kind of feeding that will cause the pigs to lay on fat less readily.

It is generally noticed that overfatness means lessened breeding power and sometimes no breeding power at all. Several years ago it was declared in a convention of swine men that boars and sows that had been overfattened for exhibition purposes were thereafter of no value for breeding.

If too much fat means too little breeding power, then it is certain that our breeding swine must be fed in a way that will result in only a moderate growth being made. There must be a distinction between the feeding operations for the breeding stock and the feeding arrangements for the swine being fattened for market. This is no new suggestion for our experienced breeders, but is for those that have not made a study of cause and effect in feeding when it is related to breeding.

Probably nothing in the corn belt has been more detrimental to the breeding power of swine than the excessive feeding of corn. This has gone on for so many hog generations that it has induced qualities tending to the laying on of fat at the expense of bone, muscle and breeding power.

More food, such as clover, must be fed and more exercise must be given. Even then it is going to take a long time to get back to the place where each sow will produce ten or more pigs to the six or seven she is producing now. In fact, the sows that are now producing small litters are not likely ever to produce large ones, but their granddaughters may.

A greater variety of food should be fed the brood sows than is generally given. The rations should be so varied that they will give an abundance of the qualities needed in body building. The too-limited ration is the cause of sows having abnormal appetites at the time their pigs are born. Often this has resulted in the sow eating some of her pigs.

One great fault in the handling of the sows and litters is the persistent tendency to give too little chance for exercise, especially in the fall and winter. The Southern razorbacks, which have the run of great plantations, or, at least, great wood lots, produce big litters, and the amount of exercise they have to take to get their food is probably responsible in part for their large ability to produce. Moreover, they do not get a great quantity of starchy food at one time, but a small quantity of food rich in nitrogen.

Points in Favor of Hogs.

"There is no live stock on the farm that can compare with the hog as a money maker. From a bushel of corn a hog will make twice as many pounds of pork as the steer will of beef. Again, the hog will make an annual increase of 500 to 2,000 per cent., while sheep and cattle will run from 60 to 100 per cent. It takes two years for the steer to reach market; a hog gets there in eight months, and sometimes shortens this up to six months, and the hog's economical propensities in converting feed that could not be saved in any other manner places the hog in the front rank as the farmer's money maker."—American Swineherd.

Hog Cholera Report.

The Cincinnati Price Current says that the hog cholera epidemic is severe, one county in Iowa reporting 90 per cent. loss; many 40 and 50 per cent., and the average considerably above 20 per cent. The heaviest percentage of loss seems to be in Iowa, South Dakota and Nebraska. Wisconsin, Kansas and Oklahoma report very small losses. Total slaughterings of hogs in the West from March 1 to date were 15,255,000, compared with 15,175,444 for the corresponding period last year.

Newly-farrowed Sow.

"The condition of the weather will govern the length of time it will be necessary to keep a newly-farrowed sow in close quarters, but she should not be denied access to the open air. Pigs should not be allowed in a cold rain or where they will receive the shock of cold winds. Where they can do so without danger they should be out in the sun within twenty-four hours after birth, and after that the best practice is to let them run in and out at will. Neither the sow nor very young pigs should be permitted to run in pasture early in the morning if the grass is tall and wet with rain or heavy dew.—From Coburn's "Swine in America."

Coburn and Swine.

"In the corn belt most farmers find their abundant and inexpensive corn a feed which cannot be avoided or ignored, nor should it be; but while its use need not by any means be omitted, it should be moderate and as a part of a reasonably balanced ration. Sows kept for breeding should not herd with fattening hogs kept on corn, but be in pasture and given a supply of slop, such as equal parts of shorts, corn meal and wheat bran. Feeds which furnish considerable bulk are preferable, and those tending to prevent constipation are important."—From Coburn's "Swine in America."

First Duty-free Cattle.

On Monday, October 20th, the Chicago market received the first consignment of cattle from Alberta, British Columbia, since the duty was taken off. The shipment was consigned by E. H. Maunsell, of McLeod, Alberta, and 223 head, averaging 1,384 pounds, sold at $8.15 per 100 pounds, a string of ninety heifers, weighing 1,295 pounds, making $7.40 per 100 pounds. Chas. O. Robinson, of Clay, Robinson & Co., sold the cattle.

At a sale of Holstein-Friesian cattle held by Thos. M. Anderson at Leland, Ill., October 14th, the average was $122 for thirty-nine head.

E. Myers, President, E. Myers Lye Company

$26,500,000.00
Hog Cholera Losses In 6 Months

The above is a conservative estimate of the stupendous sum lost by American farmers during the first six months of 1912 from hog cholera alone! (Not including the **enormous loss from hog worms.**)

Now, men, let's make a mighty, united effort to put an end to this terrific slaughter—this awful waste of money. We can do it if we work together. I **know** we can do it. I have the remedy that **has been proved will prevent** hog cholera, put your weak hogs on their feed, **rid them of worms,** make them strong, hearty, fat and healthy. My remedy,

Merry War Powdered Lye,

is very simple and inexpensive to use and results have been **proven.**

In an interview, which was so important that it was given a full column on the front page of the Fort Dodge, Ia., Messenger, on November 7th, 1912, Mr. Collie Bowers, a prominent hog raiser in that section, says: "Last Fall I had lost twenty-six young pigs, when I was told to get some MERRY WAR POWDERED LYE and feed it with swill. Every one of the eight or nine pigs that were then sick recovered and I had no more trouble. This Fall the same sickness started after I began feeding this year's crop. I started the Merry War Lye treatment and the pigs got well. My brother used the Lye with his pigs and saved all the sick ones. Earnest Stromberg heard about the treatment and came to our house in the night to learn how to use it. We told him and he drove to Fort Dodge in the night and got a grocer up to get the MERRY WAR POWDERED LYE. His pigs all got well."

You can easily prevent an outbreak of cholera among **your** hogs, for again I say to you that MERRY WAR POWDERED LYE is the **safe preventive** of that dread swine disease. You can tell your neighbors about it just as Mr. Bowers in this interview is telling his farmer friends about it. You can in this way help to put an end to this needless and enormous money loss. Will you do it?

There Are No Substitutes

Go to your nearest dealer today and get a few cans of MERRY WAR POWDERED LYE. Don't accept an ordinary, old-fashioned lye as a substitute. To use such a lye would be but a doubtful and perhaps a **dangerous** experiment. MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs—that is **not** an experiment. **Insist** on the genuine.

Its wonderful merit has been **proved by experience.** Price only 10c per can **(120 feeds).** It is convenient to buy in case lots, 4 doz. cans, $4.80. If your grocer, druggist or feed dealer can't supply you, write us stating their names. We will see that you are supplied; also send you, **free,** a valuable booklet **"How to Get the Biggest Profits From Hog Raising."**

Order direct from us in case lots 4 doz. cans, $4.80, if your dealers won't supply you.

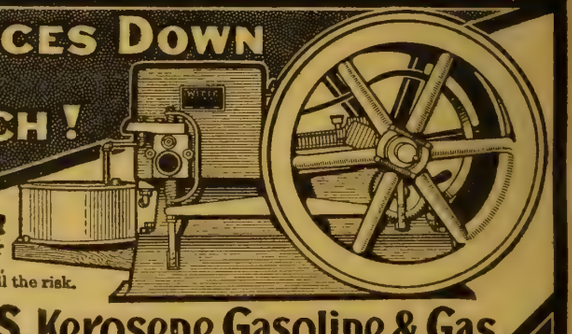
ENGINE PRICES DOWN ANOTHER NOTCH!

Look at these Prices!

2 H-P, $39.45; 4 H-P, $75.50; 6 H-P, $99.35; 8 H-P, $149.90; 11 H-P, $218.90; Other sizes, up to 40 H-P, proportionally low.

Direct from Factory to User!

Why pay two prices for a good engine, or take chances on a poor, or an unknown engine, when the "WITTE" costs so little, and saves you all the risk.



WITTE ENGINES, Kerosene, Gasoline & Gas

Stationary, Portable and Sawrig Styles. **60 DAYS' FREE TRIAL** **CASH OR EASY TERMS.**

LET ME send you a "WITTE" engine to earn its own cost while you pay for it. It's cheaper than doing without one. I have proved that to thousands who are now WITTE users. Ed. H. Witte.

GET your engine from an engine specialist. All my life I have done nothing but make engines. **The success of my customers and nothing else, makes my success.** I've simply got to sell better engines. I can't lose money on an engine and make back the loss on something else. My factory is the only one, that started in the engine business 27 years ago, which has come through successfully under the same management with which it started. Only WITTE engine-quality has made that possible. You know, when you get a "WITTE," that its **5-year guarantee** will be good in the **fifth** year, as well as in the first year, and that the engine will give life-time service.

It is cheaper and easier to own a "WITTE" engine than to do without one. My New Offer makes it easier to get the work done by machinery than by muscle or brute power. No need now to get along without a "WITTE." **New Book Free** My New Book—the finest in the whole engine business—explains all. It tells you how to be sure in your selection, even if you don't pick a "WITTE." Send me your address today, so I can send you this book FREE with my New Offer.

SOUTH AMERICAN MEAT.

Representative of the Department of Agriculture Returns From Tour of Inspection.

The stock-raising and meat industries of South America are well developed and have large possibilities for future extension, according to Dr. A. D. Melvin, Chief of the Bureau of Animal Industry, who has returned from a tour of investigation made by direction of the Secretary of Agriculture.

Dr. Melvin's trip included Argentine, Uruguay and Brazil. In Argentine he inspected all of the establishments preparing beef for export with the exception of one which was not in operation at the time, and visited several large ranches. He also attended the stock shows at Bosario and Palermo, where many very fine animals were exhibited. In Uruguay he visited one of the two large establishments, the other not being in operation. In Brazil he visited Sao Paulo and Rio de Janeiro, where a fine municipal abattoir has recently been completed, at which all of the slaughtering for that city is done. From Sao Paulo he went into the interior country.

Argentine and Uruguay are large exporters of beef and mutton, for which Great Britain is at present their principal customer. Brazil, however, exports no refrigerated beef, although it supplies Central America and Cuba with a considerable quantity of cured beef known as "tasajo" or "jerked beef."

While statistics show that Argentine is already slaughtering up to the limit of its present stock of cattle, Dr. Melvin was impressed with the great resources of that country for cattle raising and believes it will be possible for the stock raisers to bring about a large increase in the meat output if present prices are maintained.

The cattle slaughtered for export in Argentine, Dr. Melvin says, are fed no grain whatever, but are raised and fattened entirely on alfalfa pastures. For the most part the cattle are high-grade stock, the predominating breed being the Durham, with the Hereford ranking second and the Polled Angus third in number. The alfalfa pastures are capable of supporting many more cattle than are the native "camps" or unbroken country. In a general way the cattle raisers estimate on two and one-half acres of pasture per head for growing cattle, and three to three and one-half acres for fattening cattle. These pastures support the cattle the year round without any further feeding except in occasional times of drouth or invasion of locusts.

Alfalfa, he says, is not being grown nearly as extensively as it could be. The extension of its growth he thinks will depend very largely upon the prices that the cattle raisers receive for their cattle. Because of present satisfactory prices the tendency is to convert the grain lands into alfalfa pastures. As cattle raising is a much more certain enterprise than grain growing, the people prefer to raise cattle when the prices are remunerative.

"At the time of my visit," says Dr. Melvin, "cattle that dressed 820 pounds were sold for $74.80 gold. This grade of Argentine beef, which is of a very high quality, is selling in England for from eight to nine cents a pound wholesale. Besides the price received for the meat there is a considerable return from the hide and the offal, and since the entrance of American packers into the South American trade these by-products are being carefully prepared and utilized.

"A very high quality of mutton is also produced in Argentine, but at the time of my visit shipments were scarce, on account of the floods, which were prevalent in the Province of Buenos Ayres and farther south.

"Argentine for many years has been importing the best breeding cattle and sheep from Great Britain and to-day has some of the finest types in the world. Uruguay has a good grade of live stock, but they are not equal to the cattle in the alfalfa region of Argentine."

Dr. Melvin reports that the federal governments of both Argentine and Uruguay maintain veterinary inspection at all of the establishments exporting fresh beef. These establishments are known as "frigorificos." United States packing firms own four of the large plants in these two countries, and the competition between them and the native firms is keen. English capital is also invested in several of the establishments.

Municipal abattoirs with official inspection are maintained very generally at all of the South American cities of any improtance, and in this respect these countries are ahead of the United States. Usually these abattoirs are owned by the municipalities, which conduct the slaughtering and provide the inspectors, charging fees for the service.

The cattle of Brazil, Dr. Melvin says, are not of such good quality as those of Argentine and Uruguay, and the stock is largely mixed with the zebu or East Indian cattle. This strain of blood is very readily seen in most of the Brazilian cattle.

"My Father Put Up That Fence"
—Years Ago.
"SQUARE DEAL FENCE LASTS." Many a young man can look back to the time when his father put up a "SQUARE DEAL" FENCE. They are in evidence today on hundreds of farms. SQUARE DEAL Fences are time-tried and time-tested. They have proven that the SQUARE DEAL LOCK, the one-piece Stay Wires, and the Wavy Strand Wires produce lasting qualities unknown in other fences. We make the wire and we make the fence. We know that it will pay you to investigate SQUARE DEAL Fence, and find out how it is made and why it will cost you less.
Square Deal Fence
Outlasts All Others
—because of its unusual construction. The SQUARE DEAL Lock grips the stay wires above and below each strand wire. The wavy strand wires keep the fence trim and tight summer or winter. The Stay Wires prevent sagging or bagging. They cannot spread. Hogs or pigs cannot lift SQUARE DEAL Fence and crawl under. Any sudden pressure or impact is distributed over a large surface. Knots are smooth and cannot hold water or gather rust. In every rod of SQUARE DEAL Fence there are 33 up-right stay wires six inches apart, extending from top to bottom of fence and each stay wire acts as a post. Costs less for posts. Fence lasts much longer, looks better. Stock cannot break through or get under.
FREE—To every farmer or land owner who wants to learn more about SQUARE DEAL Fence, we will send our SQUARE DEAL catalog and dealer's name and ROPP'S NEW CALCULATOR—worth its weight in gold FREE. Ropp's Calculator will give you the answer to any business problem that arises on the farm. Full of information that will interest. Write today for these free books.

County Cattle Exchange.

In the Press Bulletin of the University of Wisconsin, October 28th, 1913, we find the following:

"Owing to the fact that many farmers and stock raisers have not been able to find a ready sale for bred-for-production bulls for breeding purposes, surplus animals of this sort too frequently have been sacrificed to butchers at beef prices. To counteract this tendency and to provide a market for superior sires, Agricultural Representative F. D. Otis, of Barron county, is urging the organization of a local Live Stock Exchange and is offering the use of his office as the center of sales or a clearing house.

"He states that had there been such an exchange in Barron county the past summer many valuable animals might have been saved. The plan as outlined by Mr. Otis meets the hearty approval of George C. Humphrey, of the College of Agriculture of the University of Wisconsin, who adds that the scheme might be extended in order to include offices of the county representatives, the offices of the various secretaries of community breeders' associations and the office of the secretary of the Wisconsin Live Stock Breeders' Association as well. Only by carefully selecting the best sires and keeping them for breeding purposes can the true type, quality and production of any breed of cattle be maintained. Listing the animals for sale in a Central Exchange would thus do away with the loss that always results when an animal worth from $150 to $200 or more is sold for beef."

FARMERS' AND SHIPPERS' DIRECTORY OF BUSINESS INTERESTS.

October Edition, 1913.

The Directory is fully advertised on page 27 and is a most business-like proposition. It contains by actual count and arranged alphabetically in state lists three thousand seven hundred and seven names of business firms who are all engaged in doing business with the farmer. It is a useful book on any farm, in any state. It is not a complete book, but each name has been collected with the purpose of showing farmers and shippers of farm products a whole lot of valuable information. The booklet also contains about fifty advertisements which simply set forth with greater fullness the occupation of the advertisers.

To Freshen Furs.

To freshen a fur piece that has become flat and worthless, brush it the wrong way with a moist hair brush, continuing this until the fur is entirely dried out again, then beat lightly with a flat beater, never with a rod. Light-colored furs are often benefited by rubbing very thoroughly with dry corn meal, rubbed well in, then carefully brushed and beaten out.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St.Louis. The announcement is made that the Twelfth and Last Range Horse Sale of the season of 1913 is approaching. These sales are held at the St.Louis National Stock Yards and conducted by

Campbell & Reid and Western Sale Stables Co.

At each of these sales Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale ring were originally well-bred Range Horses. The next sale will be held on

Thursday, November 13,

which is the last sale of the season. The demand is good, especially for well-bred Mares and Geldings in fine condition. We will also hold the usual series of sales in the year 1914.

Best Market—Great Salesmen.

The remarkable success of the Monday and Tuesday auctions of horses at the St. Louis National Stock Yards was in evidence when for the first sale in November the arrivals of horses and mules were 2,100 head. These Monday and Tuesday sales are conducted with lightning rapidity, and the auction ring is kept full of buyers. Holland, Nugent & Maxwell Bros. conduct these sales and also keep busy selling mules. Any shipper of horses to any other market can better his average net results by getting into communication with T. H. Holland, care of Holland, Nugent & Maxwell Bros. Commission Company, National Stock Yards, Ill.

Fat Mohair Goats.

In the reports of the St. Louis markets as published by the National Live Stock Reporter, we find that on October 30th G. A. Wahl marketed from his farm at Warrenton, Mo., two loads of good, fat goats that weighed ninety-three pounds and sold at $4.25 per 100 pounds. These goats were well-bred Angoras. Mr. Wahl went to Texas some time ago and secured 3,000 of these goats to clean up the brush on his place. They come from stock imported a few years ago at a cost of several hundred dollars per head. Mr. Wahl was highly pleased with the price he received for his goats, and he was fortunate for the reason that the highest-priced mutton that day was $4.65 per 100 pounds.

HAY MARKET AT ST. LOUIS.

Being a Statement of Actual Sales at the Beginning of November.

Sales on St. Louis Side: Clover—Part car common threshed at $10; one car and part car common heavy mixed at $13; two cars and part car (stained) No. 2 heavy mixed at $14; one car No. 2 do. at $14.50; one car No. 1 heavy mixed at $15; one car part heavy clover mixed and part timothy at $15; four cars No. 2 light mixed at $16; three do. do. at $16.50; three cars No. 1 light mixed at $17; two do. at $17.50; one do. do. at $18.

Timothy—One car threshed at $11; part car No. 3 at $14.50; one car common No. 2 at $15; one car No. 2 at $17; one car scant No. 1 at $18; one do. do. at $18.50; two cars No. 1 at $19; part car do. at $19.50; two do. at $20; one car good No. 1 at $21; one car choice at $21.50.

Prairie.—One car common Nebraka at $12; No. 1 to choice Western salable at $18 to $20.

Clover.—One car common No. 2 at $12; No. 1 to choice quotable at $15.50 to $17.

Alfalfa.—Two cars scant No. 2 at $12.50; one car No. 2 at $13.50; two do. at $14; one good No. 2 at $15; three cars No. 1 at $17; one car do. at $18; one car high No. 1 to choice at $19.50.

On East Side: One car No. 2 light clover mixed at $18, delivered to St. Louis. Timothy.—One car No. 1 at $20, delivered to St. Louis; one car choice at $22, do.

Straw.—Sales of two cars wheat straw at $6.75.

A Trotting World Record.

The feature of the Lexington, Ky., meeting was the performance of Peter Volo, which won the two-year-old division of the Kentucky Futurity, and in the second heat placed the world's record for two-year-olds at 2:04½. The day was right for record-breaking and so was the young son of Peter the Great. Murphy waited for the second heat to turn the trick and drove the youngster's well-rated mile. He was at the quarter in 31¼ seconds, and to the half in 1:02½. It was at this part of the mile that the good filly, Lady Wanetka, got into the game and she forced the colt to trot the next quarter in 30½ seconds, the three-quarters being reached in 1:33. In the last 100 yards the colt drew away from Lady Wanetka and went under the wire in 2:04½—the fastest mile ever trotted by a trotter of his age. Four years ago Murphy set the trotting horse world in a whirl when he piloted the two-year-old filly, Native Belle, a mile in 2:07¾—a record which had stood until Peter Volo went his mile in 2:06¼ at Columbus.

Horse Market Quotations.

Horses are bought to sell again, and quotations of horse prices are simply averages in their classes. The quotations at the St. Louis National Stock Yards, October 31st, were as follows: Heavy draft, extra, $240 to $275; heavy draft, fair to good, $175 to $200; Eastern chunks, extra quality, $160 to $225; Eastern chunks, plain, $100 to $135; Southern horses, extra quality, $125 to $150; Southern horses, plain to good, $50 to $95; choice drivers, with speed, $175 to $275; saddlers, $150 to $250; plugs, $15 to $45.

Retal Prices of Fruits.

A St. Louis paper, the Star, has the following to report about retail prices:

"Apples of all varieties will remain high, and the fancy grades of the fruit are higher than ever before known. The prevailing prices are: Washington Stark, 80 cents to $2.20 a dozen; Black Calmar, $1.25 a dozen; Arkansas Black, 75 cents to $1.00 a dozen; Spitzenberger, 75 cents to $1.00 a dozen; Aristo Black, 75 cents to $1.00 a dozen; Jonathan, 40 to 50 cents a dozen; Grimes' Golden, 50 cents a dozen; York Imperial, 60 cents a peck; and Ben Davis, 25 cents a peck.

"A few peaches are yet to be had at 50 cents a dozen. French Endines are 40 cents a pound; new Turkish figs, 15 to 30 cents a pound; Persian dates, 10 to 15 cents a pound; pecans, 50 cents a pound, and getting cheaper; hazelnuts, 10, 15 and 20 cents a pound; Malaga grapes, 25 cents a pound; pomogranates, 10 cents each; grape fruit, 10 to 25 cents; chestnuts, 12 cents a pound; Japanese persimmons, 10 cents each; Concord grapes, 10 cents a basket.

"Cranberries are more plentiful than usual, and the Cape Cod variety of good quality is selling at 8 cents a quart. Pumpkins are plentiful at 1½ to 2 cents a pound. Pickled pears are 5 cents apiece."

New Jersey Horse Breeding.

The state of New Jersey owns thirteen stallions in public service in farming communities, and three hundred mares were mated during the year, the service fee being $10. The stallions are moved from a given section wherever privately-owned stallions of equal merit are available on reasonable terms.

Northwest Texas.

Northwest Texas is a great country and the Santa Fe Railway has considerable mileage there. That country can only be filled up once, and they are fortunate farmers who first get a foothold. See page 6 under the title "Enrich Yourself."

"World's Best Workshoe"
1914 Model
Will Save Millions for Workers

FREE
By Parcels Post
10-Day Try-on

I Just Spent $50,000 To Improve My "Steels"

I know and every wearer of my steels knows they always have been the "World's Best Workshoe"—the best shoe for every farmer, mechanic, laborer, miner, hunter—man or boy. Thousands have been pleased—you will be more than pleased with my new, improved, better-fitting, better-feeling, better service 1914 Model "Steels".

Leather work shoes are heavy, clumsy, shapeless, as compared with my "steels". My "steels" never get sloppy or out of shape. You pay less for my "steels"—then they outwear 3 to 6 pairs of leather shoes and save $10 to $20 on your yearly shoe bills.

Health—Comfort—Economy

My "steels" are good health shoes. They are waterproof. Stop colds, pneumonia, rheumatism and other "wet-foot" troubles. Stop corns, bunions, callouses, blisters, flat-foot, broken arch and the like. My "steels" are firm, restful, light, damp-proof. They keep your feet in best condition. I can and will prove all this to your satisfaction. My "steels" are an absolute necessity to any out-door man.

Write For Free Book

It describes my "Steels"—tells why they are lighter, better, more comfortable, safe and economical for you than any other work-shoe—why they outwear 3 to 6 pairs of the best all-leather shoes—why "Ruthstein's Steels" save your feet, your health, your money.

$10,000,000 A Year Wasted On Trusses

Wrong to Buy Anything For Rupture Without Getting Sixty Days Trial

A conservative estimate shows that nearly ten million dollars a year—in this country alone—is practically wasted on worthless rupture appliances—all because people trust to a mere try-on instead of making a thorough test.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial — the only thing we know of good enough to stand such a long and thorough test. It's the famous Clutbe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times —including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drug-stores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—ClutheCo., 125 E. 23rd St., New York City

Clipping the Horse.

"The subject of clipping the horse is a matter of considerable discussion at this time of the year. The following suggestions may be of benefit to those who are contemplating clipping their horses: In the first place, never clip a horse that has a fine coat of hair, as it will then be necessary to clip it every spring and fall thereafter. The only horses that should be clipped are those with heavy coats, that can be cared for during the winter, such as blanketing warmly in the stable and covering with a canvas sheet during severe storms while at work. The advantage in clipping a horse is that the long-haired horse, after sweating profusely, will not dry off during the night. This condition will cause the horse to take cold, the inflammation being located in the nose, throat or lungs. It would not be a good policy to clip a horse and then turn it out to a straw pile for the winter. Clipped horses should never be allowed to stand uncovered, as they chill quickly. A clipped horse dries off readily, mud is easily removed from the legs, and there is no disagreeable hair flying during the period of shedding. In the fall, clip as soon as the flies do not bite the animal; while in the spring, clip before the horse begins to shed."—C. H. Barnes, Colorado Agricultural College, Fort Collins, Colorada.

Hog Prices October 31st.

At the St. Louis National Stock Yards, October 31st, the top of the market was $8.20 per 100 pounds for choice hogs weighing 220 to 300 pounds. Hogs with plenty of quality and weight went to the shippers and butchers at $8.05 to $8.15, while the packers purchased a pretty good class of hogs at $7.85 to $8.10, and fair grades at $7.60 to $7.85, and the rough, throw-out, heavy packers at $7.60 to $7.75. A good grade of light-weights under 165 pounds sold at $7.75 to $8.00; fair grades went at $7.35 to $7.65; best quality pigs weighing less than 125 pounds sold at $7.25 to $7.50; fair to medium grades brought $6.50 to $7.25; and the poorer kinds, $5.50 to $6.25 per 100 pounds.

The Top Sheep and Lambs.

J. T. Rigsby, a regular shipper to the St. Louis market for many years from Macoupin county, Ill., had in seventy-eight head of lambs that sold at $7.75 per 100 pounds, which was the top of the market and the only lambs to bring the price in several weeks. He also marketed sheep at $4.65, which was the top on sheep. This was on the last day of October.

Marketing of Live Stock.

On October 31st, the end of ten-months' business of the year 1913, the National Live Stock Reporter said: "Since January 1st of this year cattle receipts at five principal leading markets of the West total 5,919,999 head, a gain of 2,000 head over the same period in 1912. Hog receipts at five markets since January 1st total 13,696,000, a loss of 415,000 head from a year ago. Sheep receipts since January 1st at five markets total 10,624,000 head, a loss of 91,000 head from a year ago."

Sheep and Lambs at St. Louis.

At the St. Louis National Stock Yards, during the last week in October, strictly good lambs sold as high as $7.75 per 100 pounds for the first time in a good many years, while other good ones brought $7.50 to $7.65, and fair to medium grades went at $7.00 to $7.40; poor grades, $6.35 to $6.85; and the culls, $4.50 to $6.00. Most of the mutton sheep went to the slaughterers at $4.65 per 100 pounds; choppers and stockers sold at $3.35 to $3.85; fair stockers, $2.60 to $3.25; old cull sheep, $2.00 to $2.50; and bucks at $3.50 to $3.75, most of them at the latter price—all quotations being at the price stated per 100 pounds.

Top Hogs at St. Louis.

On October 31st, at the St. Louis National Stock Yards, T. M. Erskine, one of the most prominent shippers living in the Des Moines Valley, Iowa, had in hogs that averaged 300 pounds and sold at $8.20 per 100 pounds: and W. M. Fry, one of the regular Iowa shippers, was on the market with hogs that averaged 276 pounds and sold at $8.20; J. F. Hendrix, of Carroll county, Missouri, also sold hogs that topped the market at $8.20 per 100 pounds.

Native Cattle Prices.

During the last week in October, at the St. Louis National Stock Yards, in the market for native cattle, a bunch of 1,100-pound steers sold at $9.35 per 100 pounds, the highest price paid during the week. The bulk of the native beef cattle sold at $7.50 to $8.90 per 100 pounds, and the proportion of cattle sold above $9.00 per 100 pounds was very small.

Range Horse Sales.

The twelfth and last range horse sale of the season of 1913 will be held on Thursday, November 13th, at the St. Louis National Stock Yards. Some mighty good material is promised for the sale. These sales are the most important of any held in farming districts and have practically stocked up the country tributary to St. Louis with a magnificent, healthy, well-bred lot of range horses, fit for any purpose, according to breeding. Horses have sold well and every price paid was in competitive bidding. The sales are ably conducted by Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards, with J. J. Searcy, Manager of the sales. Remember the date—November 13th, on Thursday.

Oklahoma Steers at $8.10.

Towards the end of October, on the St. Louis market, J. A. Dobbin, of Craig county, Okla., marketed a consignment of steers that brought him the top of the market, and were the highest-priced bunch of steers in the quarantine division since the latter part of July this year. Mr. Dobbin's steers were thirty-two in number, averaging 1,275 pounds, and were bought by Armour & Co. for $8.10 per 100 pounds.

A Million Acres of Fertile Farm Land Still Available.

In Northwest Texas there are upwards of 1,000,000 acres of fertile land along the A., T. & S. F. Railroad, that are ideally adapted for stock raising. This land is underlaid with water at a shallow depth and can be bought well worth the money. It's a region of no crop failure. Land bought there at present prices should be a safe investment and a good one. Anyone interested in getting this land worth the money in large or small tracts should write C. L. Seagraves, General Col. Agent, A., T. & S. F. Railroad, 2516 Railway Exchange Building, Chicago, Ill., and ask for Northwest Texas folder. See page 6.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MISSOURI NATIONAL CONTEST.

Egg Laying at Mountain Grove, Mo. —Individual and Pen Records.

Report of First Ten and a Half Months—Seventy Pens, Ten Hens to Pen—700 Birds in All.

On October 1st, after ten and a half months, the manager of the Missouri National Egg-laying Contest reported that already a higher egg-laying average had been gained than in the first contest, with forty-six days yet to be heard from.

The English Single Comb White Leghorns from Tom Barron, of Catforth, England, seem certain to win. There has not been a month during the year that this pen has not been among the ten highest pens for that month. The highest individual hen so far is No. 860, a Buff Wyandotte from Vermont. This hen has laid 249 eggs and has forty-six days yet to lay. It is not probable that the individual record will be as high as that of Lady Show You of last year, which was 282 eggs.

The Ten Best Pens.

The following ten pens have made the highest pen record thus far:

	Eggs.
Single Comb Leghorns, England.	1,984
Silver Wyandottes, Iowa	1,692
Buff Wyandottes, Missouri	1,691
Anconas, Missouri	1,670
Single Comb Leghorns, California.	1,652
Black Minorcas, Iowa	1,643
Rose Comb Leghorns, Missouri.	1,618
White Wyandottes, Arkansas.	1,609
Buff Wyandottes, Vermont	1,597
Black Langshans, Missouri	1,555

Leading Pens For September.

No very high records were made for September, as the hens are in the midst of the moult and have not fully recovered from the hot weather of July and August. The following is the monthly record of the ten highest pens:

	Eggs.
Buff Wyandottes, Missouri	157
Black Minorcas, New York	154
Single Comb Leghorns, England.	154
Rose Comb Leghorns, Missouri.	147
Buff Wyandottes, Missouri	146
Single Comb Leghorns, California.	137
Silver Wyandottes, Iowa	133
Silver Wyandottes, Illinois	131
Anconas, Missouri	129
Barred Plymouth Rocks, Iowa.	124
Black Minorcas, Missouri	124

The 200-egg Layers.

The hens that have laid 200 eggs or over are as follows:

	Eggs.
Buff Wyandotte, Vermont	249
Single Comb Leghorn, England.	246
Buff Wyandotte, Missouri	245
Single Comb Leghorn, Missouri.	239
Rose Comb Leghorn, Missouri.	233
Ancona, Missouri	232
Single Comb Leghorn, England.	231
Single Comb Leghorn, England.	219
Ancona, Missouri	218
New York Method	218
Black Langshan, Missouri	215
Single Comb Leghorn, England.	215
Black Minorca, Iowa	214
Black Orpington, Canada	213
New York Method	212
Silver Wyandotte, Iowa	210
Single Comb Leghorn, California.	208
Barred Plymouth Rock, Illinois.	208
Single Comb Leghorn, England.	207
Silver Wyandotte, Illinois	204
White Orpington, Illinois	204
Silver Wyandotte, Iowa	203
White Orpington, Kentucky	203
Single Comb Leghorn, England.	203
Maine Method	202
Single Comb Buff Leghorn, New York	201
Buff Orpington, Missouri	201

We have now gone ten and a half months with this contest. The reports are issued each month, but before our December edition is issued we hope to have the complete report, with comparisons with the first contest.

Up to September 30th there had been a grand total of 94,188 eggs laid to date. The record for September was 6,424 eggs. Pen No. 26, Buff Wyandottes, from Eagleville, Mo., won the silver cup for the highest record for September.

Another Great Winning.

Dr. LeGear's White Rocks have again demonstrated their superiority over all others by their great winning at the Missouri State Fair, just past (September 27th to October 3d, 1913). They had strong competition, but never lost a ribbon. Won every prize competed for. Made a clean sweep, and also grand champion bird of the whole show.

There were only three prizes offered in each class. We entered one cock, eight cockerels, four hens, four pullets and two pens, and won first, cock; first, second and third, cockerel; first, second and third, hen; first, second and third, pullet; first and second, pen; and the grand champion sweepstakes bird of the whole show, all breeds competing. What more could be desired if you are looking for the best White Rocks in the country?

"Lady Ideal," our one-year-old White Rock hen, which was the champion bird of the whole show, was the admiration of all visitors to the Missouri State Fair. She has snow-white plumage; beautiful yellow legs; a long, broad back; low, well-spread tail; and is an ideal White Rock in every way. By being the best bird in the show she won the useful Poultry Journal silver loving cup offered for the champion bird in the State Fair Show. She will be mated to the blue-ribbon cockerel at the Missouri State Fair, and this mating is bound to bring prize winners.

We showed "Lady Ideal" last year as a pullet, and she won everywhere shown.

All our birds are absolutely our own raising. We have cockerels hatched in March that weigh eight pounds, and pullets the same age that weigh six pounds.

Bred and owned by Dr. L. D. LeGear, 713 Howard street, St. Louis, Mo. Farm at Kirkwood, Mo.

Concerning Lady Show You.

Mr. John G. Poorman, owner of Lady Show You, the hen that laid 282 eggs at the Missouri Contest last year, writes to Mr. T. E. Quisenberry, saying: "Regarding Lady Show You, will state that she is the most remarkable hen I ever saw. She never has been in good plumage, has not gone broody and has been laying right along. I hatched 101 chicks from 112 of her eggs. She is laying now an egg every other day. She has laid over 170. She has not been sick a day. It seems as though she delights in being alone. She is continually on the go from morning until night. Yours Truly, (Signed) John G. Poorman, Tinley Park, Ill.

POULTRY NEWS AND ITEMS.

The entries at the next Missouri National Egg-laying Contest consist of six pens from New Zealand, three from Australia, two from Vancouver Island, two from Canada, three from England, one from Germany and one from South Africa. The American pens entered number sixty-six.

Do not forget November 24th to 29th at the Coliseum, St. Louis.

"There is a time for all things; a time to lay, a time to hatch, a time to moult, a time to exhibit, and a time to advertise; but the best time to advertise is all the time."—American Poultryman.

Greene county, Missouri, with Springfield as the shipping center, shipped out in one year 8,102,460 dozen of eggs, 3,620,295 pounds of dressed poultry and 5,552,214 pounds of live poultry.

"Be a specialist: that is, do one thing and do it a little better than anybody else."—American Poultryman.

The correct idea in running an incubator is to carefully follow the instructions of the manufacturer, and, when in doubt, read over once more the instructions of the manufacturer.

The Missouri State Poultry Association and the Kansas City Association have combined and will hold a joint show in Kansas City's big Convention Hall, December 11th to 16th.

"The early-hatched pullets, going into maturity earlier, can be used for breeding the following spring, which is not desirable with late-hatched pullets."—New Jersey State Agricultural College Report.

Experiments in New Jersey egg production developed the fact that three-year-old hens lay very few eggs except in the spring months. White Leghorns and R. I. Reds led the egg-laying procession.

A hen at the Oregon Agricultural College has recently raised the year's egg-laying record from 282 to 283. She laid ninety-nine eggs in a hundred days, which looks like a standing record.

The Grading of Corn.

In regard to the grading of corn, as proposed by the Department of Agriculture and discussed at the recent meeting of grain dealers at New Orleans, the resolutions passed by the meeting say in part: The grades of No. 1 corn and No. 2 corn as proposed by the Department shall be agreed to, but that the grades proposed by the Department as No. 3 corn, with a maximum moisture content of 17.5 per cent., shall have for its name "standard corn," and hat the remaining three grades proposed by the Department as Nos. 4, 5 and 6 be numbered 3, 4 and 5.

Look up our various subscription premiums in this edition.

Books by a farmer

We employed a practical farmer to travel all along the Cotton Belt Route, in Arkansas and Texas, and talk with the farmers themselves; get pictures of their farms and their *personal* statements. Because he was a farmer this man knew what *you* wanted to know about these sections, and he tells you in these free books (new editions). Scores of actual photograph pictures of the farms he visited. You must not miss reading these books if you are interested in a *better* location. Send me your name and address today.

E. W. LaBEAUME, Gen'l Passenger Agent
St. Louis S.W. Ry. (Cotton Belt Route)
1109 Pierce Bldg., St. Louis, Mo.

The Fruitman and Gardener.

We have made arrangements with the publisher of **The Fruitman and Gardener** whereby we can furnish both papers for the price of one. It is a limited arrangement on the co-operative plan that we help each other, giving our efforts towards increasing each other's business. **The Fruitman and Gardener** is all right in every respect, with a special talent in adapting articles for all climates. No better paper is published for the money, and we have selected it as the best of several that have been offered. Anyone who will send us the usual fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower can select **The Fruitman and Gardener** for one year as a subscription premium. This offer will not last long, for the reason that the number we can accept on this half-price arrangement is small. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

TALK ON APPLE ORCHARDS.

Ideal Locations—What Apples Have Done in One Year—High Lands and the Hills—Water and Timber Advantages.

We do not have to go west of the Rocky Mountains to find apple orchards that in some years have produced enormous crops and made for their owners large sums of money. Here and there are well-handled apple orchards that have averaged per acre in some years more than $300. Some orchards in the Mississippi Valley have paid with a single crop the entire cost of the farms on which they were located.

Generally it will be found that these orchards are located in places suitable for apple growing and that the soil under them is of a kind recognized as apple tree soil.

Many of the most successful orchards are located on high ridges with valleys on each side. The soil is frequently found to be timber clay. The location s responsible for the trees escaping killing frosts at blooming time, when orchards lower down have had their bloom destroyed. Often the difference in temperature is but a few degrees, but those few degrees made all the difference in the world between a crop and no crop.

Strange as it may seem, a bleak hill top is less cold than the valley below it. This is because the coldest air settles to the bottom, leaving air a little warmer in the strata above it. The same reason exists for the killing of corn in the low places when higher up the corn is untouched by the frost.

The hill top gives what is known as air drainage, which now is regarded as very important in all localities where frosts come late in the spring or where the temperature drops to a very low point in the winter.

Fortunately, perhaps there are many ridge tops and hill tops all over the country that are suitable for no kind of agriculture but that connected with the growing of trees. Since these high localities are the best possible places in which to grow orchards, certainly they should be utilized to the uttermost. It will be found that in a wild state all such ridges and hill tops are covered with trees, and are more often clayey in nature than is true of valley situations where sand and loam soils are more common. This is because hill tops are not formed from such easily-moved elements as loam and sand.

If we look into the topography of any famous apple-growing section we will find that the high land and the hills have played a great part in the development of the apple-growing industry.

In the colder states, the proximity of a body of water is greatly to be desired. Often orchards on the shores of lakes escape frost injury, while orchards farther away suffer. Even small lakes of only a few acres in extent exercise a beneficial influence, especially if they lie between the orchard and the point of the compass from which the cold winds come.

Timber near an orchard is a protection from cold winds, as it tends to turn them aside. Timber also throws the wind up and over the orchard, which saves the trees from being badly shaken when they are laden with fruit. But timber also harbors insects to such an extent that the spraying for insects is often neutralized.

Ways With Grapes.

Many complain that grapes are only good when fresh; that they would not give a fig for the canned products. And yet there are several ways in which these same critics will eventually find them an agreeable relish.

One woman who has several little folks to provide with school lunches depends largely upon her fruit jellies for "spreads." One day they are given a dark jelly made by cooking the skins and straining. The next, it is a light, clear jelly, made from the pulp, which is easily freed from the skin by slipping the latter off with the finger pressed at the stem end of the fruit. After the jelly has been drained, she puts the residue through a colander and removes the seeds, cooking the rest into an appetizing grape butter, good variety for another day.

She always cans several cans of grapes for pies. The skins are removed after the fruit is washed, and these are kept separate from the pulp. The latter is passed through a colander and the seeds removed. The skins are then added to the pulp, with sugar to taste, and spices, if preferred. Cook until the skins are tender, and can. This is fine either for pies or sauce, and the doctor's objection that eating grapes courts appendicitis can here have no weight, since the seeds have all been removed.

Grapes are most wholesome, and the juice, canned and bottled, makes an agreeable drink for sick or well. Some prefer to wash the grapes and put them into cans, then pour over them a hot syrup, allowing a cupful of sugar to a quart of fruit. Place the cans in a boiler of water and cook until thoroughly heated through, then seal. They have in this way the fresh taste so highly appreciated. Of course, there should be a rack or clothes in the bottom of the boiler to prevent breaking cans. —Bessie L. Putnam.

Foreign Meat in London.

From a report just received at the State Department from the American Consul General at London, it appears that almost the whole of the foreign supply of beef imported into the United Kingdom is now derived from Argentine and Australia; whereas in 1908 the quantity of fresh and refrigerated beef received from the United States was 162,000,000 pounds; in 1912 it dwindled to 685,000 pounds, and this quantity was distributed throughout the United Kingdom. In consequence there is no quotation for American beef (that is, from the United States) recorded in the weekly wholesale market reports, nor has there been during the current year.

The following were the prices during the week ended September 24th, 1913, for imported beef in London per hundredweight of 112 pounds: Argentine frozen hindquarters, $9.08; forequarters, $6.53; chilled hindquarters, $11.92; forequarters, $7.66; Australian frozen hindquarters, $9.08; forequarters, $6.53.

In the Central Meat Market, London, on September 29th, foreign beef realized the following prices per hundredweight: Argentine chilled hindquarters, $9.65; forequarters, $6.35 to $7.38; River Plate, frozen, hindquarters, $9.08 to $9.36; forequarters, $7.38. The retail prices to consumers vary slightly in different districts in London. A fair average per pound in cents is: Sirloin, 19; wing rib, 18; silver side, 16 to 17; steaks, 24 to 28.

Australian Sheep and Wool.

Since we are to admit foreign wools free of duty sheep raisers will be interested in the following from United States Consul W. C. Magelssen at Melbourne, Australia, who says that the census returns of stock show that as a result of the drouth sheep figures in Victoria declined from 14,000,000 at the end of 1911 to 13,000,000 at the end of 1912. The total losses of grown sheep in the whole of Australia for this period are estimated at 10,000,000 head. In Victoria and South Australia the clip was good, the wool being sound and well grown, while in Western Australia the clip showed the effect of the drouth, most of the production being poorly grown, thin, hunger-fine, and much more wasty than usual. Considering that most of the sheep existed for about half the year on scrub it is surprising that the Western Australian clip was no worse.

Of wool produced in this district the United States took from South Australia $87,082 worth and from Victoria $2,290,934. No Western Australian wool was shipped direct to the United States. Germany is Australia's best customer for wool, and of growing markets Japan and China appear the most promising. Although India is one of the smallest of Australia's customers, there are signs of an expanding trade there also.

While the fears of a very considerable shortage in the clip were confirmed, the effects were mitigated by a higher range of prices than last season. The wool season in Australia is reckoned from July 1st to June 30th. Shearing goes on practically the whole year round, starting in Queensland in February and finishing in November in Tasmania.

SHEEP AND WOOL NOTES.

There is a substantial protective duty on woolen goods, but raw wool is now admitted into this country free of duty. We refer to the law that was recently enacted by Congress.

The Twenty-fourth Annual Meeting of the American Hampshire Sheep Association is called to meet at the Live Stock Exchange Building, Union Stock Yards, Chicago, Ill., on Wednesday evening, December 3d, 1913, for the purpose of electing a full official board to serve for the year 1914, and such other business as may properly come before the meeting. Matters of great importance to the American sheep breeder are to be discussed.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, doors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Base Burner

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal,** both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE SAFE WAY

Is always the best way. Sudden freezes, icy, slippery roads have no terror for the farmer whose horses wear

RED TIP CALKS

All Roads are Good Roads. His horse is as sure-footed as on bare macadam.

RED TIP CALKS

Are easy to adjust and are so made that they wear sharper with use. They will hold a horse up on any road, however slippery, and will give him courage and self-reliance. One trial will convince you.

PUBLIC AUCTION SALE.

PRIZE-WINNING POLAND-CHINAS.

Notice is hereby given that on SATURDAY, NOVEMBER 22d, 1913, there will be sold at Auction forty (40) head of highly-bred Poland-China Hogs, bred and raised by WILDER CARPENTER, of Grandview Breeding Farm at Marmaduke, Ark., and forty (40) head splendid Poland-Chinas from the celebrated herd of Sheehy Bros., one of the best bred, raised and exhibited herds in the fine stock-breeding state of Missouri.

EIGHTY (80) HEAD IN ALL.

The offerings will consist of Spring Males and Gilts, bred Gilts and bred Sows; also one and two-year-old Boars. The Auctioneers will be H. O. Correll, of Taylorville, Ill.; W. O. Irby, of Pigott, Ark.; and W. S. Whetstone, of Rector, Ark. In addition to the Poland-Chinas there will be sold at Auction the BLACK WALNUT STALLION, 1,802, and JEFF. DAVID, 3,029.

Send for Catalogue at once and get a line on the magnificent breeding of the Poland-Chinas and make a note of the date of the sale. The sale will take place at MARMADUKE, ARK., on the St. Louis and Southwestern Railway, just above Paragould, which is the junction of the Iron Mountain and other roads.

Finer stock was never offered at a Public Auction; the Stallions are first-class; and the Hogs are from illustrious Sires and meritorious Dams that are grand prize winners wherever exhibited.

Come to the sale. Most magnificent Poland-Chinas and excellent recorded Stallions.

Prize-winning Poland-Chinas,
MARMADUKE, ARK.

FOREIGN BEEF COMPETITION.

What the American Cattle Raiser May and May Not Expect—A Bureau of Animal Industry View of the Subject.

Prof. James M. Pickens, of the United States Bureau of Animal Industry, has the following to say on the subject of meat imports:

"While future imports may afford some measure of relief (from meat shortage), too much reliance should not be placed upon this source of supply. A study of the statistical situation in other countries does not disclose where we are likely to obtain any large quantity of beef for an extended period. Besides our nearest neighbors, Canada and Mexico, the sources of imports are practically limited to South America (especially Argentine) and Australia. New Zealand exports large quantities of mutton but very little beef. Canada and Mexico do not at present give promise of substantial assistance. The number of beef cattle in Canada is only about one-ninth of that in the United States, and shows a steady decrease, amounting to over 11 per cent. in the last five years. Recently thousands of cattle have been brought in from Canada, mainly because of poor pasturage and partial failure of the hay crop there. This movement may continue for a time, but it will naturally have the effect of further reducing Canada's stock of cattle. The unsettled conditions in Mexico make it unlikely that any considerable number of cattle can be expected from that country for at least a few years. Argentine and Australia are already supplying most of the British imports, and have been called upon to make up the loss in the supply formerly furnished by the United States. The Australian colonies, however, are sheep rather than cattle countries and export probably four times as much mutton and lamb (by weight) as beef. Argentine is a large producer and exporter of beef, but has apparently reached the limit of her present cattle resources. The number of cattle in that country showed a decrease at the last census (1911) as compared with the preceding one (1908). The report from Buenos Ayres that 7,262,000 cattle were killed in 1912 out of a total stock of 29,000,000 indicates that Argentine is drawing on its reserve.

"It appears that England alone could probably take all of the foreign beef available for export, to say nothing of the new markets which have already been found in other European countries. We shall therefore have to bid against England and other purchasers of foreign beef, and this competition will tend to keep up prices. It must be remembered, too, that this foreign beef is not up to the standard of quality of our corn-fed beef.

"In view of the present meat situation at home and abroad, it is unlikely that our cattle raisers will have much to fear from foreign beef."

Horse and Mule Receipts.

During the month of October the St. Louis market received 16,942 horses and mules, which is an increase of 1,806 head over the same month last year. Chicago received 4,976 head, a decrease of 1,148, as compared with last year.

Wool Market in the Dumps.

There will be very little satisfaction in the wool trade until it has found bottom; probably the bottom has been reached, but it will require some time to find it out. Foreign wools are now admitted free of duty, but there is a duty on woolen goods.

Money in Sausage.

There is plenty of money in making and selling sausage. Farmers can sell millions of pounds of it, providing it is made right, and to make it right, all that is necessary is the Enterprise Sausage Stuffer. See page 25.

The Farmers' and Shippers' Directory of Business Interests advertised on page 8 is a very useful work for farmers to have on a farm.

LIVE STOCK BREEDERS' CARDS.

AMERICAN JERSEY CATTLE CLUB
324 W. 23d St., New York

THE GRANDEST SUBSCRIPTION OFFER.

A Splendid Magazine One Year—Universal Magazine — National Farmer and Stock Grower One Year—Eight Standard Grapevines —All For One Dollar.

The UNIVERSAL MAGAZINE is our own publication. It is seven years old. It is a nice, clean, interesting, illustrated magazine that is increasing in circulation every month upon its own merits. During the coming year it will be exactly the same size as THE NATIONAL FARMER AND STOCK GROWER

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of Eight Two-year Standard Grapevines. These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early**, a black grape; **Catawba**, dark red when fully ripe; **Diamond**, a large white; **Concord**, black early; **Agawam**, red or maroon; **Niagara**, large and handsome white; **Delaware**, compact red; and **Worden**, a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

Our proposition is that we will send you the UNIVERSAL MAGAZINE for one year; THE NATIONAL FARMER AND STOCK GROWER one year; and the COLLECTION OF GRAPEVINES, nicely packed, postage paid—all for one dollar.

We have word from the Nursery that they can ship the plants on receipt of order.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar ($1.00), for which send me the UNIVERSAL MAGAZINE one year; THE NATIONAL FARMER AND STOCK GROWER one year; and the EIGHT TWO-YEAR-OLD STANDARD GRAPEVINES as advertised.

An "International" Investment.

Contrary to the generally-accepted belief the exhibitions of live stock in the United States are the greatest in the world. Not only are the displays of animal excellence themselves superior to all others, but the equipment for the staging of the shows and the accommodation of the visiting public is far better and more comprehensive than in any other country. Vast improvements have been made the past year in the setting of the International Live Stock Exposition, which will this year be held from November 29th to December 6th. Concentrated, though safe and sanitary stabling and display of the animals, commodious lecture halls, a magnificent exhibition arena, together with all necessary comforts for visitors—all, as it might be said, beneath one roof—form a combination not hitherto contemplated in connection with any live stock show.

In no other country is the show yard so closely associated with the national educational system, in none is the whole scheme and plan of exhibition arranged so that each season's prize winners may be brought before a court of last resort for final alignment, as at the "International," which will this year be held from November 29th to December 6th. Here alone of all the great world's shows may the best of all useful breeds of farm animals be seen in their foremost estate in one grand display.

In the United States we have the best, and the best of the best may be seen each year at the "International." Many foreign countries have great individual exhibitions, but by common consent of all the world's highest authorities, the "International" is an easy leader. At this show may be seen the pick of the foremost foreign breeds massed together well nigh beneath a single roof.

Gathered in their thousands at the greatest railway center in the world, the animals at the "International" offer a liberal education in themselves to all who care to study them. Here all of our master breeders, and many from foreign climes, take post-graduate courses. Money paid out in attending the show is regarded by them as the most profitable, sound and remunerative investment they can make.

To keep up with the trend of live stock breeding, the farmer and stockman must needs attend the "International." He must study the work of the judges, and if he cares to, and goes the right way about it, he may learn from the lips of these judges their reasons which governed their awards.

It is a show by the people, for the people, of the people. Its guiding principle is the greatest good to the greatest number. It offers a matchless opportunity to study, to learn, to meet and know the master minds in live stock circles. Any farmer who fails to attend the "International" deliberately deprives himself of an asset—a valuable asset which in after years would have bulked large in his store of knowledge and beyond peradventure in his bank account also.

BLOODED STOCK NOTES.

On the front page of the October number of The National Farmer and Stock Grower we published a picture of Iowa's Delight, grand champion Chester White sow, owned by Mr. Thos. F. Kent, R. F. D. 2, Walnut, Iowa. We made a mistake, however, by saying she was grand champion sow at the Minnesota State Fair, whereas we should have had it the Nebraska State Fair. The grand champion Chester White sow at the Minnesota State Fair was the magnificent young sow Bess, a senior yearling, exhibited by C. A. Andrews & Sons, of Sheffield, Ill.

Mr. Wm. Reulecke, of R. R. 2, Assumption, Christian county, Ill., on the Illinois Central Railroad, just north of Pana, is advertising Poland-Chinas of his own raising. He has fifty head of gilts and boars for sale by his great boar Big Chief. Read his card, which is located on page 20, with other breeders.

Get My Low Price On The Hercules Stump Puller

SEND me your name if you have stumpy land, or even a few stumps in your fields. I want to make you a price that will save you at least 50% on the regular price of the famous Hercules! This is the best chance that you have ever had, to get rid of the stumps in the quickest, cheapest and best way.

Pull Out The Stumps!

All Steel Triple Power 3-Year Guarantee

Stump land is *loafer* land, *robber* land, *failure* land. You can't afford to keep stumps. They cost too much money. They take away half the realty value of your land—and they rob you of *big crops that you don't get!* Let me quote you my price on the world's best machine for clearing land.

You Take No Risk

I'll send the Hercules on 30 days free trial—you to try it in your own way, on the stumps in your fields. If you keep it, you are still further protected by any unqualified 3-year guarantee which insures the free replacement of all broken castings for 3 full years, whether the broken castings are *your* fault or the fault of the machine!

Write Quick For Big Free Book

You will be glad you wrote. You'll be pleased with the photographs, letters and facts about the Hercules construction. My price will make it easy for you to own a Hercules. Nothing to be gained by waiting—much to be lost. Write me now while my special price offer holds good. Address me personally,

B. A. FULLER, President.

Some Facts About Mushrooms.

Warmth and moisture are the ideal combination for the varied forms of mushrooms, and in the autumn months they may be usually found in abundance; yet scarcely a season passes without some fatality being recorded as a result of indulgence along this line. The old distinction between a mushroom and a toadstool was, that if it killed the one eating it, it was a toadstool; if it proved harmless, it was a mushroom. Botanically speaking, both kinds now belong in the same class; but for the common people there is still scarcely a better distinction between edible and non-edible mushrooms than the old rule.

That there are many more good than poisonous species does not in the least mitigate the virulence of the latter when eaten. One volunteers to gather a basketful for those unfamiliar with them; another begs the recipient of this service to refrain from taking the risk of eating them; and certainly this is a small thing to do when we take into consideration the many dainties incurring no possible danger which may be had.

Yet scientists and epicures alike affirm that the mushroom is a most appetizing and nourishing food; consequently human interest will continue, as it has done for many generations. Those who know the edible sorts will continue in their use; others will try to learn the distinctions, and a fatal blunder will sometimes be made.

There are plenty of rules for distinguishing between good and bad, and an abundance of exceptions with which to prove the rules. State Botanist Peck, of New York, called attention some years ago to the rule "Avoid all that have white gills and a hollow stem;" yet he shows that many excellent sorts have these peculiarities in common with the deadly Amanitas. Another authority would have us discard all mushrooms that have a warty cap or a membraneous sheath at the bottom of the stem;" yet some of the harmless species would by this rule be thrown aside. Some think that all having a meal-like flavor are edible, though the facts do not verify this rule. The cook who used the test of the silver spoon in cooking long ago lost her place through the death of her victims of misplaced confidence, and many more of the popular tests have been proved of no avail. In short, Prof. Peck sums up the only safe and reasonable way is "to learn to recognize each species by its own peculiar specific characters."

It is evident that those who are now restricted to one or at most two or three species might easily extend their field very materially by a more thorough knowledge of the family. It is equally patent that the familiarity which breeds carelessness might work sad havoc. There are scientific treatises on the subject which so carefully describe each species that the botanist will scarcely go astray in identification, even though the forms are new. But for the ordinary person, even the most careful description may be as misleading as have been some of the rules above quoted. There is no safe way unless it be the guidance of one entirely conversant with the subject. The study of the forms direct is the only reliable way for popular distinction, and even this is not always reliable.

If you are a lover of mushrooms, resolve never to eat one that is not of a kind which you absolutely know to be good. Take no chances on uncertainty. Increase your own list as you are able; but do it only on authority of unquestionable value. Always select specimens which have not commenced to decay. Insects are prone to attack certain kinds, and when they appear in the stem, even though the upper part seems unharmed, the quality is impaired. Caution, extreme caution, should be the constant watchword in their use. —Bessie L. Putnam.

The Dusting Cap.

In doing the ordinary morning work more or less dust is bound to find lodgment in the hair, no matter how careful we may be. The dusting cap has come to be a most convenient article, and if made of the same material as the apron it is quite becoming to the wearer. Or it can be made of light calico or percale, using a left-over for which there may be no other use. Enough of these little caps, so that a clean one may always be available when doing dusting, sweeping or any work in which there is dust will prove quite a help in keeping the hair and scalp clean.

Cut out a circular piece of cloth eighteen inches in diameter and gather three-quarters of the way around. Make a double band of a straight piece of the same goods three inches wide and eighteen inches long and sew upon the gathered edge of the crown. Cut the remaining part off square with the cloth, allowing half an inch to turn in for hem. Hem this part and run through it a piece of elastic just long enough that when it is fastened the gathered portion, together with the straight band previously sewed on, will fit neatly around the head. Of course, after cutting the circle paper pattern, one may cut it off square on the one quarter and thus save cloth.

If the cloth used is blue and white gingham a dainty finish for the edge of the straight strip is a narrow band of plain blue stitched along the outer edge When finished, turn this strip back, so that it will be only an inch and a half wide as worn, and double. If a white percale is chosen, the binding should be of the same color as the small figure in the cloth. It is well to leave a place open at the ends where the rubber is put in, so that it can be easily removed before washing. Some dainty housewives like to wear caps similar but of sheer, lace-like material, when cooking and doing other work about the house.—Bessie L. Putnam.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Requested Her to Stay.

James H. Walls, "the fly man of Boise," has made Idaho the most sanitary and the most fly-proof state in the Union. Mr. Walls, discussing his success, laughed and said:

"I have succeeded in eradicating the fly by making all Idaho hate the fly, even as poor old Dan Carson hated his wife.

"Poor old Dan lay dying. His wife, melting a little for once, said to him:

"'You're going, Dan?'

"Dan, his eyes closed, made no answer. His wife, then repeated, with a sigh:

"'Dan, you're going, but I'll soon follow you.'

"Upon this Dan's glassy orbs opened, and he said in a hollow voice:

"'You stay here as long as you can.'"—New Orleans Daily States.

Detailed reports from correspondents on the winter wheat condition and acreage indicate excellent soil condition and growth, with notable increase in acreage. Farmers are disposed to hold their corn and oats at present prices.

Edwards Patent
STEEL Shingles Beat WOOD

Never Rot, Rust or Burn
Cost Less Than Wood Shingles

Steel Shingles are so far ahead of common wood shingles that there's simply no comparison. They last four times longer than wood shingles—are ten times easier to put on—and make a roof that will NEVER rot, rust, leak or catch fire. An Edwards Roof gives wonderful

Protection to Life and Property

Each Edwards Steel Shingle is galvanized all over. Edges are dipped in MOLTEN ZINC. No chance for rust to get in its work. Our patent Interlocking Device makes all joints water tight and takes care of expansion and contraction.

Steel shingles come in sheets of 100 or more—as easy to lay as a carpet—on sheathing or over old shingles.

Lowest Factory Prices
All Freight Fully Prepaid

We sell direct from factory. We pay the freight and give $10,000 untarantee against lightning loss.

Join hands with over 100,000 owners of Edwards Roofs to save money, time and trouble.

WRITE! Send postal, at once, for world's greatest Roof Book, No. 1157, and Special Factory Prices on Edwards Steel Shingles. If possible, give dimensions of your roof, so we can quote prices on the complete job.

THE EDWARDS MANUFACTURING COMPANY
1107-1157 Lock Street Cincinnati, Ohio
Largest Makers of Sheet Metal Products in the World

THRESHING PEAS AND BEANS.

The Operation Directly From the Vines Without Splitting the Seed.

Farmers almost in all sections of the country are experimenting more or less with the raising of beans and peas both for seed and for fodder.

In the pea-growing sections of the country the saving of the seed has not been attempted as much as the value of the seed should seem to merit, but the reason for that appears to be that there has been no adequate machinery for the purpose of harvesting and threshing.

Beans, of course, are grown extensively in some states, and there are regular threshermen with special machinery traveling around the country doing jobs of threshing these crops; but in other parts of the country, where the growing is not so extensive, the threshing has been left to common grain threshers or has been attempted by hand, which is very wasteful in either event.

It is a mighty hard thing to thresh beans and peas successfully without injuring a great percentage of the seed or without leaving a great percentage of the seed with the vines and pods. Therefore special machinery is necessary in order to do this, and it has been conclusively proven that it requires two cylinders to successfully do the work.

We have in our columns for the last several months carried the advertisement of the J. L. Owens Company, who manufacture, in fact are the only manufacturers, of a full line of bean and pea threshers. These people are manufacturing machines that can be operated with a two-horse-power gasoline engine to big machines for traction power. These sizes will fit the small grower who cares only for a machine for his individual use as well as for the medium and large grower and thresherman.

The machines are absolutely guaranteed to thresh all varieties of beans and peas directly from the vines without splitting the seed and without losing any of the seed in the vines.

We ask our readers who are interested in the pea and bean-growing proposition to write the J. L. Owens Company and ask for one of their complete catalogues, which, in addition to a full description and illustration of their full line of threshers, also contains some valuable information as to the soil, feed and market value of these crops. They also will furnish you with actual facts and figures based upon actual experiences of growers in different parts of the country, and to what extent it is possible to accomplish in real profits from growing these crops with proper handling. Kindly mention this paper and address J. L. Owens Company, Chamber of Commerce, Minneapolis, Minn. See illustration of bean and pea thresher on this page.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather, or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Weeds That Are Traveling.

The most of our worst weeds have gone from east to west, some of them having crossed the Atlantic to reach us. But there are a few which have reversed their direction; and in either case it is wise to be ready to meet them and to give to each the reception deserved.

For years we have had rumors of the habits of the orange hawkweed in the dairy regions of Eastern New York; but it is now thoroughly at home in many parts of Pennsylvania and working westward, largely through the medium of newly-seeded meadows. It is also locally known as "Devil's Paintbrush," a name peculiarly applicable both from its habits and form. The flowers are of a bright orange or scarlet and the entire plant is clothed with black hairs. Its spreads rapidly from root multiplication and from seed, and its first appearance in a neighborhood should be the signal for a persistent fight. Someone has recently said that by scattering salt freely upon the plants when the dew is on will soon destroy it. The plan is well worth the trial.

The wild carrot, or "Queen Anne's Lace," an interesting plant until we see how completely it takes possession of a field, is really not so formidable as its habits would indicate. It is a biennial, blossoming and forming seed the second year. Cultivation will soon destroy it, for, unlike the white daisy, which is only multiplied by any but the most persistent hoeing and cutting, this plant lives only two years at most, and if the seedlings are destroyed its hold upon the land is lost.

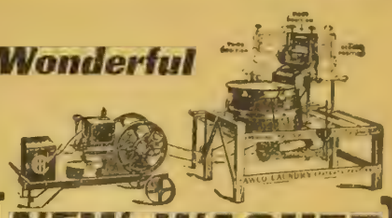
We have noticed in many newly-seeded meadows stalks of the beautiful, bright blue succory. Its charming appearance may at first excite no suspicion, but it is a troublesome weed, and if you happen to come upon it for the first time, just make it a point to pull out the few plants which have this season appeared. It will save future trouble.

It is a very good plan not to rest if at any time you see some new plant. Notice its habits; if it seems inclined to increase too rapidly. If you cannot find out in your neighborhood the name and nature of the plant, box up a specimen, showing flower, foliage, seeds and root formation, if possible, and send to the State Botanist or to the Department of Agriculture, writing them at the same time for information regarding it. They are always glad to answer these queries, sometimes gaining information as to the location of certain pests which is of value to them.

It is easy to sound false alarms, but far better to do this than to allow a pest to get thoroughly established in a community, when by a little trouble now it can be stamped out on the start. For instance, in a locality where the yellow clovers have never before been seen, a certain farmer was surprised to see in several places on his farm the yellow clover Trifolium agrarium, growing freely. How it came there is a mystery, as it was not on ground recently reseeded. Several neighbors visited the new plant with doubt if not positive alarm.

In this age of the world, with new plant and insect pests constantly striving for the ascendancy, it pays well to keep a sharp look-out for them. The man who asks questions about these new things, too, is the one who stands the best chance to get rid of unpleasant ones. But to make a practice of pulling up every plant that is strange would be as foolish as laborious. Test first and treat them according to what they deserve.—Bessie L. Putnam.

Wonderful



NEW WASHER

The great new model Awco is now ready. Thousands of people have been inquiring anxiously for this announcement. **At last it is here. The final achievement in washing machine manufacturing after 20 years.**

The Awco Whole Laundry In 4 ft. Square

Here are some of the great exclusive features of the Awco Washer:

The Klatch-Katch which puts you in instant command of the washer, makes wringer finger-pinching impossible, prevents all clogging and won't allow buttons to be torn off.

The new three-positien wringer attachment which enables the clothes to move from washing machine to basket almost automatically.

The new four foot square outfit on which you have a whole laundry and which may be pushed out of the way into a corner.

Arrangement whereby all lifting and moving of heavy tubs positively done away with.

Find out about these things before you buy another washer. If you want absolutely the latest features in washing machines, here they are.

Write Today for Free Book

All the secrets of French dry cleaning fully explained in this book. Find out how to clean woolens, mixed goods, cotton goods. Learn how to clean velvets, draperies, laces, leather, linens, etc. Find out how to remove stains of all kinds. The book explains. Write today and give full address, state, county, etc.

The subscription price is 25 cents a year. Send us 50 cents and we will send you the UNIVERSAL MAGAZINE for two years, and we will also send by mail, prepaid, one Genuine Navajo Ruby Doublet as a premium. We guarantee satisfaction or money refunded. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WORK OF THE FROST.

Devastation in Warm Zones and Benefit in Others Where Compensations Exceed Losses.

In the temperate zones, the farmers have an ally that is unknown in the warm zones of the earth, and that ally is the frost. When the frost appears at all in the warmer zones it is an agent of destruction, leaving disaster in its wake. More than once, orange groves of great value have been destroyed by the frost in a single night, and there has been no compensating good. But in the two great temperate zones of the world the frost plays not only a savage role, but also a beneficial one, and the good far outweighs the bad.

It is without doubt largely the frost that gives us the sod, which is such a factor in clothing our pastures and making our lawns. It is said that sod is seldom found in the warmer parts of the South, and that it is extremely difficult to build a lawn under any system of agriculture.

But in the cooler zones the frost pulverizes the soil below the grass roots every winter and so loosens the ground that the grass roots naturally permeate it everywhere and form that delightful carpet of green of so much importance to us in many ways.

The frost is eternally helping us to make our clay land suitable for agricultural purposes. It lays hold of every particle of moisture in the clay soil within its reach and swells the size of that particle of moisture. As the same work is done with every other particle of moisture, the clay particles are pushed away from each other, and in the spring when the frost has gone out of the ground the clay particles are so far apart that the air can get in between them, and this air furnishes the elements to support bacterial life that is operating for the elaboration of plant food from the latent food elements in the soil. This is of great importance.

For the above reason, the draining of clay soil is important, as it lowers the level of the water and lets the frost penetrate it just so much more. Many a farmer will testify that when he has dug through a piece of wet clay land and has tiled it, the clay above the drain has become more porous than it was before, and the same is true of the ground on each side, as far as the influence of the drain is felt.

One great use of the frost is to kill cutworms and other insects Where these insects become troublesome, fall plowing will go far to destroy them. The turning up of the furrows lets the frost into the soil so deep that the worms are destroyed.

But the good work of the frost must not alone engage our attention. There is a reverse side. Many of our fruit trees have tender roots that will not stand a high degree of frost. In such cases the roots should never be rendered more exposed by fall cultivation of the ground around the trees, and the same is true of grapevines. Not only should the soil be left as hard packed as possible, but various kinds of covering may be put on to reduce the depth to which the frost will go.

Golf Course Costs Money.

"What are you working so hard for?"

"I want to provide for my boy's future," replied Farmer Corntossel. "I want to lay by enough wealth so that I can leave Josh this farm for a golf course."—Washington Star.

Willys-Overland Autos.

Do not forget to read and study carefully the points of superiority set forth on page 32 of the Willys-Overland cars. Superior quality and the lowest cost consistent with it. At the Automobile Show recently held in St. Louis the Willys-Overland car was a great attraction, fully proving the assertion that the 1914 model was a better car for less money.

THE KITCHEN GARDEN

Requires Large Quantities of Manure — Fall Work — Provide For Drainage—How to Lay It Out.

The kitchen garden should receive more attention on our Western farms than it generally does. The Eastern farmer that comes West is astonished to find many farms where no attention is paid to the garden that should provide supplies for the table. On the farms of the East the habit of garden making has come down from the times of the Pilgrims.

For many years now there has been an agitation in favor of a kitchen garden on every farm, and it is probable that this agitation has borne some fruit, and that the percentage of farms having such gardens is much greater than formerly; but it is even yet too small.

The kitchen garden should be begun in the fall. If it is a new garden the soil should be broken up now and heavily manured. If the ground does not freeze up before the sod has rotted, there should be another plowing this fall to incorporate the manure with the soil and get the land in the best possible condition for the work in the early spring.

During the winter much rotting of the manure will take place, and this rotting is absolutely necessary for the well-being of the early vegetables, such as lettuce and radishes. The manure applied early in the spring will rot in time to stimulate the growth of the vegetables to be used in early and late summer.

One thing should be kept in mind, and that is, that success with the garden requires the application of a large amount of manure. The quantity put on this fall should be much greater than is usually applied to land for field crops. If a large quantity of manure is incororated with the soil this fall the supply of plant food in the ground next spring will be so great that the early vegetables will grow rapidly. Rapidity of growth is necessary if the vegetables are to be crisp and succulent. Slow-growing lettuce and radishes are very unsatisfactory.

In plowing the garden in the fall frequent dead furrows should be left, so that the water will drain off quickly in the spring and the ground become warm at the earliest possible moment. Also these dead furrows, if deep, will enable the frost to strike deep and so pulverize the soil to a good depth, which also will be a help to the condition of the soil in the spring.

In laying out a new garden, make it long and narrow. This will make it possible to use a horse in cultivating. One of the great objections urged by the Western farmer against the kitchen garden is, that he has not time to look after it and cultivate it, for such work is often hand work on account of the location or shape of the garden. Too often the garden is of such shape that horse work is not profitable. But all students of this matter now advise a shape that will facilitate work with the horse cultivator.

In setting out such plants as asparagus have them in one long row, rather than in several short ones, for the reasons stated above. This suggestion should also be followed in the setting out of all perennial fruit-producing plants.

A Mixed Item.

F. E. Wall, Chairman of the Selectmen of Bar Harbor, laughed at the story that he proposed to abolish the turkey trot and bunny hug in the houses of the Bar Harbor cottagers.

"There is a little truth in the story," he said, "for we do intend to supervise our public dances, but to say we would penetrate with our rules and regulations into the drawing rooms of our cottagers — ridiculous!

"Why, this mixture of truth and absurdity reminds me of a newspaper paragraph I saw in a country paper the other day. It was an obituary paragraph, but a fire story had got mixed with it, just as absurdity has got mixed with our dance regulations, and the paragraph ran thus:

"'The pall-bearers lowered the body into the grave. It was consigned to the flames. There were few if any regrets, for the old wreck had been an eyesore to the village for years. Of course, there was some slight individual loss, but this was fully covered by insurance. 'Good riddance' seemed to be the universal sentiment."

Money in Sausage

The demand for good country sausage, such as you can make, is always greater than the supply and you can get good prices. Do your own killing this fall and see how much more profitable it is than to ship. You will need an

ENTERPRISE

Sausage Stuffer and Lard Press

the one machine that stuffs sausage so that it will keep. **Cylinder bored true.** The corrugated spout, our patented improvement, does it—fills the casings solid.

No air bubbles get in to spoil the meat. This is also the perfect lard and fruit press.

Bring It Within Reach.

"Optimists are all right, provided they are not unreasoning and excessive," said Norman Hapgood, the Fushion leader at a Fushion luncheon in New York.

"The optimism of our opponents," he went on, "reminds me of Smith. A druggist said to Smith one night at the lodge:

"'There's a movement on foot to make drugs cheaper.'

"'Good!' said Smith. 'Good! That will bring sickness within the reach of all!'"

THE NATIONAL KITCHEN SET

Given as a Free Premium With the Best Farm Publication, The National Farmer and Stock Grower.

In this Kitchen Set we offer the three articles which every housekeeper will recognize as these most useful. THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

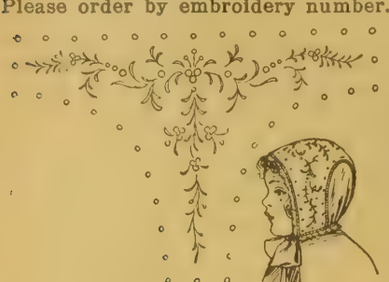
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.

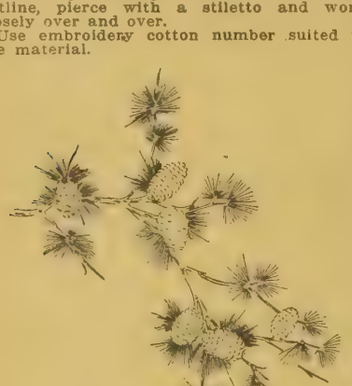


A Child's Cap.

No. 760.—A Design For a Child's Cap. The leaves, flowers and dots can all be worked solidly with the stems outlined, or the leaves and flowers can be worked solidly with the dots as eyelets.

To make solid embroidery, pad the stamped figures by darning backward and forward, lengthwise, and then cover closely with over and over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the dots as eyelets, first encircle by running a thread around the outline, pierce with a stiletto and work closely over and over.

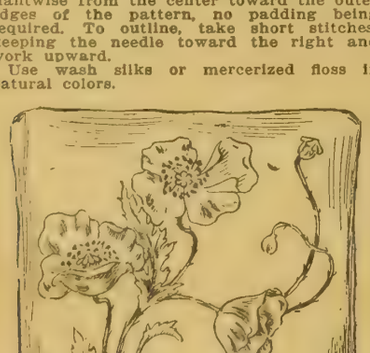
Use embroidery cotton number suited to the material.



For Cushion or Pillow.

No. 763.—A Design For Embroidering a Cover For a Cushion or Pillow Twenty-four Inches Wide by Eighteen Inches Deep. The cones and the pine needles are to be worked in outline stitch, the stems in outline, or in long and short stitch. For long and short stitch, take irregular stitches, working slantwise from the center toward the outer edges of the pattern, no padding being required. To outline, take short stitches, keeping the needle toward the right and work upward.

Use wash silks or mercerized floss in natural colors.

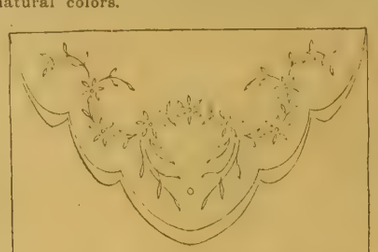


A Splendid Pillow.

No. 765.—A Design For Embroidering a Cover For a Pillow or Cushion Twenty-two Inches Square. The flowers and leaves are designed to be worked in long and short stitch or to be simply outlined. The seed pods are to be worked in solid embroidery, the stems and veins are to be outlined and the stamens worked in French knots.

To work long and short stitch, take irregular stitches close together, working slantwise from the center toward the outer edge of the pattern; no padding is required. For solid embroidery, first pad by darning backward and forward, lengthwise, then cover closely with over and over stitches, keeping the needle to the right and work upward. To make French knots, bring the threaded needle up through the goods, twist the thread round the needle several times, and then, holding the thread tightly in the left hand, insert the needle near the starting point and slowly draw the thread through. To outline, take short stitches, keeping the needle toward the right and work upward.

Use wash silk or mercerized floss in the natural colors.



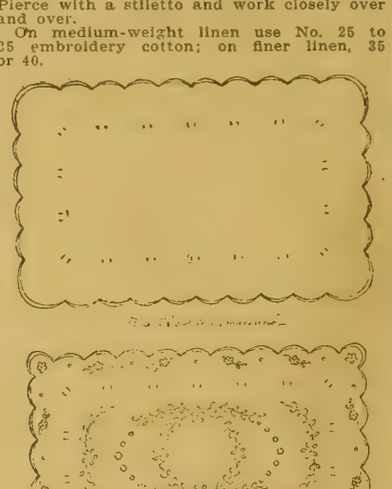
Handkerchief Case.

No. 764.—A Design For Embroidering a Handkerchief Case in Envelope Shape. The scalloped edges are designed to be padded and buttonholed; the sprays of leaves worked either in solid embroidery or as eyelets; the stems to be outlined, and the round dots in solid work or as eyelets.

Cut a strip of material thirteen inches long by ten and a half inches wide, stamp the flap on one end and fold to form the case illustrated.

To pad the scallops rapidly and effectively, cut a skein of thread, apply two or more strands over the center of the stamped pattern, keeping within the lines; tack here and there in couching style, gathering the threads closely together at each point of the scallops, then proceed to buttonhole closely over this foundation. When making solid embroidery, first pad the stamped figures by darning backward and forward, lengthwise, and then cover closely with over and over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the dots as eyelets, first encircle by running a thread around the outline. Pierce with a stiletto and work closely over and over.

On medium-weight linen use No. 25 to 35 embroidery cotton; on finer linen, 35 or 40.



A Cover For Pin Cushion.

No. 762.—A Design For Embroidering a Cover For a Pin Cushion Four Inches Wide, Eight Inches Long, Having Scalloped Edges. Patterns for stamping the outer and under portions are given and the two are to be laced together. The leaves, dots and flowers all can be embroidered as eyelets or some as eyelets, some solidly, as preferred; the stems are to be outlined; the scalloped edges are to be padded and buttonholed; the slits for the ribbon are to be made as eyelets.

To make the leaves of solid embroidery, pad the stamped figure by darning backward and forward, lengthwise, and then cover closely with over and over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward. To make the leaves and flower petals as eyelets, first run a thread around the stamped figure, then cut a slight slit lengthwise, then crosswise, push back the material and work closely over and over. To make the dots as eyelets, run a thread round the outline, pierce with a stiletto and work closely over and over. When padding the continuous scallop of the edges, cut a skein of thread, apply two or three strands over the center of the stamped pattern, keeping within the lines, tack here and there in couching fashion, gather the threads closely at each point of the scallops; or work chain stitch within the lines, heavier at the centers, lighter at the points. Buttonhole closely over the foundation. Make the eyelet slits the same as the flowers.

Use 35 to 40 embroidery cotton when working on sheer materials; 25 to 30 for heavier linen.

Beautiful Small Sprays.

No. 761.—A Design For Embroidering Small Sprays of Forget-me-nots. Four transfers of each spray are given.

The flowers and leaves are designed to be worked in solid embroidery, the stems to be outlined.

When making solid embroidery, first pad the stamped figure by darning backward and forward, lengthwise, then cover closely with over and over stitches worked in the opposite direction from the padding. To outline the stems, take short stitches, keeping the needle toward the right and work upward.

Use No. 30 to 45 embroidery cotton on sheer materials, such as lawn, nainsook or handkerchief linen, and No. 25 or 30 cotton for heavier fabrics.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Made-over Room.

If a girl is longing for a set of new furniture for her room but cannot afford it, let her be comforted by the example of another girl. A new house, looked forward to for ten years, had been completed on the farm and newly furnished in part. Each of the girls had her own room and took much pride with it. Elizabeth is a trained nurse and so she usually has more cash on hand than Margaret, who has always stayed at home and invests her money in poultry, fruit trees, books or some farm improvement. Elizabeth spent over a hundred dollars on the furnishings of her room. The result was a heavy brass bed, a green velvet rug with pink roses in it, a bird'seye-maple dresser and rocker, all against a background of yellow. It was just such a room as may be found in any city flat where a woman has little individuality but a fair amount of money to spend.

Margaret led me next to her room with the remark: "I didn't have much money to spend on my room, but I love it. Really I like it better than Elizabeth's, and it cost me only a couple of dollars besides the work."

The room drew forth an exclamation of delight. No disappointment here. It was all beautifully simple and bespoke the individuality of its owner. The old-fashioned walnut dresser, bedstead, washstand and chairs, which had done service for thirty years, had been enameled white. Half a dozen braided and crocheted blue and white rugs lay on the floor. Several good pictures were on the blue-tinted walls. White muslin curtains were looped back from the windows. It was the kind of a room that rests you as soon as you enter and makes you long to linger.—Janet Thomas Van Osdel.

Correcting Her Watch.

Hubby was in a bad temper. He was late in getting up, and then he cut himself while shaving. So he reached the breakfast table scowling blackly.

"Look here, Mary," he said crossly to his wife, "you've made me late again, and I asked you specially to wake me up at eight."

"And I did call you at eight by my watch," said Mary calmly.

"Then your watch must be slow."

"Well, I can't help that. I asked you what time it was when you came home last night. My watch said it was two o'clock, but you said it was only midnight. So I set my watch right by you!"

"Actions, looks, words, steps, form the alphabet by which you may spell character."—Lavater.

Pick Out the Dyspeptic

You Can Tell Them Anywhere and Especially if You See One Eat.

A Stuart's Dyspepsia Tablet Will Digest Any Meal.

One of the saddest sights at a royally rich dinner is to see a man or a woman unable to eat because of dyspepsia.

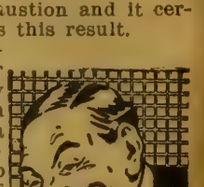
It is really a crime to continue this martyrdom when all one has to do is to eat a little Stuart's Dyspepsia Tablet.

"Too Bad."

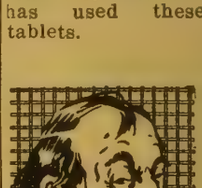
Just carry a tablet in your purse and after each meal eat it as you would a peppermint. It will digest the meal and surely convince you that food will not hurt you.

One grain of the ingredients which compose a Stuart's Tablet will digest 3,000 grains of fish, soup, coffee, ice cream, meats, vegetables and pastries. The whole idea of this great natural digester is to aid nature to do her work without exhaustion and it certainly accomplishes this result.

Stuart's Dyspepsia Tablets are our best known remedy for all stomach and dyspepsia troubles. It is positively wonderful to see the way one of these little tablets will digest a meal. And no one can realize it until one has used these tablets.



"I Used to be Like Him."



"I Know I'll Be Sick."

Every drug store sells Stuart's Dyspepsia Tablets and sells them in huge quantities. No matter where you are located you may go to any druggist and buy a 50c. box that will last you a long time. Absolutely convince you dyspepsia can be prevented.

Many thousands of people use these tablets occasionally just to keep their digestion always perfect. If you stay up late or overeat then take a tablet before bedtime; there will be no horrible dreams or bad mouth taste. Go to your druggist now and buy a 50c. box and go armed against any kind of stomach trouble.

Not Her Mind.

Young Van Winkle waited nervously in the parlor for Julia to appear. He had been sitting there, twiddling his thumbs, for half an hour. Finally a step was heard in the hall and he rose to his feet expectantly.

But it was not Julia. It was her maid.

"Marie," said the impatient young man, "what keeps your mistress so long? Is she making up her mind whether she'll see me or not?"

"No, sir," answered the maid with a wise smirk. It isn't her mind she's making up."

"You may depend upon that he is a good man whose intimate friends are all good."—Lavater.

MAY MANTON PATTERNS.

Easily Made, Advance Styles, Fashion and Perfection—The Standard of the World.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original In this edition we present for consideration very seasonable patterns absolutely up-to-date, with directions for ordering. The price of each pattern is 10 cents.

No. 7999.—Fancy Draped Coat. 34 to 42 bust.

No. 8019.—Tucked Blouse For Misses and Small Women. Sixteen and eighteen years. With or without revers, with long or three-quarter sleeves.

No. 8015.—Semi-Princesse Gown. 34 to 42 bust. With or without trimming portions, with long or short sleeves, with or without inverted pleats at sides.

No. 8014.—Two-piece Draped Skirt. 22 to 30 waist. With high or natural waist line.

No. 7969.—Tucked Blouse. 34 to 42 bust. With or without yoke on back, with rolled-over or straight cuffs.

A Fine Assortment of Aluminum Ware

As a Subscription Premium in Connection With The National Farmer and Stock Grower, the Best Monthly Farm Paper.

Aluminum utensils have no equal as sanitary cooking vessels, and their light weight makes their use a pleasure. They will not rust, tarnish or chip, and will last a lifetime.

The assortment we offer, as illustrated above, consists of the following: Egg Separator, Coffee Strainer, Funnel, Measuring Cup, Salt Dredge and Tea Strainer, all of high quality, and of practical use in every kitchen daily.

SEND US ONLY 60 CENTS

And we will send you THE NATIONAL FARMER AND STOCK GROWER, the reliable and practical farm monthly, for a full year, and send you postpaid this splendid assortment of aluminum ware as a premium by parcels post. Satisfaction and safe delivery guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

No. 7997.—Blouse in Balkan Style. 34 to 42 bust. With long or three-quarter sleeves, straight or diagonal closing, with or without draped or plain belt.

No. 8001.—House Gown. 34 to 42 bust. With three-piece skirt, three-quarter or long sleeves, curved or straight front edges, perforated for walking length.

No. 8022.—Three-piece Skirt. 22 to 30 waist. With high or natural waist line, with or without pockets and tabs.

No. 7877.—Two-piece Skirt. 22 to 32 waist. With high or natural waist line.

The above patterns will be mailed to any address by the Pattern Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Distinction in Dress.

The majority of women do not realize that it is by elimination rather than by addition that the distinctive note in dress is attained. Too often trimming is piled upon trimming with no thought as to its value from an artistic standpoint. Every added bit of fussiness costs money and its equivalent time. So those who have the least money should be the ones of all others to adopt the simplest styles. Quality should take the place of quantity. It is better to spend thirty dollars for a suit that will last three seasons than ten dollars for a new suit each year that will not look really well through one season. Only the best materials should be bought and they should be shrunk and sponged before they are made up. The garment should be made to suit the individual rather than to suit some freak of fashion. If the figure is short and broad, the gown should be so made as to accentuate the up and down lines; if it is tall and angular, a broad effect should be striven for. One of the sins against good taste is that of overloading a dress with trimming. Rows and rows of braid or dozens and dozens of buttons are not beautiful. Let the beauty lie in the texture of the goods and in the color and lines of the gown. Often a color needs a bit of some contrasting color to bring out its full beauty. But the color may be killed by a great quantity of the contrasting material.

In the matter of hats more than in any other article of dress is incongruous and inartistic trimming noticeable. But those who find it a difficult matter to know just how far to go in the addition or elimination of trimming, a good rule to follow is to add trimming only when there is a good reason for it and the hat or garment is vastly improved by it.

If they look nearly or quite as well without it, leave it off. There is little danger of violating good taste by undertrimming; there is every danger of violating it by overtrimming.—Janet Thomas Van Osdel.

Have a Berry Patch.

"A berry patch is almost a necessity to supply fruits and to tempt the appetite in the spring. Berries are wholesome fruit and farmers can ill afford to deny their families of these foods."—Toronto Sun.

MR. FARMER, Here's Foot Comfort and Economy For You!

At Last! A Thoroughly Practical Metal Sole Shoe; a shoe that is easy on your feet; keeps them warm and dry; is snag-proof and water-proof, and will outwear several leather sole pairs.

THE ALUMINUM SOLE SHOE

allows a buoyant, natural step. The bar on the sole does away with walking flat-footed. By all means learn about this shoe. It was brought out for your particular benefit. It will insure you foot comfort such as you have never enjoyed before and save you money. Hair-felt insole makes a soft cushion for the feet. The pliable grain leather top is made to wear. The bottom is indestructible. Injury to the feet is impossible.

Send For Free Booklet "Shoe Talk."

Be sure to get this book; it's shoe sense boiled down. It tells you all about this great work shoe; shows you how to cut your shoe expense and walk with pleasure. Write for it today. It's free.

PREPARING A HOTBED.

Work of Preparation Should Begin in the Fall—Care Necessary in Seeing That Temperature is Right Before Seeding Takes Place.

Of the several types of hotbeds in general use, the sunken or pit type is, all things considered, the best for the raising of early plants from seed, says Rural New Yorker. This style of bed is constructed by excavating a pit six feet wide and two and one-half feet deep, and as long as necessary to accommodate the number of three-by-six-foot sash it is desired to use. The sides of the pit are boarded up with rough lumber nailed to posts which may be placed three feet or more apart. If some degree of permanency is desired, good material will need to be used. The sides of the pit should be raised above the surface of the ground twenty inches at the back and twelve inches in front; this will provide ample pitch to the sash for shedding rain and also be of sufficient angle for good construction of the sun's rays and heat; good sash should be used. Those with three rows of 10x12 double-strength glass are much preferred to those with smaller single-strength glass, as they are heavier and more rigid and are not so liable to damage in handling and by hail, besides they admit a larger volume of light and gather more heat from the sun than can possibly be secured with sash containing a greater number of rows of small glass.

The location of the hotbed should be chosen where the natural drainage is good, and if possible where there is a good wind-break at the north side. If a suitable sheltered spot is not available, then a tight board fence six feet high and extending several feet beyond each end of the hotbed should be erected to break off the cold north wind. Without such a wind-break it will be almost impossible to raise early plants successfully in the hotbed. The wind-break should be about five feet away from the north side of the frame.

The heating material for the hotbed should be horse manure fresh from the stable, to which should be added when accessible one-half its bulk of forest leaves. If these are not available, straw or hay may be used. The manure and added material is to be thoroughly mixed and formed into a conical heap to undergo fermentation. In the formation of this heap it should be trodden down in successive layers of a foot in depth until the heap is four feet or more in height; the base of the heap should be of sufficient diameter to insure good fermentation in the severest winter weather. All the material used for heating should be well dampened before putting it in the pile, or the fermentation will not be evenly distributed. Care must be taken that no frozen material is put in the heap, or fermentation will be slow and may greatly interfere with the operator's plans of an early sowing of seed.

A few days after the heap is formed a lively fermentation should take place. This will be indicated by the escaping steam. As soon as this is plainly noticeable the heap should be forked over, shaking out the material and reformed into another, but similar pile. In three or four days the second fermentation will take place, when it may be placed in the pit to the depth of two and one-half feet, spreading the material out evenly and beating it down with the back of the fork, also treading it to a medium compactness with the feet as the material is put in. Be sure to tread carefully around the edges to see that there are no uneven or loose soft spots. The whole bulk of heating material must be as near the same solidity in all its parts as possible, or the top level of the soil will be of uneven depth and temperature. After the heating material has been placed in the pit, the sash are to be placed on the frame and a thermometer plunged into the manure. If the work has been properly done, the heat will rise to about 100 degrees in a day or two. This is too hot for almost any vegetable growth; besides the strong steam emitted by the fermenting material should be allowed to pass off before the beginning of seed sowing. No seed must be sown until the violent heat recedes. Watch the thermometer in the manure and as soon as it goes down to about 90 degrees place five inches of soil on the manure. If it is desired to sow seed directly in the frame, this soil should be compost, made of two-thirds good garden loam and one-third well-rotted manure, composted the previous fall and placed under shelter to prevent freezing, so it will be available when wanted for use. When the soil has become warmed through, seed may be sown.

Texas Anti-monopoly Law.

Attorney-General Looney has notified every cotton-seed oil mill in Texas owning cotton gins that they must dispose of their gins at once, as such ownership is in violation of law and is not authorized by their charters. The Attorney-General states that the practice gives the oil mills an opportunity to unduly control the seed supply. The oil mills were further notified that they must must not deal in bagging and ties and must stop fixing the prices paid for cotton seed.

5 YEAR GUARANTEE

98 CENTS POST PAID

To advertise our business, make new friends and introduce our big catalogue of Elgin watches we will send this elegant watch postpaid for only 98 cents. Gent's size, high grade gold plate finish, lever escapement, stem wind and stem set, accurate time keeper, fully Guaranteed for 5 Years. Send 98 cents today and watch will be sent by return mail. Satisfaction guaranteed or money refunded. ARNOLD WATCH CO., Dept. 112b, CHICAGO, ILL.

Barbed Wire Bargains.

On page 10 will be found an advertisement of barbed wire bargains offered by A. J. Child & Sons Mercantile Co., 517 Main street, St. Louis, Mo. This wire was under water in a car, otherwise it is as good as new. Messrs. Child & Sons say that those who wish cheap wire had best get in at once.

The American Washer Company.

A voluntary word in favor of a St. Louis enterprise is in order. The Awco is a washer designed to lighten the household labor on the farm. It is illustrated on page 23. We recommend that the mechanical ingenuity of this invention be thoroughly investigated. Write to the American Washer Company, Dept. 3617, 118 Sidney street, St.Louis, Mo.

"The most manifest sign of wisdom is continued cheerfulness."—Montague.

THE CROSSED FINGERS.

He swore that her kiss was the first he had had;
But his fingers were crossed!
He'd kissed but his mother, when he was a lad;
Yes, his fingers were crossed!
He vowed that not only he'd ne'er had a taste
Of quivering lips, but that no other waist
Had ever been clasped by his arm. Then in haste
His two fingers he crossed!

The sparkler he gave her he'd purchased that day—
But his fingers were crossed!
No previous maiden had worn it—nay, nay,
But his fingers were crossed!
And never, so long as his life should endure,
Would eye, cheek or lip of another maid lure—
He knew it—past every doubt he was sure—
But his fingers were crossed!

She listened to all of the buff he had said,
While his fingers were crossed!
She laid on his bosom her wise little head
While his fingers were crossed!
She answered so low that the famed "little bird"
Who peddles sweet secrets could scarcely have heard,
As she breathed: "Oh, my love, I believe every word!"
But her fingers were crossed!
—London Tit-Bits.

LOOK OUT FOR HIM.

A little wind creeps whining to my door;
I hear its feeble hand upon the latch,
But soon great Boreas, with angry roar,
Will come this way and leap upon my thatch.
Then down my smoking chimney he will shout,
He'll taunt me, and my cabin he will shake,
He'll dare me as a foeman to come out—
At his wild rage the poor are wont to quake.

For Boreas as cruel is as strong;
He'll do his best to stab you through and through;
He blows old winter's trumpet, and his song
He means shall fill with fear the heart of you;
Or else—beware!—he'll spread a mantle white
And deck you with his diamonds so brave;
He'll robe you like a king for his delight—
Then cast you in a glittering jeweled grave!

So, little wind, that's whining to get in,
Begone! Full well I know you are a spy,
For Boreas, who is crueler that sin,
Is prowling, slinking dangerously nigh.
Oh, wind! Go tease the sailor on the sea,
Hang clouds upon the bald pate of the moon—
Just run along and do not bother me;
You'll drive me to the coal man all too soon!
—Chicago News.

THE THINKER.

Back of the beating hammer
By which the steel is wrought,
Back of the workshop's clamor
The seeker may find the Thought,
The Thought is even Master
Of iron and steam and steel,
That rises above disaster
And tramples under heel!

The drudge may fret and tinker
Or labor with lusty blows,
But back of him stands the Thinker,
The clear-eyed man who knows;
For into each plow or sabre,
Each piece and part and whole,
Must go the brains of labor,
Which gives the work a soul!

Back of the motor's humming,
Back of the belts that sing,
Back of the hammer's drumming,
Back of the cranes that swing,
There is the eye that scans them,
Watching through stress and strain,
There is the Mind which plans them—
Back of the brawn, the Brain!

Might of the roaring boiler,
Force of the engine's thrust,
Strength of the sweating toiler,
Greatly in these we trust;
But back of them stands the schemer,
The Thinker who drives things through.
Back of the job—the Dreamer
Who's making the dream come true!
—Berton Braley, in American Magazine.

A THANKSGIVING DIARY.

At seven Maw says: "Get up, Ted!"
And I just jump right out of bed;
I know 't wud never, never pay
To cross my Maw Thanksgiving Day.
At eight I hear Paw sayin' grace
And I run up and take my place;
But you can bet I'm eatin' light,
Just sayin' up my appetite.
At nine I take a basket and
Run across the stubble land;
And as I dig the celery prime,
I kind of wish 't was dinner time.
At ten I get a glimpse of Maw
A-fixin' up the turkey raw;
She's pilin' in the stuffin' rich
And sealin' with a needle stitch.
Eleven! I hear the rollin'-pin,
And when Maw turns I just sneak in,
And crouch where I can smack my tongue
Each time the oven door is swung.
At twelve I run a mile or so
Until I feel my cheeks aglow;
And I could almost eat a bear
Fried on a spit with claws and hair.
At one Maw heads the table and
My Paw says grace, and we all stand;
I fail to bow—I see Maw frown—
And then at last we all sit down
At two—I just passed up my plate
The seventh time, and at this rate
I'll clean each dish, but Maw she knows,
(I'll eat it when the company goes).
At three they've all gone out but me
And I am as full as I can be;
Yet I can't help but climb a seat
And reach a pie and then retreat;
At four I'm awful, awful full,
And I can feel the threads of wool
A-stretchin' every time I rest—
A button just went off my vest!
At five I fall asleep and dream
I see a purple dragon team
Come rumblin' down a flaming trail
Where golden owls and red bats sail.
At six I feel a crampy pain,
And see those awful bats again;
Then some one gives a solemn sigh:
"The chances are the child will die."
At seven comes the med'cine and
I feel the doctor's steady hand;
The blanket's kicked up in a heap
An then I just fall off to sleep.
Next day! I'm up and well again;
It was an awful night of pain;
But I am game and I will say
I wish it was Thanksgiving Day.
—Puck.

CUPID'S DISABILITY.

One never feels quite certain whether
The lives that Cupid knits together
Will stand the wear and tear of travel,
Or whether they will soon unravel.
His so-called knots turn out mere hitches,
And frequently he drops the stitches.
Perhaps it is the part of kindness
To place the blame upon his blindness.
—George B. Morewood, in Judge.

Pets, Not Prisoners.

Baby likes pets; of course it does. It is human nature to be interested in life. And the more affectionately it handles them the more will its sympathetic nature be developed. But it is one thing to be delighted with the birds or animals, and quite another to so treat them that they will be happy.

The old hen and chickens make ideal pets for baby, because they are themselves entirely enjoying the domestic life. Even Polly Parrot, when given the liberty of the entire house and garden, may be said to be fairly well contented. And yet, how would baby, how would you yourself like to be an exile, with not one of your kin or race in sight or sound? Polly would no doubt enjoy life much more completely in her native wilds and with birds of her own kind.

The caged bird is only a prisoner. Let baby have bird pets in abundance—all the native birds that can be enticed about your home. Let it enjoy their most joyous songs, their nest building, their fleetness of wing. Some evergreen trees in the yard are an invitation to the earliest spring arrivals and to the winter lingerers. Crumbs scattered on the window sill, a piece of suet in the tree during the winter months, a drinking cup always filled with water in summer, these are a few of the ways to have pets. But prisoners in a gilded cage —these baby should have no use for.—Bessie L. Putnam.

ROPP'S COMMERCIAL CALCULATOR.

Free Book That Figures Your Farm Problems.

You don't have to "guess" about the worth of your hogs or steers, or how much wages to pay your help. Ropp's New Calculator will give you the answer to any problem that is liable to arise in your business or on your farm. It will save you hours of figuring and can be depended upon absolutely.

If you want to become an expert in figures you can do so. Ropp's New Calculator contains 160 pages, bound in cloth. The book sells regularly at 50 cents a copy, but is given free by the Keysone Steel and Wire Company, 5528 Industrial street, Peoria, Ill., in connection with their Square Deal Fence Catalogue. They will send both books free and postpaid to all who are interested in fence. See page 15.

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

His Presence of Mind.

Everyone in the lounging room, with one exception, had been holding forth on his own personal bravery and presence of mind. Everybody with the same exception had recounted at least one hair-raising episode in which he figured as the embodiment of cool courage.

At last the silent exception was asked if he had never had cause to exert his presence of mind.

"Only once," he replied, yawning, "I had dropped into a circus to pass away a couple of hours. It was a bright little show and the performing elephants were particularly wonderful.

"Suddenly there was a shriek from the women. The biggest elephant had escaped from his keeper and was making for the most crowded part of the tent, where I happened to be sitting, by the way. There was a stampede of frightened people. The shrieks of women and children filled the air; strong men fainted and pandemonium reigned supreme."

The silent one's listeners gasped.

"But I am proud to say," continued that gentleman, "that I kept my head, and, in consequence, escaped unhurt."

"What on earth did you do?" somebody asked.

"I? Oh, I just kept on running behind the elephant!" — Post-Dispatch.

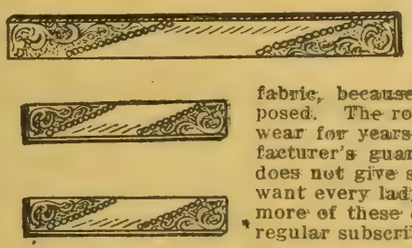
Elegance and Economy.

All our readers should send for the Fall Style Book issued by the National Cloak and Suit Company, advertised on page 3. By so doing you will insure elegance with economy. Sign and send in the coupon.

Rolled Gold Plate Waist Pins

Given as a Free Premium With the Charming Monthly Publication, the UNIVERSAL MAGAZINE.

This beautiful Pin Set, as illustrated, consists of a large Pin (2¼ inches long) and two smaller Collar or Cuff Pins. They are unbreakable, the back being formed of one piece, the rolled gold plate front then being rolled on, making the entire Pin practically one piece. They will not catch in the hair or fabric, because no sharp points or edges are exposed. The rolled gold plate front is warranted to wear for years without tarnishing, and the manufacturer's guarantee is with every Pin, and if it does not give satisfaction it will be replaced. We want every lady reader of this offer to have one or more of these dainty Waist Pins, also to become a regular subscriber to our



UNIVERSAL MAGAZINE.

This publication is a bright, clean, home monthly, containing sixty-four pages each issue of choice short stories, fashions, patterns, poetry and other matter interesting to the household. Send us 30 cents in stamps, money order or coin, and we will enter your subscription for one year to the UNIVERSAL MAGAZINE, and we will send you as a free premium either the one large Pin or the two smaller Pins, as you may select, postpaid; or, better still, send us 50 cents for a two-year subscription and we will send you the full set of three Pins as a free premium. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Watch Your Pimples Go Away

Then Feel the Ecstasy of Delight When Your Complexion Is Made Perfect By Stuart's Calcium Wafers.

Don't worry about your pimples. Stop that heart ache and regret. Just make up your mind that you are going to use Stuart's Calcium Wafers and make pimples vanish.

"I Don't Look Like I Did Since I Used Stuart's Calcium Wafers."

The pores of the skin are little mouths. Each has a sort of valve that opens into tiny canals connecting with the blood. These mouth-like pores become closed. When these canals fill up, the valve refuses to work and pimples, blotches, rash, tetter, liver spots, etc., appear.

Stuart's Calcium Wafers keep the pores open and the canals then carry off the waste matter the blood empties into them.

Don't use cosmetics. They will not hide pimples long, and then they clog the skin. You ought to know that the skin breathes in air almost like the lungs. The pores throw off impurities every minute of the day. To plaster the skin with paste, etc., is to actually prevent nature doing her work.

Stuart's Calcium Wafers will in a very short time cleanse the blood, open the pores and remove all blemishes so that your skin will become of a peach and cream kind so much desired.

Stuart's Calcium Wafers can be carried in purse or pocket. They are very pleasant to the taste and may be purchased anywhere at 50 cents a box.

Look at your pimples and unsightly skin in the right way as a disease of the blood and pores and use Stuart's Calcium Wafers to give you the complexion you want.

Great - Great - Grandmother Blake's Thanksgiving Dinner.

"To begin with," said Grandma, as she settled down to tell about great-great - grandmother's Thanksgiving dinner at the request of the younger generation, "Grandmother Blake had to start out her invitations many weeks ahead of the day set for the dinner. There were no trains in those days and so letters had to be dispatched by messengers on foot or horseback, depending on the distance. And of course there were no telephones. Nor did Thanksgiving Day extend through all the settled part of the country then as it does now. It was only in the New England States that the day was observed, and the reason Thursday was chosen to start on was because it gave the housewives a good three days to get ready for the feast and then two days to get things to rights before the Sabbath.

"Once her invitations were out, Grandmother Blake and her three daughters got down to business of starting to get ready for the dinner. I was little and had to do the running from cellar to attic. Remember that in those days everything was home-made. You couldn't run to town at the last minute and buy bread or cake or canned stuff or flour. You couldn't even buy yeast nor matches. So it took a day's work then where it takes an hour's now. I remember that a privileged task fell to my lot. It was that of feeding the Thanksgiving turkey for the last fortnight before the feast with rice that had been cooked in milk. This gave a whiteness and sweetness to the flesh that isn't found in a grain-fed fowl. Another task was that of seeding raisins, pounds and pounds of them, for the mincemeat and cakes. Then there was the chopping up of apples and meat for the mince meat.

"Of course, grandmother had no cook stove, but she had a splendid earthen oven that would turn out the best-tasting food ever was. The fire was built right back of the oven and left to burn for quite a while until the oven was well heated up. Then it was let go out, the ashes were cleaned away and the oven was ready for use. It took a long time to heat the oven, but it held the heat for an equally long time, and grandmother could do three bakings in it before it lost its heat. As I said before, there weren't any matches then, and so a spark of fire had to be treasured over night or else a light struck from a flint the next morning.

"Your Thanksgiving dinner is considerably different from what Grandmother Blake's was, even when you think you're serving a regular old-fashioned dinner. She made more of pies than you do. Why, I've known her to bake over a hundred at a baking, but of course this was partly because it was such a task to get the big oven to a baking heat. And then, too, it was such a difficult matter for company to come from any distance that they were likely to make some stay, and so it was well to be prepared for them. There were no lemon, cream or fancy custard pies, but pumpkin, mince, apple, cranberry and dried berry pies. It wasn't expected that this batch of pies would be eaten in a couple of days. Maybe half of the mince and fruit pies would be set out to freeze and then they were put away in a cold place until they were needed, maybe several weeks or a couple of months later, when they were heated and were almost as good as fresh baked pies. We generally had pudding as well as pie for dessert at the Thanksgiving dinner. For vegetables there were turnips, squash, onions and baked beans. No tomatoes were on the tables in those days, for the tomato was only a big, ornamental berry grown in with the flowers and considered poison if tasted. Nor was there corn or peas or any kind of canned vegetables. There was usually a piece of boiled meat or a baked ham to be served as a side meat with the turkey.

"After the dinner, when we gathered around the big fireplace in which whole logs snapped and crackled, the news of the past months was discussed while we drank cider, ate apples and cracked nuts. There were no newspapers circulating freely at that time and the important news was carried mostly by word of mouth. Those big gatherings were a rare treat and every bit of conversation was listened to with respect, for men and women went often for weeks without seeing the immediate members of their own families except when they attended church, and then secular matters were not discussed.

"All too soon came candle-lighting time. The candles, too, had been made by our own hands. Then we children were taken up into the big, freezing bedrooms that had no heat from early fall until spring.

"Yes, they were good old times that turned out strong men and women, but to my mind they were not one-hundredth part so comfortable as your own times, dearies. And it's my opinion that you women of to-day have a heap more to be thankful for than did your Great-great-grandmother Blake." — Janet Thomas Van Osdel.

The New House Cleaning.

House-cleaning time is again at hand, and amid all the new-fangled ways for doing things, perhaps after all there is no greater innovation than this. We used to beat and sweep and pound, anything to get the dust out. And now the process is quite the reverse, and all summed up in the single word, suction.

The advantages are several, some of them self-evident, and others requiring the use of the new machines before we really and fully appreciate their advantages. Of course, one can readily perceive how much more convenient it is to suck the dirt all into a little compartment, from which it can be removed and disposed of at leisure. But did you ever think how much danger from germs is thereby saved? Just a few days ago we read an article by Elbert Hubbard on the germ dangers of the Pullman, and the thought was brought out that the little whisk broom, for the using of which you pay the colored porter a generous tip, is a veritable scourge, which is bound to go before long; just a medium for scattering the germs which some one else may have left and giving you a share!

The ordinary house-cleaning process is likewise a scattering of dust and germs and what not! Some of them get drowned in your scrubbing process; some lodge and grin at your best efforts. But when they get in the wake of a strong suction power they come, be they just harmless dust, disease germs of moths and other insect pests. The latest is to use this same power as a fly destroyer! But when we stop to think that if we should go over the carpets every day or even once a week, the semi-annual cleaning would be a very much smaller matter, then the worth of the vacuum cleaner and what it may do for us comes into view. In the cities this is a regularly-adopted process of keeping the house in order. And we may rejoice that it is fast working into the country homes.—Bessie L. Putnam.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Chester White Sow.

Pocket Piece, No. 20,015, Chester White sow, grand champion of the Illinois State Fair, 1913, was sold by J. W. Brendel, of Zionsville, Ind., to Chas. D. Ettinger, Maple Farm of Midlothian, Tinley Park, Ill., at the record price of $500.

More Vital Energy For You

MAGNETIC SHIELDS fill the system with MAGNETIC FORCE, which does what all the medicine on earth cannot do. It gives life, energy and tone to the blood and nerves, MAKING THE BLOOD CIRCULATE VIGOROUSLY, overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases, but in multitudes of cases, where people say they have been cured of Paralysis, Rheumatism, Lung Trouble, Kidney, Liver, Stomach and Bowel Troubles, Nervousness and most every other form of disease after medicine failed.

Our MAGNETIC ABDOMINAL AND KIDNEY VITALIZER for ladies and gentlemen, here illustrated, is only one of the many shields we make. IT IS A WONDERFUL INVENTION, scientifically constructed, and floods the system with magnetism, supplying LIFE, STRENGTH and VIGOR, to the BACK, KIDNEYS, STOMACH, LIVER, BOWELS and BLADDER, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply. Your health depends upon a good circulation.

Fill Your System With This Magnetism

Write today for full information and free book, "PLAIN ROAD TO HEALTH," by C. I. Thacher, M. D. Describe your case fully, we advise you free how to apply MAGNETISM for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 515, 110 South Wabash Avenue, Chicago, Ill.

The Girl of the Longstone Lighthouse.

"Gracie, come from the window to your supper. The wind's blowed afore this if I remember rightly."

"Yes, mother," answered the girl as she gave a last look out the little window which showed only the dreary whinstone stretching away on all sides. Well did Grace know every bit of Longstone, to which her father had brought her when she was eleven years old at the time he was made keeper of the lighthouse on the lonely island. Before that she had lived on another of the Farne islands almost as dreary. That dark whinstone, instead of grassy meadows, had been her playground. The ropes of seaweed which the tides washed up into the dells were her flowers, for no green things grew upon the rocks. The screaming of the sea birds was the only bird music her little ears had ever heard.

"Yes, mother," repeated the girl, seating herself at the table. "There have been storms before, but I feel so different about this one. But father's at the light, so why should I fear?"

After the simple supper was over the girl ran up the stairs leading to the lamp to give her father a word of cheer. No neighbors lived on the island, and this little family must be all in all to one another.

"A wild storm, eh, girl?" said the father as Grace appeared." But this tempest's been wearing on you. Go to bed and come up early in the morning. I'll need a bit of rest then myself."

Though Grace obeyed her father, she could not sleep. Hour after hour passed and she lay listening to the storm. In the early morning she fell into a light sleep but was awakened by what seemed a cry for help. Hastily dressing, she sped to the tower and called for her father's spy-glass.

Already the man had seen the disaster. A ship had been broken upon the rocks and to the masts were clinging the forms of human beings.

"Can't you take out the boat, father?" cried Grace.

"It'll be but two more lives added to those out there, girl!" groaned the man. "Our boat couldn't live in such a sea!"

"We can but try, father," said the girl. Her brave pleading won, for he helped her launch the boat and sprang in beside her in spite of the weeping of his wife, who was sure she had seen the last of her dear ones.

Against the fearful sea the frail girl and the stalwart man fought, the boat tossing about like a chip on the current of a stream. It seemed impossible that their tiny efforts could win the battle, but the uplifted whispers for help were answered and the wreck was reached in time to save the nine persons still clinging to it. The rest of the crew, except for a few that escaped by boats, had already perished.

The home light never looked so dear to Grace and her father as on that return trip. They finally reached it worn to exhaustion. Even then the brave girl's work was not done. The sufferers must be cared for. Her own bed she gave to Mrs. Dawson, who was sick with pain and the grief of losing her children on the ship.

When the news of the rescue went out from the Farne islands Europe was aroused. Letters of thanks and praise, medals and money were showered upon the girl, who received them in astonishment, for Grace Darling laid no claim to being a heroine. "Why, what else was there to do?" she asked.—Janet Thomas Van Osdel.

How He Was Sold.

The favorite game of the Southern negro is "shooting craps." A negro will "shoot" away anything from the clothes on his back to the meat on his table, but "shooting" for prospects is a new phase.

A capitalist was the guest of a Southern hotel, and the first night he gave his waiter a fifty-cent tip. At breakfast the waiter could not do enough for him, and he tipped him another fifty cents. At lunch he had a new waiter. The capitalist said nothing, but when the same new waiter served him at dinner that evening he asked:

"Sam, where's the boy I had yesterday?"

Sam hung his head. "He ain't at dis table no mo,' boss."

"I know that, but why was he moved? I liked him."

Sam looked frightened, but he stood his ground. "It was like dis, boss. After breakfas' dis mornin' we shot craps for dat fust fifty cents you give him, and I won dat; den we shot for dat second fifty cents you give him, and I won dat; den when his money was all gone, we shot for to wait on you, and I won you.'—Dry Goods Magazine.

"Thank You!"

A child did some trifling thing for the mother and was rewarded with a pleasant "Thank you!" It took but a moment to say it, and yet the little one appreciated the words and went about its play rejoicing. We soon discovered that this was a habit with the mother, and in fact with the entire family. Any little act which could be done for another, no matter how trifling the service, instinctively brought forth the two little words.

In another home the mother was bewailing the fact that she never could teach her little girl to thank for things. She had given her many verbal lessons, had bribed and punished, and yet the child was not dependable when it came to this little rule of politeness. In the one case the lesson had been taught in a way never to be forgotten by the habit of practicing upon the two little words every time an opportunity offered. In the other a set rule had been given, and some children have the faculty of never remembering to apply a certain rule at the proper time, while others are led into the fault of willfully forgetting it. Which was the easier way?—Bessie L. Putnam.

May and December.

It was a clear case of unrequited affection; but, despite numerous setbacks, Blinks persisted in his calls. The lady's name was May, but her attitude toward him was December. Her ten-year-old brother, Billy, received poor Blinks the last time he dropped in.

"Is your sister at home?" asked the suitor.

"No, she's gone out."

"Ah! so I've come to the cage only to find the bird has flown."

"No, you ain't," retorted Billy. "But you're like the month of June."

"How's that?"

"Every time you come in May goes out!"—Post-Dispatch.

The Lady Policeman.

"What do you think? That lady cop tried to kiss me and when I refused her she arrested me."

"Arrested you! On what charge?"

"Resisting an officer."

FOUR BEAUTIFUL FERNS

To be Obtained as Subscription Premium in Connection With either Our NATIONAL FARMER AND STOCK GROWER, a Splendid Monthly Farm Paper, or With Our Monthly UNIVERSAL MAGAZINE, a Gem of a Story and Literary Publication.

NOW IS THE ACCEPTED TIME.

We wish to deliver WITHOUT COST to your door in good, healthy growing condition a valuable assortment of beautiful ferns. We have secured them from fern growers who boast of the fact that their plants are entirely free from all injurious insects or disease which destroy foliage plants of this type, and are assured each individual plant is one of the finest ever produced. There is nothing that will add more cheer to the home through long, dark winter months than a few well-chosen house decorative plants, and those we offer comprised the very best varieties in cultivation, and of a size and quality that will quickly develop into beautiful specimens. We give below a description of each variety:

ROOSEVELT FERN.—This fern is a new variety recently introduced and one of the finest for house decorative purposes grown. It is of compact, vigorous-growing habit, producing in great numbers wide, massive fronds of good length, beautifully tapered from base to tip, that droop gracefully over the pot, hiding it completely from view. The pinnae or leaves of this fern are distinctly undulated, giving the whole plant an attractive, wavy appearance, which adds materially to its beauty. Without an exception, ROOSEVELT has proved the strongest-growing variety ever produced and withstands better than any other variety unfavorable growing conditions of indoor culture found in the average home. A small plant requires but little care to quickly develop into a finished specimen of rare beauty.

BOSTON FERN.—This fern is one of the oldest and best known varieties grown, and in the long years of its cultivation has proven well worthy of a place in every home. It is known by some as the "Fountain Fern," which name it derived from its graceful drooping habit of growth, and until the recent production of the ROOSEVELT Fern was acknowledged the finest of its type. It is a very rapid grower, producing fronds of unusual length, frequently measuring from six to eight feet, and its freedom of growth without special care has made it popular with all who admire beautiful house plants.

THE ROOSEVELT FERN.

WHITMANI FERN.—This charming creation caused a real sensation among lovers of plants, each frond being as delicately and finely cut as the most perfect Ostrich Plume, by which name it is commonly known. It is a very vigorous grower, constantly unfolding new fronds of fine, feathery foliage, entirely distinct from any other variety, and which quickly grows to a width of from ten to twelve inches. The foliage is of good, substantial texture that withstands the abuse to which house plants are subjected, and so compact that each frond appears as one massive Ostrich Plume. WHITMANI is one of the few feathery foliage ferns with which everyone can succeed in growing to finished specimen plants under the average unfavorable growing conditions of the house.

ASPARAGUS PLUMOSUS.—A plant for all purposes, rapidly adapting itself to any conditions. Its rapid, sturdy growth, combined with its exquisite, lacy foliage makes it a plant of such airy grace and value as to be desired by everyone. The bright, rich, green fronds are as fine and delicate as the most beautiful lace, by reason of which it is given the name "Lace Fern."

OUR SUBSCRIPTION PROPOSITIONS.

We publish two papers. No. 1 is the monthly NATIONAL FARMER AND STOCK GROWER, the best farm publication in the United States. It furnishes good, instructive reading that will help farmers, stockmen, poultrymen, dairymen, fruit and vegetable growers in any state. The price is 50 cents a year, and anyone who will send us 50 cents to pay for one-year's subscription can select a set of ferns as a free premium, and we will send them fresh from the fernery, safe delivery in good order guaranteed.

Our second publication is the UNIVERSAL MAGAZINE, a bright, little pocket publication of sixty-four pages, two columns to the page. It contains good stories, poetry, fashions, embroideries, illustrations, and is well worth the price, which is 25 cents a year. Anyone who will send us 50 cents to pay for the UNIVERSAL MAGAZINE for two years can select our set of ferns as advertised, and we will send them at once as a premium, safe delivery and good condition guaranteed. Time is flying. Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Overland

$1075

With Gray & Davis electric starter and generator

Value up! Price down!

THE infinite advantages and manifest economies of large, unrestricted automobile production must be clear and evident even to those who have neither experience nor conception of what governs, controls and limits a manufacturing institution. It is a certain and established fact that the largest automobile producer can readily get his manufacturing costs far below the "average" and thus undersell the "market."

Each year Overland *value has increased*—

Each year Overland *prices have decreased*—

Each year the Overland *output has been enlarged*—and it is the greater production that makes feasible an *increased car value at a reduced price.*

Our output for 1914 is 50,000 cars, which is the world's largest production on this type of car.

And every Overland value increase is just as visible, just as conspicuous and just as actual as the material reduction of our selling price. While other manufacturers refer you to more comfort, more grace, sweeter running motors and other *invisible* and more or less *imaginary* incidentals, *we give you in addition to more comfort, grace and beauty, increased value that is substantial and tangible.*

Look at the newest Overland.

The wheelbase has been *increased* to 114 inches.

But the price is lower than ever.

The motor is *more powerful.* It has been *increased* to 35 horsepower.

But the price is lower than ever.

The tires are *larger*—33 x 4 in. Q. D.

But the price is lower than ever.

The equipment includes such *costly additions* as electric lights all around—head, side and tail—even under the dash.

But the price is lower than ever.

The body is designed with *full cowl dash* and finished in *Brewster green* with lighter green striping and trimmed in polished nickel and aluminum.

But the price is lower than ever.

Then there are Timken bearings; a $40 jeweled Stewart Speedometer (set so that it can be read from the driver's seat), an electric horn, deeper upholstery, and an 18-inch steering wheel.

But the price is lower than ever.

And so we could go on, almost indefinitely, giving new additional features—new value increases—one after the other.

You had better see this car before you buy. Any one of our dealers will be glad to give you full details and a thorough demonstration.

There is an Overland dealer right in your town. Look him up today. We advise prompt action for in seven days after our 1914 announcement we had immediate shipping orders for over 5,000 cars.

Handsome 1914 Catalogue on request. Please address Dept. 89.

JEUN—Percheron stallion, American-bred. Champion at several State Fairs, notably Iowa and Nebraska, of 1913, and at some of the Fairs said to be the best horse ever seen on the grounds. Exhibited by W. S. Fox, of Genoa, Neb. The sire of JEUN is represented by a magnificent picture in our Book of Live Stock Champions advertised in this edition.

The Book of Live Stock Champions.

Attention is invited to the card on page 14 advertising the Book of Live Stock Champions. The pictures in the book include a good many of the champions at the Chicago World's Fair, and a majority of them were obtained from the most famous winners at the Chicago International Live Stock Exposition, which was first held in the year 1901, and at all State and National Fairs, until the Book was issued in 1912. There is absolutely nothing else to compare with this great book. It is beautifully printed, elegantly bound in blue cloth; there are 352 pages. It contains seven hundred and fifty pictures, which represent in single animals, pairs, groups and teams a clean thousand champions. The price is practically nominal.

and Stock GROWER

THIRTY YEARS AGO.

Incidents in Agriculture and Live Stock in the Year 1883, When Packing Houses Were Young and the High Cost of Living Had Not Yet Been Heard Of.

Thirty years ago the writer of this article was assistant editor of the Texas Live Stock Journal, and located at Fort Worth, where there was no live stock market, and the railroad terminus that had previously made Fort Worth a shipping point had gone beyond to Baird, to Abilene, to Colorado City, and finally to El Paso.

In agriculture, 1883 was not an eventful year. The corn crop was 1,551,667,000 bushels; wheat, 421,086.000 bushels; oats, 571,302,000 bushels; and hay, 46,864,000 tons, in fact, not far from half a total crop of the present day. As one of the items of note in the year 1883, the lowest wheat was 90 cents a bushel in October, and the highest price was $1.13 in June.

The year 1883 was in the period of transition from the trade in live cattle to the trade in dressed beef. At that time there was a contest going on. The live cattle shippers had the benefit of the railroad rebates, and the dressed-cattle operators were pushing forward.

Referring to the ocean business in meats, the London Mark Lane Express said: "The dead-meat traffic is beating the live-cattle trade in the United States, and it would beat it in the trans-Atlantic business if it had fair play."

During the year 1883 a good many Shorthorn cattle were sold at auction. On April 18th, R. Gibson, of Delaware, Ontario, Canada, and Rigdon, Huston & Son, sold Shorthorns at Dexter Park, Chicago, and thirty-two animals were sold for $33,645, an average of $1,114.35. The highest animal in the sale was the First Duchess of Hilldale, sold to Charles DeGraff, of Winona, Minn., for 6,000. In that year (1883) Roan Boy, Shorthorn steer, was champion of the American Fat Stock Show. Exhibited by C. M. Culbertson, of Newman, Ill., and the Allen Shorthorn Cattle Records were purchased by the American Shorthorn Breeders' Association for $25,000.

As a reminder to breeders of Hereford cattle, will state the famous bull The Grove, 3d, at nine years old, was sold by B. Rogers for $4,250, in England.

For poultry raisers it will be interesting to note that the Wyandotte breed of fowls received their name in this year. It was proposed by Mr. Houdlette, at Worcester, Mass. The breed was originated by Mr. John P. Ray, of Hemlock, N. Y., by a cross of a Sebright Bantam male with a yellow "Chitagong," which he named Sebright Cochins. Rev. A. S. Baker and Mr. Bexson also produced similar fowls.

Dairymen are reminded that in 1883 De Laval cream separators were introduced and sold in the United States. The best butter was then worth 36 to 37 cents a pound, and full cream cheese at 10½ to 12 cents. These figures representing quotations of November 30th. Live turkeys sold at Thanksgiving at 11 to 12 cents a pound, wholesale.

At St. Louis, during the month of November, William Childs, of Collinsville, Ill., marketed nineteen head of good steers, 1,384 pounds average, which were sold at $6.25 per 100 pounds by C. M. Keyes & Co. to Eastman. Another sale of good-weight cattle was by F. M. Mayes, of Mayesburg, Bates county, Mo., which shows that St. Louis at that early day was able to attract fine beef cattle from Kansas City. The Mayes cattle, thirty head, averaged 1,392 pounds, and sold at $6.05 per 100 pounds. A consignment of seventy-three steers, 1,220 pounds average, shipped by J. W. Byron, of Baldwin, Kas., sold at $5.90 per 100 pounds. These sales indicate what the native steer market was at that time. During the month of November, 1883, the highest Chicago quotation for heavy native cattle was $6.40 per 100 pounds.

In the quarantine cattle division the trade appeared to be quiet on account of the scarcity of cattle fit to kill. A sale of grass Indian steers, 916 pounds, at $4.10 per 100 pounds, indicated an average transaction, the top price being $4.25 per 100 pounds. During November, 1883, the Chisum Ranch, at Pecos River, New Mexico, sent in 283 steers that were classed as feeders, weighed 930 pounds average, and sold at $3.50 per 100 pounds.

Horsemen will be interested to know that this is the year of the birth of Ormonde, the celebrated thoroughbred. He was foaled at Eaton Hall, seat of the Duke of Westminster, in England. He died at Menlo Park, California, twenty-one years later. He started in sixteen races and won them all, including the English Derby, two thousand guineas, and St. Ledger. Wm. O'Brien McDonough, of California, paid $150,000 for him. He was a majestic bay, 16.1 hands, and considered to be the grandest thoroughbred of his day. This is also the year when the famous Jay-Eye-See trotted in 2:10¾ at Providence, R. I., establishing the world's gelding record. In 1883 the Southern horses sold at St. Louis from $60 to $100, and mules at $85 to $180. In this year (1883) the Percheron Horse Stud Book was established in France.

Sheep raisers were not rejoicing in 1883 any more than they are now. Prime muttons were quoted at $3.60 to $4.00 per 100 pounds. We noticed a sale of fat 102-pound sheep at $3.60 per 100 pounds. It was an advancing market for hogs, and the the top price of the month was $5.30 per 100 pounds. Butcher hogs, 225 pounds average, sold the best, and Yorkers were usually 30 cents below the top of the market.

The closing figures for cash corn in November, 1883, were 46¼ cents a bushel; oats at 29 cents, and wheat at $1.01 to $1.03. Prairie hay sold at $10 to $10.50; timothy at $10.50 to $14 a ton; potatoes at 35 to 40 cents a bushel; and onions at $1.40 to $1.50 a bushel.

Many of us are interested in these facts and reminiscences because we were actively engaged in farming or ranching at that time. Our office contains a stack of such information and it will be brought forth from time to time. In those days agricultural colleges were in their infancy; the tick was not known to be the cause of Southern cattle fever; there was no cotton-seed meal; St. Louis had never seen a ton of alfalfa; there was not a gasoline engine on a farm, and the disc plow had not been invented.

Corn From South America.

A telegram to the daily press dated November 10th stated that a cargo of 270,000 bushels of corn from the River Plate, South America, had arrived in New York.

First Corn Free of Duty.

From Galveston, Texas, it was reported that the French steamship Carol I. arrived on November 8th, bringing 192,000 bushels of corn from Buenos Ayres, consigned to an elevator company at Wichita Falls. This was the first corn imported into the United States under the new tariff and is the forerunner of heavy shipments.

Fortify Your Fertilizer

Did you see your fertilizer dealer and arrange to buy fertilizer containing at least as much

POTASH

as Phosphoric Acid? That is the real kind that pays you and the dealer. If you did not, you should at once ask your dealer to carry Potash Salts so that you may increase the Potash in the ordinary brands. To increase the Potash 1 percent, add 40 pounds Muriate or Sulphate of Potash to a ton of goods. A 200-pound bag will increase the Potash of a ton 5 percent.

Try it once and see how Potash Pays.

If your dealer will not carry Potash Salts, write us for Prices. We will sell any quantity from one 200-pound bag up.

Menhaden Oil For Paints.

"The most permissible adulterant of linseed oil, and its best substitute, appears to be menhaden oil. The menhaden is a fish somewhat larger than the herring, and is found in vast numbers in the West Atlantic ocean. The oil obtained from it is sometimes simply called fish oil; but one should distinguish between menhaden oil and whale, porpoise or seal oil, which are often called fish oil, and are worthless for paints. Boiled linseed oil is the best of all drying oils, and also the highest-priced. Menhaden oil is a good drying oil, and is much cheaper than linseed oil. If properly prepared with a drier by the manufacturer, menhaden oil is to be recommended for use with linseed oil in paints. Three parts of menhaden oil with one part of boiled linseed oil make a serviceable, rapid-drying paint for exterior work. It is excellent for smoke-stacks, boiler-fronts and other heated objects, since it does not readily blister or peel. Such a paint is not, however, to be used for ordinary interior work, as it gives off unpleasant gases. A good quality of menhaden oil has little or no fishy smell. One should beware of a fish oil for paint that has a marked fishy smell. Menhaden oil may vary in quality, just as linseed oil does, but the manufacturers usually aim to prepare a high-grade product which is sure of a ready market. Whether one buys paints ready-mixed or mixes them for oneself, the fact that a particular brand of oil or paint is guaranteed to contain a definite amount of menhaden oil should not prejudice one against its use unless the price is abnormally high, or it is found to be unsatisfactory after making a thorough test." —C. H. Vail, Colorado Agricultural College.

His Criticism.

Robert Louis Stevenson once took an eccentric acquaintance of his to hear Sir Charles Halle play the piano at St. James' Hall, London. Sir Charles was a musician of the most correct and severe British type, though a German by birth. After the concert was over they walked as far as the Marble arch, neither having spoken. Arrived there, the friend stopped and delivered himself thus: "The manner of the elderly statesman at the piano was somewhat austere and chilling." And then they walked on.

AMERICAN-NATIONAL.

Call For Meeting at Denver, Colo., January 20th, 1914, to Continue Three Days.

Seventeenth Annual Convention of the American National Live Stock Association.

Addressed to Members and All Live Stock Associations and Live Stock Producers.

An official call is made for the Seventeenth Annual Convention of the American National Live Stock Association, to be held at the Broadway Theater, Denver, Colo., January 20, 21 and 22, 1914, convening at 10 o'clock a. m., on Tuesday, January 20.

During the same week, January 19-24, 1914, the Ninth Annual Western Stock Show will be held at the Stadium at the Stock Yards, and, in order to afford our members and visiting stockmen an opportunity to attend both our convention and the Stock Show, it has been arranged to hold the sessions of our convention only in the morning on the days indicated; but, if necessary to conclude our business, an afternoon session will be held on Thursday, January 22. This will allow plenty of time to see the Stock Show in the afternoon and the Horse Show in the evening.

The week previous to our convention the annual meeting of the National Wool Growers' Association will be held at Salt Lake City, Utah, on January 15, 16 and 17, 1914.

The new tariff bill, placing live stock on the free list, was signed October 3, 1913, and went into effect on the following day. We were able to secure a satisfactory amendment, providing for adequate inspection of all imported meats on substantially the same basis as now applies to our domestic production. The effect that free meats and free live stock will have on our home prices, the world supply of meat-food animals, live stock conditions in other surplus countries, and the probable volume of meat imports into this country, will be thoroughly discussed at our meeting by well-informed officials of the government and representative stockmen.

There has recently been some complaint from several states that the rigid enforcement of the regulations of the Bureau of Animal Industry on the mange question is causing an unnecessary expense and hardship to the stockmen. In order that the whole mange question and its eradication, and the regulations of the Bureau of Animal Industry pertaining thereto, may be thoroughly discussed by all concerned, a conference will be held, at the time of our meeting, between the representatives of the Bureau of Animal Industry, the representatives of the various State Sanitary Boards of the West, and a committee from this association. All interested stockmen are invited to attend and participate in said conference.

Prospects for the passage of a land-lease law at the next session of Congress are brighter than ever before. Many of the sheep growers have heretofore opposed such a law; now the majority of them favor it. The unsatisfactory conditions resulting from the unregulated use of the open ranges have contributed in no small measure to the decrease of live stock in the West. This can be corrected by a lease law such as this association has recommended. Congress seems to have finally awakened to a just appreciation of the importance of such a law and its bearing on our future meat supply. This question and the various land bills now pending in Congress will be considered at our meeting.

Officers of the Forest Service at Washington will be present at our convention to confer with the National Advisory Board appointed by this association regarding any needed changes in the regulations governing grazing on the national forests. If any stockmen have complaints as to the administration of grazing on the national forests, they should arrange to attend our convention and submit their grievance to the committee of our association for proper action.

There are many other questions which will come up for consideration at the convention, among them the following:

Elimination of valuation clause in live stock contracts of railroads; speed minimum for live stock; causes pending before the Interstate Commerce Commission involving rates on live stock; delay in furnishing stock cars; railway service; meat-inspection law; prohibitive tax on oleomargarine; advance in commission charges for sale of live stock; and many other subjects of national importance to the stockmen of the West. The discussion of these questions will not be confined to the members of this association; any stockmen in attendance will be allowed to take part.

The committee in charge of arrangements for the convention and the entertainment of visiting stockmen is: A. E. de Ricqles, George W. Ballantine, James Brennan, Isaac Baer, Charles Fletcher, Frank C. Goudy, C. A. Gebhard, M. H. Mark, John W. Springer, F. M. Taylor and John F. Vallery.

The railroads have promised to grant reduced rates to our convention. Members will be advised in ample time by circular letter of basis of fares agreed to.

All live stock producers are cordially invited to attend our convention.

By order of the Executive Committee. H. A. Jastro, President.
T. W. Tomlinson, Secretary.

Our Competitor, Argentine.

Argentine is a country that has a population of about six inhabitants to the square mile. There are 1,127,547 square miles and about 7,000,000 people.

According to the last census (1908) the live stock consisted of 29,000,000 cattle, 7,500,000 horses, 460,000 mules and 71,100,000 sheep and goats. As these figures were sent to the Department of Commerce by United States Consul General R. M. Bartleman at Buenos Ayres, it is probable that there is not much change at this time. In view of the admission of foreign meats free of duty, Argentine has come into prominence as the nearest country having a small population and a surplus of meats.

The Color of Soils.

"The color of soils is governed largely by the amount and kind of iron compounds and the percentages of organic matter which they contain. Iron may give the soils a red, blue, yellow or gray color, depending largely upon texture, aeration and moisture content. Organic matter when present in quantities tends to make soils either black or brown in color. The combination of colors formed by the iron compounds and organic matter give rise to a great many intermediate tints.

"As a rule, the dark color of soils is closely associated with the presence of organic matter, while a light color indicates its absence. Dark-colored soils are usually quite productive, while light-colored ones are generally unproductive. Soils uneven in color and somewhat mottled indicate lack of aeration and drainage, and are not in good physical condition."—James D. Marshall, Colorado Agricultural College.

We Buy It By The Box
—for Christmas!
—for 85 cents!
The clean, pure, healthful
WRIGLEY'S SPEARMINT
can now be had of most any dealer for 85 cents a box of twenty packages. Get this long-lasting goody that helps digest other goodies. It costs less than a cent a stick by the box!
Be SURE it's Wrigley's
WRIGLEY'S SPEARMINT PEPSIN GUM
THE FLAVOR LASTS
W. Wrigley Jr. Co. CHICAGO
THE FLAVOR LASTS
CAUTION!
The great popularity of the clean, pure healthful Wrigley's SPEARMINT is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine WRIGLEY'S. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These imitations cost dealers one cent a package or even less and are sold to careless people for almost any price. If you want Wrigley's look before you buy. Get what you pay for.
We are inserting the above caution solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were Wrigley's

Measuring Hay.

"Measuring hay in the stack is a common method of selling hay, but the methods and rules used are very varied. Very little actual experimental data has been obtained upon the accuracy of the different methods.

The United States Department of Farm Management has made some experiments and uses the following method to find the cubic feet content of the stack:

"Measure the length of the stack, then the width, then with a tape measure over the stack from the ground on one side to the ground on the other side. (This distance is called the over), multiply the width by the over and this by .31 (thirty-one hundredths of one). This will give the area of the cross section. Multiply this by the length and get total cubic feet contents. The factor .31 is variable according to the height, width and fullness of the stack, and may be as low as .24 in low stacks or as much as .38 in high stacks.

The number of cubic feet to allow for one ton varies with the kind of hay and length of time it has stood in the stack, and is usually determined according to local custom."—S. B. Nuckols, Colorado Agricultural College.

First One Qualified.

"Did you ever really love any girl before you met me?" asked the beautiful one.

"No," replied the titled foreigner, "you're the first girl I have ever known who had money in her own right."—Judge.

CORN MARKET SITUATION.

Values Maintained by the Deficient Crop, Which All the Balance of the World Cannot Make Up.

There is some satisfaction to a farmer who has corn to sell that the admission of foreign corn free of duty will not reduce prices very much, for the reason that the surplus corn in South America is not sufficient to make up the difference between a full crop and short one in the United States.

For the satisfaction of our readers we will now give them a tabulated statement of the price of cash corn at St. Louis on the last day of each month of the year 1913, as follows:

Cash Corn—St. Louis.

1913.	Range of Prices Per Bushel.		
Jan. 31	49	to	49½
Feb. 28	49½	to	50½
March 31	54	to	54¼
April 30	57½	to	58
May 31	58¼		
June 30	62½	to	63
July 31	67½		
Aug. 31	74½	to	74¾
Sept. 30	72		
Oct. 31	74½		
Nov. 30	77		

These monthly comparsions show distinctly that the decrease of the crop was no calamity to those who were fortunate and raised an average crop. On page 6 of this edition will be found the total of the crop of the United States for six years. The largest crop was in 1912, when the crop was 3,124,746,000 bushels; the smallest in 1913, when it was 2,463,017,000 bushels, and the average was 2,703,558,000 bushels.

Turning from the cash trade to the speculative we look to Chicago for the transactions and contracts for future delivery. The December corn option advanced from 56⅝ cents a bushel on May 31st to 70¼ cents on November 30th. The May, 1914, option advanced from 65 cents on July 31st to 70 cents on November 30th. The option that matures May 31st, 1914, is the great indicator of possible prices in the future, and next in significance is the July, 1914, option, which was quoted on November 30th at 69⅜ cents a bushel. For easy reference we submit herewith a statement of the option quotations month by month since last May, as follows:

Corn Option, Chicago Basis.

1913.	Sept.	Dec.	May. 1914.
May 31	58¼	56⅝	....
June 30	62¾	59½	....
July 31	66	63	65
Aug. 30	72¾	68⅝	70½
Sept. 30	....	70¼	71¼
Oct. 31	....	70¼	71¼
Nov. 30	....	70¼	70

Here we leave the corn market. In every issue of this paper appears a clear-cut statement of the past, the present and the future of the grain trade. Any farmer who will keep the paper on file will find that this feature alone is worth the subscription price.

OATS MARKET SITUATION.

Very Little Chage in Prices During the Month of November and a Probable Bottom Reached.

The oats market appears to be independent of either corn or wheat; in fact, all the grains seem to be acting independently of one another. The oats crop of 1913 of 1,222,139,000 bushels was the largest on record with exception of the previous year. Naturally, no high prices could be expected this year.

As we are approaching the end of the year we submit herewith a month-to-month statement of cash oats prices at St. Louis, so far in the year 1913, as follows:

Jan. 31	34		
Feb. 28	33	to	33½
March 31	32¾	to	33
April 30	35		
May 31	37½	to	38½
June 30	40	to	41
July 31	39½	to	41¼
Aug. 31	41	to	41½
Sept. 30	42		
Oct. 31	40	to	40½
Nov. 30	40½		

The scene now shifts to Chicago, where the grand trading is done in the contracting market. The so-called speculative market has a wider field than formerly, because every market in the world is involved, now that oats can enter the United States free of duty. In number of bushels (but not in weight) the oats crop of the world is the largest of all grains, and it would not be surprising if large arrivals of foreign oats were eventually recorded. But let us not anticipate anything that the trade has not discounted. We present herewith a statement of prices quoted at Chicago on the last day of the month since May 31st, as follows:

Oats Option Quotations.

1913.	Sept.	Dec.	1914. May.
May 31	38⅝	39⅞	....
June 30	42⅜	43⅞	....
July 31	41	43⅛	45⅜
Aug. 30	41	43⅞	41
Sept. 30	41½	42⅝	42½
Oct. 31	....	38⅝	42½
Nov. 30	....	37⅜	41½

There in simple evidence stands the December option, quoted as high as 43⅞ cents on August 30th, and reduced to 37⅜ cents by November. There is the May, 1914, option that does not mature for six long months quoted at 45⅜ cents on July 31st, and reduced to 41½ cents, and there is a July quotation on record at 41⅛ cents. All who are interested in grain growing will find it to their advantage to keep a file of The National Farmer and Stock Grower for the sake of these monthly reviews and records.

The Use of Potash.

The use of potash to the paying quantity is not always to be found in what are supposed to be complete fertilizers, therefore the German Kali Works on page 2 offers to sell potash direct to farmers in lots of 200-pound bags up. A letter to the German Kali Works will secure valuable information on the subject of the correct amount of potash to be used in furnishing plant foods for different crops.

Pea and Bean Threshing.

Our readers who are interested in pea and bean growing are advised to write the J. L. Owens Company, Chamber of Commerce Building, Minneapolis, Minn., and ask for one one of their complete catalogues, which, in addition to a full description and illustration of their full line of threshers, also contains some valuable information as to the soil, feed and market value of these crops. They also will furnish you with actual facts and figures based upon actual experiences of growers in different parts of the country, and to what extent it is possible to accomplish in real profits from growing these crops with proper handling. Kindly mention this paper and address J. L. Owens Company, Chamber of Commerce Building, Minneapolis, Minn.

In the movement from farm to final market the loss of eggs that are stale or spoiled in any way amounts from first to last to 17 per cent. That is the United States Department of Agriculture estimate.

BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

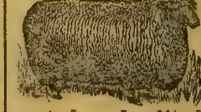
We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.

The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.



The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

CEMENT WORKERS' HAND BOOK.

Valuable Work That is Useful and Instructive on Any Farm.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

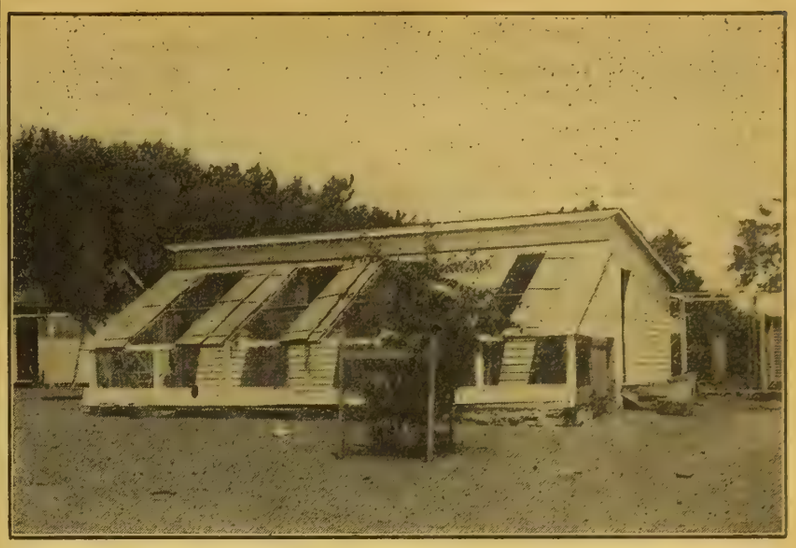
For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

SALE OF JACKS AND JENNETS

Also Poland-China Swine at Jackson, Mo., February 10th, 1914, at Public Auction.

Mr. W. F. Schade, of Jackson, Mo., who is to hold an auction sale on the 10th of the coming February, has been breeding and handling jacks and jennets for twenty-four years, and there are but few establishments that equal his. In building up his herd he has always used the best jacks that money could buy. Twice he paid the highest prices on record for one-year-old colts. At one of the Monsees sales he first bought King Boy by Orphan, 696; the second purchase by paying $1,300 for the great yearling jack colt De Wolf Hopper, 3,720; he also by Orphan; dam, the noted jennet Belle of Waverly, 1,484; she is the dam of the State Fair champion; and the bunch of jennets offered in the sale are bred to the aforementioned jacks. Anyone who is looking for a good herd jack or a first-class mule jack will do well to attend the sale, for all stock is fully guaranteed. His purpose in breeding is size with quality. The reputation of Mr. Schade as a man and a breeder is fully established. He was for several years jack and jennet judge at the Missouri State Fair.

We must not forget the Poland-China swine to be offered at auction the same day. Mr. Schade is noted for his fancy registered Poland-Chinas, and the list will consist of bred sows, gilts and young boars, all of them to be bought at your own price by fair-bidding competition. Jackson is in Cape Girardeau county, just above Cape Girardeau, on the Iron Mountain Route. The proper thing to do is to write for catalogue, which will be sent you and furnish an opportunity to classify the offerings before you attend the sale.



MISSOURI POULTRY RAISING. Hinged doors on roof of scratching pen attached to hen house on La Cima Farm, owned by F. J. Banister, Hickman Mills, Mo. The main house is 14 by 30 feet, and the scratching pen is 10 feet wide by 30 feet long, the top, front and ends being covered with wire netting. In pleasant weather the doors are opened to admit light and air, but in stormy weather they can quickly be closed, making an open-front house.

Poultry, Butter and Eggs.

On December 1st egg receipts at St. Louis were of large proportion, but all offering keeping well cleaned up at steady prices. Current receipts—Firsts, including new cases, at 32c., in good second-hand cases at 31¾c., and cases returned at 31¼c.

Butter.—Receipts moderate, but weather unfavorably warm and demand quiet, with only business of consequence in extras. Packing stock and low grades of creamery dull. Current make: Creamery—Extra, 32c.; firsts, 27c.; seconds, 25½c.; and ladle-packed, 24c. Packing stock at 18½c. All country butter should be packed in tubs or pails.

Cheese.—On orders, per pound: Northern—Twins, 15½c.; Singles, 16c.; Long Horns, 16c.; Daisies, 16c.; Young Americas, 16c.; Prints, 16½c.; new Limburger, 14c.; Swiss, 19c. for No. 1 new; Brick, 16c.; all inferior quality less.

Live Poultry.—Steady, with receipts light. There was a fair to good inquiry for choice dressing turkeys, light springers, fat hens and ducks, but weather too warm for much activity. Geese in largest offering, but many of these carried over from last week, and were mainly of an unattractive appearance. Chickens, 12c.; broilers, 13½c.; fowls, hens, 10c.; cocks, 8c. Turkeys, 16c.; culls, 10c. Geese, 10½c.; thin and poor less. Ducks, 12½c. Guinea chickens, old, per per dozen, $2.75; spring, 1½ pounds and over, $6.00; spring, light $3.00.

Dressed Iced Poultry.—Firm; receipts lighter and demand fair. Chickens, 13c.; broilers, 14½c.; fowls (hens), 11c.; cocks, 2c. Turkeys, 17c. Geese, 11½c. Ducks, 13½c.

Rabbits.—Weak and nominal; continued spring-like weather has demoralized the market, and not enough good rabbits arriving on which to base a quotation. Bulk of the receipts would not bring charges, and health inspector on street condemning large quantities. Some dealers rejected their entire receipts for the day.

Pigeons and Squabs.—Live pigeons at 90c. per dozen. Squabs—Fancy homers, seven to eight pounds to the dozen, at $2.75 per dozen; large homers, nine to ten pounds to the dozen, at $3.25 per dozen; small at $1.50; common live squabs and dead pigeons at 60c. per dozen.

Farm Loans and Credits.

The Hon. Secretary of Agriculture in an address before the National Grange referred to farm loans and credits, and in his address he said:

> "One thing is clear, the schems that are multiplying which conceive the farmer to be a mendicant and a subject for unique and special legislation may be at once condemned. The American farmer does not need or desire to be classed with those foreign people who are just emerging from a condition of serfdom and tutelage. He asks no opportunity that is not afforded to every American citizen; he asks for no legislation which sahll give him credit on easier terms than his brother mechanic or his professional friend or his merchant may secure it. But he does ask to be assisted in creating conditions and machinery which shall enable him on a similar credit foundation to secure his money at the same rates as any other class in the community. This, and this alone, it seems to me, is all that he asks and is nothing less than he deserves."

The Secretary of Agriculture is right, perfectly right; but the farmer needs special legislation to give him equal credit with other interests. The United States government is receiving money as a banker and loaning that money out again to bankers; but it is not being loaned to farmers, nor to anyone who can or will lend it to farmers at fair rates on land security. And in a hundred years from now, unless there is some special legislation, the government will be receiving deposits and doing a banking business of hundreds of millions of dollars, and farmers will never get a long-time loan of a dollar. We believe that legislation should provide for loaning the deposits of the Postal Saving Banks to farmers. At present it is loaned to national bankers, and they are not allowed to make long-time loans to farmers.

PRINCESS, R., 10th—HEREFORD COW. Owned by Luce & Moxley, Shelbyville, Ky. Picture taken at the time of the Kentucky State Fair in 1912, where she was grand champion for the breed.

SIX-YEARS' GRAIN CROPS.

The Yield For the Country and the Average Per Acre For the United States — Calculation of Value Per Acre.

For convenience of our readers we show the grain crops of the United States for six years, including the year 1913, and on the right of the total crop we give the average yield per acre for each year. Such information can be cut out and carried in the pocketbook. We also give farm value per acre for the crop of 1913.

Wheat.		Per
Year.	Bushels.	Acre.
1908	664,602,000	14
1909	683,350,000	15.4
1910	635,121,000	13.9
1911	621,328,000	12.5
1812	730,267,000	15.9
1913	753,223,000	15

Corn.		Per
Year.	Bushels.	Acre.

17 bu. buckwheat,	75.5c. per bu.	12.83
Average value per acre		12.48

REX McDONALD DEAD.

Champion Saddle Stallion—By Many Good Judges and Enthusiasts Said to be the Greatest Saddle Stallion Ever Shown.

Rex McDonald died in November at the home of his owner, B. R. Middleton, of Mexico, Mo. Rex McDonald was recorded in the American Saddle Horse Breeders' Register, No. 833, as black stallion, 16 hands, bred by Joseph McDonald, Mexico, Mo., foaled 1890. Sire, Rex Denmark, 840, by Crigler's Denmark, by Washington Denmark, 64, by Gaines' Denmark, 61, by Denmark F. S.; dam, Lucy Mack, 2,459, by Black Squirrel, 581; second dam, Star, by Old Star Davis; third dam, Mollie, by Sam Martin's Farmer. His descent is traced back to Denmark F. S., the foundation sire of the American saddle horse, and through him to the English thoroughbreds Herod and Eclipse.

Rex McDonald appeared at St. Louis in the year 1894, owned by Col. Jno. T. Hughes, in competition with the famous chestnut mare Lou Chief, bred by J. M. Garrett, Fort Garrett, Ky., and foaled in 1887. The decision placing Rex McDonald champion was rendered by D. R. S. Carr, John R. Gentry and Joseph Maxwell, and was sharply criticised at the time, but has been vindicated a thousand times since. The greatest contest Rex McDonald ever had was in 1895, when his chief competitor was the mahogany bay, Kentucky-bred Thornton Star, and it was only by a hair, for the reason that Thornton Star was almost irresistible. Afterwards Rex McDonald was not approached by a dangerous rival and lived to be barred from all competitions.

The rest of the article on Rex McDonald we take from the Spirit of the West, published at Des Moines, Iowa, as follows:

"Rex McDonald has long since been known as the king of saddle stallions, and his great show-ring career was ended by him being barred from all the important shows and not by his age. As a sire, grandsire and great-grandsire he was without equal. He was held in high esteem by the best saddle horse breeders of the country. He was twenty-three years old at the time of his death, and despite this advanced age he retained the same fine lines and ease of activity he bore when he won his original title in Madison Square Garden, years ago.

"Rex McDonald was a large black horse of powerful and beautiful build, with the intelligence of a human being. And the most remarkable thing about this grand old champion was the way he kept his conformation. When we last saw him, which was only last August, when he headed the grand $1,500 saddle stake at the Mexico Fair, accompanied by a brass band, except for a circle of gray around his eyes, one would never suspect the one-time champion of champions was an old horse, as age goes in the equine world.

"Rex McDonald was foaled near Mexico Mo., and the late Joe McDonald, who bred him, we are told, did not profit by breeding the champion, but, nevertheless, knew that he had accomplished what he set out to do, some years prior when he laid the foundation for this great horse by breeding his dam. When Rex McDonald was a yearling his breeder, on account of ill health and old age, sold the colt to R. T. Freman for $105, who later sold him to Col. John T. Hughes, of Kentucky, for $3,000, which, we presume, was a record price for a saddle stallion at that time, and late in the fall of 1898, while being shown at the St. Louis Show, was sold to Col. Bleese, of Macon, Mo., for another record price of $5,000. Col. Bleese afterwards sold him for $6,500 to a St. Louis party, who reported that he refused $10,000 for the son of Rex Denmark and Lucy Mack. It was about 1905 that a stock company at Columbia, Mo., purchased Rex McDonald and he was then retired from the show rings, and for ten years prior to this time he had been the undefeated champion saddle stallion of America.

"About four years ago, B. R. Middleton, the well-known horseman and stockman, but more generally known as the owner of Rex McDonald, purchased him from the Columbia Company and was again transferred to Mexico. He has done more than any other one thing to advertise the town and especially among horsemen, and the town's pride in him was touching. His appearance at their recent County Fair precipitated the wildest enthusiasm, and no Presidential candidate ever met with a warmer reception than did old Rex when he appeared before the grand stand when leading the contestants into the show ring, as referred to above.

"While the loss of Rex McDonald is a great one to the saddle horse interests of the country in general, there is the consolation that he has left many good sons to take his place."

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

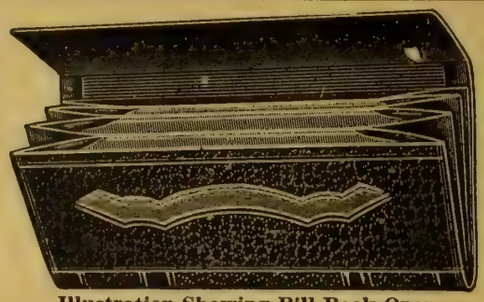

Illustration Showing Bill Book Open.

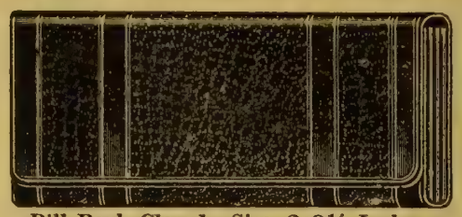

Bill Book Closed—Size, 3x8½ Inches.

Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

BEST VALUE AND MOST SERVICEABLE PREMIUM EVER OFFERED.

Every Prospective Subscriber Wants One and Needs One.

National Farmer Folding Pocket Bill Book, Genuine Seal Grain Leather Cover, Very Fine Finish, Fancy Embossed, Good Quality Throughout.

Our Subscription Offer.

WE have adopted THE NATIONAL FARMER FOLDING BILL BOOK as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one.NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Meat-packing Industry.

In 1909 the total number of establishments in the slaughtering and meat-packing industry as a whole was 1,641; the number of persons engaged in the industry, 108,716, of whom 89,728 were wage earners; the capital invested was $383,249,170; the cost of materials, $1,202,827,784; and the value of products, $1,370,568,101. The sum of $71,698,677 was paid out in salaries and wages.—United States Census for 1910.

Explained.

Tom McNeal tells this one in his bouquet of Kansas Sunflowers: A Kansas man happened to be present at a meeting in an Eastern State, where the speaker was arguing against prohibition. "I have a letter here," said the speaker, "from a man who lived a long time in Kansas. He is a member of the church and he says he can prove that under prohibition there is more liquor drank than where they have no prohibition laws. If there is some man here from Kansas, I would like to have him explain this." The man from Kansas rose to his feet. "If the speaker will permit, I will explain. The church member who wrote that letter is a liar. That is all!"—Kansas City Journal.

OUR OUTPUT FROM THE SOIL.

Limit Not Reached by Any Means and Only Just Begun—Less Than Twelve Per Cent. of Farm Lands Producing Maximum Results.

In his address on "The Organization of American Agriculture," delivered by Hon. David F. Houston, Secretary of Agriculture, before the forty-seventh session of the National Grange of Patrons of Husbandry at Manchester, N. H., on Friday, November 14th, he referred to the subject of the present output from the soil as follows:

"A question frequently asked in Washington of those connected with agriculture is whether we have reached the limit of our supply of the necessaries of life and whether or not anything can be done to decrease the cost of living. I have systematically refused to deal off-hand with this vastly important problem, as so many of the interviewers expect. It is one of vast importance and complexity. There are many avenues of approach to it; many controlling factors and no simple remedy. But I am not one of the pessimists. I do not entertain the thought for a second that we have approximated the limit of our output from the soil. As a matter of fact, we have just begun to attack the problem. We have not even reached the end of the pioneering stage and have only in a very few localities developed conditions where maximum returns may be secured. But we have unmistakably reached the period where we must think and plan and work. We can no longer rely on the bounty of nature. There are evidences that Providence is ceasing its protective supervision of fools and Americans. Conditions are emerging which, if not fundamentally dealt with, will lead us into serious embarrassments. It is well for us to face the facts and get our bearings.

"With a population of less than ninety-five millions of people living on more than three millions of square miles, it is ridiculous to speak as if our territory had been more than pioneered. The production per square mile in the Union does not exceed thirty-one, and ranges from seven-tenths of one per cent. in Nevada to five hundred and eight in Rhode Island.

According to the best statistics available, it appears that the total arable land in the Union is approximately 935,000,000 acres; that only about 400,000,000 of this is included in farms and improved; that over 100,000,000 is unimproved and not included in farms; and the remainder is unimproved lands included in farms. According to the best guesses I can secure it appears that less than forty per cent. of the land is reasonably well cultivated, and less than twelve per cent. of it is yielding maximum returns.

"That we have practically reached the stage where we have ceased to be an exporting nation of food products and are becoming dependent on foreign nations for the necessaries of life is a sad commentary upon our use of the opportunities bountifully bestowed upon us. We had better frankly face the fact that we are relatively inefficient, take stock of the shortcomings and earnestly seek the remedy."

Another Argentine Packer.

From Kansas City, on November 13th, it was reported that Charles H. Hill, Jr., who for the last two years has been a cattle buyer for Sulzberger & Sons, packers at the Kansas City Stock Yards, was leaving for Buenos Ayres, South America, where he will buy cattle for the same firm. He was accompanied by Charles Campbell and A. E. Peterson, of Chicago. They sailed from New York.

Charles H. Hill, Sr., head buyer for the Sulzberger & Sons Company, said his company had recently leased a packing plant at Buenos Ayres, capacity 3,000 cattle weekly, and would begin the slaughter of cattle about the first of the year. They will ship the output of the plant to Continental Europe, England and the United States.

Armour & Co., and Swift & Co. have packing plants in Argentine, the latter company having started in business there in 1912, when Charles Coffman, head buyer for them in Kansas City, organized the buying force and was absent from Kansas City more than four months.

The Brazil Land, Packing, Cattle and Lumber Company, of San Paulo, Brazil, is building packing houses, railroads and raising cattle. This company has millions of acres of grazing land in the high plateau country. The capital invested there is French and English, but its operating department is headed by Murdo McKenzie, formerly of Trinidad, Colo., when he was manager of the Matador Cattle Company.

The cattleman who wishes to make the most money off the least feed and in the quickest time will produce the butter ball known generally as baby beef. Light weights are in fashion, but meaning perfection in feeding and quality in breeding.

REX McDONALD, 833—The World's Champion Saddle Stallion. Campaigned over ten years, challenging all comers, without defeat. A horse more widely known and beloved of saddle-horse admirers than any other that ever lived. He was the sire and grandsire and great-grandsire of champions. The grandest saddle stallion the world has known. Owned and ridden by B. R. Middleton, Mexico, Mo., and died in November, 1913.

I'll Stop Your Losses
From Worms - I'll Prove it or No Pay

If you will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough Sal-Vet to last all your stock 60 days, without asking a single penny of pay in advance. All I ask is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—make you more money.

The Great WORM Destroyer

TRADE MARK
SAL-VET
REG. U.S. PAT. OFF.

The Great LIVE STOCK Conditioner

is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and greatly lessens the danger from hog cholera and many other diseases.

I'll Feed Your Stock 60 Days Before You Pay

Send no money—just tear off the coupon below, mark down the number of hogs, sheep, horses and cattle and mules you own, give your name and address and shipping station and I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. If it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny.

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO., Dept. NFSG Cleveland, O.

PRICES 40 lbs. $2.25; 100 lbs. $5.00, 200 lbs. $9.00; 300 lbs. $13.00; 500 lbs. $21.12. Special discount for large quantities. No order filled for less than 40 lbs. on 60 day offer. Never sold in bulk; only in Trade-Marked "Sal-Vet" Packages. 60 day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle.

PROOF

"'Sal-Vet' is a great remedy for sheep. It saved me ten times what I paid for it."—W. J. Neff, Millboro, Va.

"Have found 'Sal-Vet' O. K. for horses and colts; it is the best conditioner and worm destroyer I have ever fed."—John Bowles, Rt. No. 3, Holdrege, Neb.

"I have used 'Sal-Vet' for about two years, within which time I have not lost a hog. I consider it a sure preventive for cholera."—F. R. Dalrymple, Carthage, Ind.

"Since feeding 'Sal-Vet' my stock have done better than they ever have before. I have had to give less feed, and my stock looks sleek and fine."—A. Ayers, Cedar Springs, Mich.

THE NATIONAL FARMER and Stock Grower of AMERICA.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.,
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.
Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar. Canada and foreign subscriptions 75 cents a year.

During the month of November, 1913, the St. Louis market received 220,600 pounds of wool, which is twice the amount recorded last year.

The Fern Premiums which are advertised in this edition as a subscription premium will not be advertised again this season. Next October we will begin to advertise them again.

THE FASHIONABLE CATTLE.

Young Beef Well Fattened and Weighing Less Than Twelve Hundred Pounds Will Usually Top the Market.

In most every line of business the times are getting harder and harder, but there is one great exception where requirements leading to success are getting easier. In the great cities competition in business is excessive in some lines, and in others there is no competition at all. In some lines the combinations control the output, and it is fruitless to establish business in opposition. In the farm-paper business, as an example, it is more difficult to get fifty cents a year for a weekly paper than it used to be to get two dollars. Publishers used to sell advertising at prices several times higher than the same service will command now.

We are not expecting to get any thanks or endorsement when we say that the production of high-priced cattle is easier now than it used to be. Nevertheless, what we say is proven daily, and all cattlemen in touch with the market will admit it.

Twenty years ago the heaviest cattle, quality being equal, brought the most money per pound. Colonel Gillett, of Illinois, the premier cattle feeder of his day, used to market Christmas beef by the car-load weighing 2,000 pounds average, and eight cents a pound for them was the usual price. To-day, if Colonel Gillett were living, he would produce fat young steers not over a thousand pounds in weight and he would be selling them at the top of the market, and yet in his lifetime such cattle would and did sell three cents a pound less than the heavy cattle of equal quality.

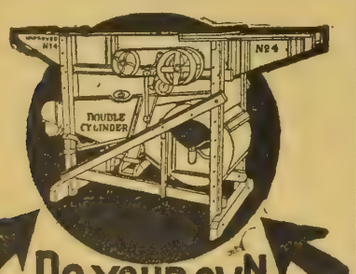
Notwithstanding his love for heavy cattle Colonel Gillett was the first to demonstrate that producing heavy cattle was a mistake. In his later life he was an advocate of producing lighter and younger cattle, but he did not live to see "baby beef," meaning yearlings, well bred and strictly fat, outsell heavy cattle, pound for pound, as we see before us every day.

The most remarkable thing in recent years is the position which fat, light-weight cattle hold on the market. Steers that ten years ago would sell three cents a pound below the high top of the market are now outselling top cattle of heavy weights by a half cent a pound. There is reason it it. People are paying high prices for meats and they buy light cuts. The butcher cannot sell the great prize steaks of former days, and they wish to have no gross meats or excessive fats left over. In other words, the trade has set the fashion in light, handy, fat cattle, and the stockman finds it to his advantage to produce and sell the fashionable kind.

Professor Henry, in his book, "Feeds and Feeding," gives many examples of the increased cost of gain in weight as cattle grow older, but we will only take one example to show our point. He said: "At the Fat Stock Show for 1882 the feed for 100 pounds of gain up to 12 months cost $4.03; and between 24 and 36 months the cost reached $12.54." No matter if it does cost more money to raise a yearling steer than formerly, the change in market conditions has amply compensated for the additional cost. Our idea is that production of heavy weights is the best way to reduce prices, and that the continual production of light-weight but fat cattle is a sure way to maintain prices for the benefit of stockmen.

The great significance of the changed condition is in the fact that it offers the entire country a premium on beef raising. So long as heavy cattle topped the market the production of top-priced beef was limited to the states where corn was abundant and cheap. To-day there is not a state in the Union where it is really difficult to produce what are now classed as top cattle. The beef type must be there, called Quality; that is in reach of anyone who will keep pure-bred bulls of the beef breeds. Raising the calf and then fattening until it weighs a thousand pounds is a simple matter in any state where corn and cotton-seed meal are available, and that means the entire South, where top cattle can be raised by anyone who has the enterprise and the ability to do it.

We think this simple statement of fact ought to be accepted as a good omen to beef raisers, whose task in raising beef cattle has been made lighter by the change in fashion.



DO YOUR OWN THRESHING

of beans and peas with a guaranteed Owens Thresher. All your seed separated and cleaned from the vines and pods without splitting. Pea and bean growing is the most profitable farming if handled right.

OWENS DOUBLE CYLINDER
Bean and Pea Thresher
—Made in 4 sizes—

Will pay for itself many times over in one season. Guaranteed not to split the seed and take all from the vines.

The Grand Champion Steer.

The grade Aberdeen-Angus steer Glencarnock Victor, II., calved September 26th, 1911, exhibited by Mr. James D. McGregor, of Brandon, British Columbia, is grand champion of the Chicago International Live Stock Exposition of 1913.

The Congress of the United States discouraged sheep raising by the only means in its power. The money sent to other countries for mutton will not pay any taxes to Uncle Sam, neither will it fatten any American industries.

Canada has won the grand championship steer award two years in succession at Chicago International.

$1025 DETROITER

Address.....

FARM AND RANCH LANDS.

ALABAMA.—Fertile prairie land near railroad town. Good for all kinds of farming and finest of stock countries. Buy from owner and save commission. State number acres wanted. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Look on page 18 for the advertisement of the lands on the Cotton Belt Route. The land of peanuts and pork. Simple agriculture that pays the way and earns the money with which to purchase and build comfortable homes. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for the Arkansas Booklet.

ARKANSAS LAND FREE.—500,000 acres government land now open to settlement. Guide Book with lists, laws, etc., 25c. Township map of state 25c. additional. **L. E. Moore,** Little Rock, Ark.

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

NEW YORK.—150 acres level, rich loam; good buildings; adjoins village. $9,750, including stock, crops, tools. Only $1,500 down. Catalogue free. **Geneva Farms Co.,** Geneva, N. Y.

OKLAHOMA.—Fertile Prairie Farms close to Muskogee, Oklahoma, a city of twenty-five thousand people; suitable for all kinds of grain, as well as an ideal stock country. Also Truck Farms adjoining the city limits at terms to suit. CRABTREE INVESTMENT COMPANY, 615 Barnes Building, Muskogee, Oklahoma.

TEXAS.—Northwest Texas, the shallow-water country, that can easily be irrigated. See the story on page 5 and send to C. L. Seagraves, 2516 Railway Exchange, Chicago, Ill., and ask for the "Northwest Texas" Folder.

TEXAS.—Lands on the Cotton Belt Route in Texas are highly productive, in law-abiding communities, made rich by fruit and vegetable farming and stock raising. Good lands yet to be had cheap, but not for long, for prices are advancing. Write to **E. W. LaBeaume,** G. P. A., 1709 Pierce Building, St. Louis, Mo., and ask for Texas Booklet of Low-rate Excursions.

TEXAS.—320 acres, Wharton county, Texas. All tillable. Black and dark sandy loam soil; about two-thirds prairie and one-third timber (live oak); well drained and free from crawfish holes or alkali spots. Running creek water. Good drainage and a rainfall of 42 inches. This is fine cotton, fruit and general farming land, and crop failures are unknown. Situated twelve miles east of Victoria. This is a real bargain at $30 per acre. Terms: One-third cash and balance to suit at 8 per cent. interest. **H. M. Thompson,** Owner, P. O. Box 66, San Antonio, Texas.

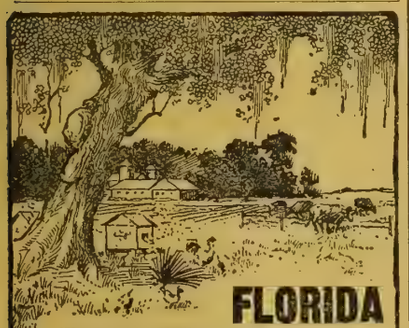
VIRGINIA.—CATTLE CAN GRAZE IN VIRGINIA almost every day in the year. Little snow; abundant rainfall. Ideal climate for dairying, stock, fruit or general farming. Good farm lands $5 an acre up. Write for information. **F. H. LaBaume,** Agl. Agt., Norfolk & Western Ry., Room 257, N. & W. Bldg., Roanoke, Va.

WANTED to hear from owner who has good farm for sale. Send description and price. **NORTHWESTERN BUSINESS AGENCY, Minneapolis, Minn.**

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Bldg., Chicago.**

FLORIDA EAST COAST.



FLORIDA

The Land of All-the-Year Out Door Life—

Write and tell us what you would like to do if you come to Florida. Fruit growing, trucking, poultry, bee-keeping, stock raising, dairying a winter home or business or professional openings, as well as some lines of manufacturing, and we try to assist you to get the right location. Your success means our success and the success of the community in which you live. Illustrated booklets and "Facts About Florida" sent free on application.

Room 101 City Bldg., St. Augustine, Fla.

THE MATTER OF FENCING.

The First Movement Towards the Improvement of Waste Lands and the Best General Improvement on a Farm.

Anyone who has had experience in raising live stock on the open range, the stock running on the commons, so to speak, will testify that at some time or another it results disastrously, and those who after raising live stock on the open range have handled stock in pasturage will be willing to take all the affidavits necessary to the effect that in the end an acre fenced is worth three that are unfenced.

Some ranch owners now living remember the changes that took place when the great Western country was open for the grazing of the new-comer, who would take his chances with possibility of raids by Indians; how at first the grasses were luxuriant until year after year the ranges became overstocked until the familiar estimate in the good grass country was ten acres to the steer. Now that this same country is fenced up and controlled by the owners the carrying capacity is easily four times greater.

But the possibilities of fencing do not end with simple enclosure. Subdivision of fencing has great advantages. In the Southen States, subdivision of pastures will surely enable the owner to clean his farm of cattle ticks. Then, again, by keeping stock in one pasture while grass is growing in another, the spring crop of grass obtains a stand that is impossible to secure while the hungry cattle are biting every blade of grass that tries to get a start. No matter what provision may be necessary to sustain the stock while grass is getting its first growth, that unchecked growth of grass is worth all that it costs. A stockman who had fenced pastures, and afterwards divided up into three, stated to the writer that by that simple act he added one-fourth more forage to his farm production. We do not pretend to go into particulars of facts that are of common knowledge, but we wish to say that in view of present conditions and the necessity of bringing every inch of land into usefulness and availability it is remarkable that so many farmers continue to have unfenced lands that are not producing a tenth of what can be secured from the same land fenced and improved.

We are gradually approaching the time when every little common dogie heifer will sell for more than it is worth and several times more than it will cost. Stockmen will have to scour the earth for females in order to produce more cattle. If finely-bred cattle are so high as to be out of sight, they will have to buy commoner cattle and make the best of them.

We do not advocate the raising of common cattle, but really the great advance in the price of stock cattle has lifted the common cattle from an unprofitable to a profitable basis, and the place to start the improvement of cattle is inside the fence, and not outside of it. Fencing is done mainly with wire. The price of wire has not advanced. The first extensive barbed-wire fencing was done at nine cents a pound. Ranch cattle inside the fences were then worth $10 to $15 a head. Since then cattle have gone up and fencing has gone down. We will be glad to hear from our readers who have experiences in the change from open range to fenced pastures.

GOOD BOOKS AND PAPERS.

HOLSTEIN-FRIESIAN HERD BOOK, Vol. XXI., containing a record of all Holstein-Friesian cattle approved and admitted for registry since Volume XX, consisting of bulls 95,236 to 111,599; cows, 178,946 to 205,896, and to May, 1913. It is published by the Holstein-Friesian Association of America, Frederick L. Houghton, Secretary, Brattleboro, Vermont. This volume shows by list of members, list of animals of owners, rules, regulations, proceedings of meetings, the grand strength of the Holstein cattle in America.

THE CORN CROPS.—This is one of the rural text books edited by Prof. L. H. Bailey, the recognized head of agricultural and horticultural instruction in the United States. The book is worked out by Prof. S. G. Montgomery, Professor of Farm Crops in New York State College of Agriculture. The publisher is The Macmillan Company, 66 Fifth avenue, New York, and the price is $1.60. It covers maize, Kaffirs and sorghums as grown in the United States. There are 350 pages, fully and interestingly illustrated and copiously indexed. The book is a wonder in comprehensive compilation, meeting the investigator half way and clearing his road as he reads. There are other corn books and other farm books, but no farm library is complete without this book entitled **"THE CORN CROPS."**

SOILS AND CROPS.—A new work that is a high school book for the purpose of teaching the principles and practices of agriculture. It is intended for use in agricultural, normal and other schools, and there is no school where it is of more value than the farm. To have evening studies for an hour or so with this book in hand would interest everybody on a farm, because it is simply written and amply illustrated. The book is by Thomas F. Hunt and Charles W. Burkett, and there are 550 pages. The price is $1.50 per copy, and it is published by Orange Judd Company, 315 Fourth avenue, New York City, N. Y.

BICKMORE'S FARM ACCOUNT BOOK.—For several years the Bickmore Gall Cure Company have made it a business to give away a Farm Account Book. Of course, it is for the purpose of reminding farmers of the Bickmore Gall Cure, but it does not detract from the value of the book or from the enterprising spirit of the giver. In addition to being an account book specially prepared for farmers' use it is also a book of information, containing tabulations that are useful in all kinds of emergencies. We advise our readers to write the Bickmore Gall Cure Company, Box 486, Old Town, Maine, and ask for a copy of the Farmers' Account Book.

THE MODERN GAS TRACTOR.—This book is published by Norman W. Henley Publishing Co., 132 Nassau street, New York, N. Y. The price is $3.00 per copy. It is a complete treatise, describing all types and sizes of gasoline, kerosene and oil tractors; considers designs and construction exhaustively; gives complete instruction for care, operation and repair; outlines all practical applications on the road and in the field. The best and latest work on farm tractors and tractor power plants. 480 pages; three folding plates; 264 illustrations.

Stop Losses From Worms.

Many years ago Dr. Detmers, a veterinary surgeon, was sent out by the United States Bureau of Animal Industry to investigate the diseases of live stock on the great ranches of the West, and more particularly the Southern cattle fever, which up to that time was not known to be caused by ticks. But in Northern Texas he became very busy examining sick hogs and sheep. The writer of this article went with him and many post-mortem examinations were made. The answer was worms, worms, worms. He then stated that eighty per cent. of all live stock diseases were caused by worms. Since then we have great respect for the worm destroyers in any shape or form they may be advertised, especially so when the remedy and the guarantee go together, as in the case of the S. R. Feil Company, advertising on page 7. The advertisement is worth reading.

St. Louis Wool Market.

On December 1st, the day for the admission of foreign wools free of duty, the trade was quoted as follows: Near-by growth at from 16c. for low to 19c. for choice; fine at from 11c. for heavy to 14½c. for light; lambs at 15 to 16c.; burry at from 9c. for hard to 15c. for slight; Southwestern at from 8 to 10c. for hard burry up to 16 to 17c. for clear; medium loose at from 15 to 16c.; fine at from 2 to 10c. for heavy sandy to 13 to 15c. for light; Northern and Western at from 15 to 16½c. for dark to 18c. for bright medium; fine at from 10c. for burry to 15c. for light; burry at from 9c. for heavy to 15c. for slight; tub-washed at from 15 to 20c. for burry to 28c. for No. 1; Angora goat at from 10 to 16c. for burry to 25c. for long lustrous.

Profitable Dairying

Short, mild winters, moderate summers, abundant rainfall, well distributed throughout the year—average 4 inches monthly in 1913—good, rich grass; cheap lands—**VIRGINIA** offers every advantage for dairying and stock-raising. Why work hard for a bare living when the same effort would make you rich here in a few years?

Good, well-watered farm lands, on railroad, can be bought today for as low as

$15 an acre on easy terms

but prices are advancing rapidly. Write at once for list, maps and authentic information, also latest copy of our illustrated magazine.

Alfalfa and all other crops grow well in this superb climate.

LOCAL REPRESENTATIVE WANTED. No canvassing or soliciting required. Good income assured. Address National Co-Operative Realty Co., R-90 Marden Building, Washington, D. C.

Everybody Buying STEEL Shingles!

All over the country men are tearing off **wood, prepared paper, tin** and **galvanized** roofs. Nailing on "Tightcote" **S-T-E-E-L**. For only "Tightcote" STEEL can be **rot-proof, fire-proof** and **rust-proof**. It had to come, for this is the **Age of Steel.**

Cheaper, Too!

Curiously enough, **Steel** shingles, as we sell them, direct from factory to user, are now **cheaper than wood.**

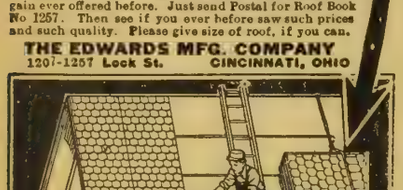
And easier put on. Instead of nailing one at a time, these shingles go on in big clusters—100 or more at once. No extras needed. No special tools. No expert workmen. No painting required. Yet **practically no wear-out** to an Edwards Steel Roof.

How Rust Was Done Away With

Ordinary metal roofing rusts. This doesn't. For we invented a method which, applied to Open Hearth Steel, absolutely prevents rust from getting started. Called **The "Edwards Tightcote Process."** It does the work like magic, as 125,000 users are glad to testify.

Edwards' Offer We not only sell direct, but **pay the freight.** No such roofing bargain ever offered before. Just send Postal for Roof Book No 1257. Then see if you ever before saw such prices and such quality. Please give size of roof, if you can.

THE EDWARDS MFG. COMPANY
1207-1257 Lock St. CINCINNATI, OHIO



Honors to Governor Hoard.

To have his friends charter a special train to carry him from his home in Fort Atkinson to Chicago, that they might express their appreciation of his services to one of the greatest of America's industries and that he might see the exhibits of dairy cattle and dairy machinery assembled at the Eighth National Dairy Show, was the experience of former Governor W. H. Hoard, who has done as much or more than anyone to advance dairying in this country.

Until ill-health prevented, Governor Hoard made it an invariable rule to attend not only this annual dairy cattle congress, but practically every important convention or meeting of dairymen held everywhere in the United States. While at the Dairy Show Governor Hoard was made the guest of honor at a banquet attended by a number of America's leading dairymen and dairy specialists.

A Milker Yet to Come.

"A demonstration was recently given in Sydney, New South Wales, Australia, of a new machine said to be capable of milking 100 cows in two hours. The machine is known as the A. R. W., and it is already being used in New Zealand. Two recommendations in favor of the A. R. W. are, that it is easily handled and controlled and works smoothly without in any way irritating the cows. The teat cup is designed in such a way as to permit free circulation of air, and there is always freedom for suction around the teat. The milk is conveyed from to cow to separator by automatic adjustment." — The Dairyman.

Advanced Register Guernseys.

A great deal of interest has been attached to the work of the Advanced Register Guernseys. Recently, at the sale at Edgewater Farms, Canandaigua, N. Y., of fifty-two head, was the first time when a public appreciation of such animals was measured. The mature animals were nearly all proven Advanced Register animals and a large portion of the young stock of Advanced Register parentage. The sale was the most successful public sale of the breed ever held. Fifty-two head sold for $25,215, an average of $484.90, surpassing any prior sale. Miranda of Edgewater, with a record of 14,617.00 pounds milk and 730.49 pounds fat, and a daughter of the famous Miranda of Mapleton, the greatest long-distance cow of any breed, was sold for $2,500, while two of her brothers sold for $800 and $500, respectively.

Accounts For Loss of Cream.

According to the press report of the Wisconsin Agricultural College, butter-fat and profit may be lost by being run into the skim-milk can if the separator is not properly adjusted. One Wisconsin creameryman has found by repeated tests that skimmed milk obtained upon farms where hand separators are used oftentimes contains large percentages of butter-fat, amounting in some instances to one-fifth of that produced by the farmers' cows.

Frank Swoboda, Agricultural Representative of the United States Department of Agriculture and the College of Agriculture of the University of Wisconsin for Langlade county, has found that many farmers in his section are losing money by running cream into the skimmed milk. His tests, made co-operatively with local creamerymen, showed losses which warranted him to carrying on a campaign for the more efficient use of farm separators.

C. E. Lee, of the University Dairy School, has assigned six causes for the loss of fat in milk. First, the separator may not be standing level upon a firm foundation; second, the bowl may be out of balance and vibrating too much when in operation; third, the bowl may not be operated at full speed (if the speed of the handle should be at 48 or 60, as is indicated by the book of instructions, it must be maintained at that rate during the separating, and if other than hand power is used the speed of the bowl must be the same); fourth, skimming milk that is too cold (milk should be separated immediately after each milking); fifth, the cream outlet may be partially stopped, due to improper cleaning of the separator; sixth, the bowl may be too low or too high. If too low, it is due to the parts being partially worn, or in removing the bottom parts for cleaning and not readjusting the height of the bowl to its original position.

The National Butter Exhibit.

According to the New York Produce Review and American Creamery there were 551 tubs of butter in competition at the National Creamery Buttermakers' Association at the National Dairy Show, and the prize winners were as follows:

O. N. Peterson, Rapidan, Minn.—Gold medal, highest in whole-milk class.

Alfred Camp, Owatonna, Minn.—Silver medal, second in whole-milk class.

W. H. Anderson, Algona, Iowa.—Gold medal, highest in gathered-cream class.

R. F. Colwell, River Falls, Wis.—Silver medal, second in gathered-cream class.

F. R. Palmer, Union, Ill.; Geo. T. Vetter, Eau Claire, Mich.; E. A. Paulson, Webster, S. D.; Ed. Huebschman, Lamar, Ind.—State cups, highest in each state having ten or more entries, but excluding winners of medals.

The State Banner was won by Minnesota, for highest average score.

The butter was auctioned by Frank Brown. Very few buyers were present and only two made bids. Howard Reynolds, of James Rowland & Co., New York, started the bidding at 29 cents and secured the entire lot of about 550 tubs at 30 cents f.o.b. Chicago. Later, Geo. W. Linn & Son, of Chicago, offered to take the lot at 30½ cents if the difference could go to the association, and Mr. Reynolds, upon learning of this offer, agreed to cancel the sale so that the association might get the highest obtainable price.

NOW, THESE PRICES IN EFFECT!

Argentine and Siberian Butter.

In a Chicago market letter to the New York Produce Review and American Creamery, November 5th, the following was said:

"Samples of Argentine and Siberian butter were received on this market early last week. The butter from the South American republic impressed the trade very favorably as to its quality, but that from Siberia did not meet with as much favor as that from south of the equator. Bowman & Bull were responsible for the forwarding of the samples. Mr. Bull became greatly impressed with this butter while on a recent trip to New York. Mr. Bull said that they have contracted for a shipment of 1,400 boxes each, containing approximately 56 pounds, for shipment in December. This butter will arrive about the first or second week in January. He said: 'This butter from Argentine is good butter, but does not compare with our extras. This butter, I believe, will grade firsts.'"

The Efficiency of the Dairy Cow.

"The dairy cow can often be brought up to a high degree of efficiency by some very simple means. The persistency of the milker will pay well for all the extra time spent. Try to make the cow think she has not given enough and she will set about to make it up next time. A little milk left in the udder will make her think she is giving more than she is expected to, and at the next milking she will not have quite so much for you. There is a great difference in the per cent. of butter-fat in the first and the last milk drawn. The first will sometimes be as low as one per cent. and the last has been known to run as high as twelve per cent. It pays to work for the strippings. The manipulation of the udder will often result in the increase of a pound of milk. This is usually done, after the milker has secured all the milk he can, by taking the teat in the hand and pushing the udder up close against the body, repeating this about three times with each quarter. Then take each quarter, in turn, between the hands with the hands close to the body and rub down. The extra milk secured at a single milking may not pay for the time, but it will stimulate the cow to give that much more at the next milking without extra work. Here is where the profit will come in. We all know that a cow with which the calf is allowed to run will very soon adjust the flow of milk to the needs of the calf, and it is equally true that the dairy cow can and will increase the milk flow if encouraged by the milker. Get all the strippings. It will pay."—E. P. Clement, County Agriculturist, Prowers county, Colorado.

Like Old-time Hogs.

On November 19th, at the St. Louis National Stock Yards, John Fitzgibbons, a leading farmer and stockman of Saline county, Missouri, had in three loads of choice, heavy hogs, one of which weighed 313 pounds, and sold at $8.05 per 100 pounds; one that weighed 296 pounds, and brought $8.02½ per 100 pounds; and one that averaged 287 pounds, and sold at $8.00 per 100 pounds. This was an extra good string of heavy hogs, and they attracted considerable attention on a market where all the hogs do not average over 180 pounds.

Record Price For Shorthorn.

At Buenos Ayres, Argentine Republic, South America, the Shorthorn bull Americus, grand champion of the breed at the Palermo National Show, was sold at auction for a price equivalent in our money to $35,200. Another bull sold for $29,800, and a total of seventy-seven head were disposed of for $262,500, an average of $3.409 American coin. The wealthy ranchmen of Argentine have always been noted for enthusiasm in buying pure-bred bulls of the beef breeds.

POCKET BOOK FREE.

CARE OF MILK AND CREAM.

From the Agricultural College, New Mexico—Views For Beginners—Good Reading For Everybody.

The following article is from Prof. W. S. Cunningham, of the Agricultural College, New Mexico. It is intended for beginners, but will refresh all who read it if they are milking cows:

"Nearly all changes which occur in milk or its products are due to the action of bacteria. Bacteria are very small, microscopic, single-celled plants, which are found almost everywhere in nature. They are most abundant where there is dust and filth, and, if subjected to favorable condition, as warmth, food and moisture, multiply very rapidly, the resulting progeny of one bacterium often amounting to many million in twenty-four hours.

"Milk is an ideal medium in which bacteria can grow, and if it is kept warm they develop very rapidly, feeding on the milk sugar and converting it into lactic acid. The acid causes the milk to become sour and curdles or precipitates the curd or casein.

"Bacteria grow very slowly, or not at all, at low temperatures. Since all freshly-drawn milk contains bacteria, it is important that it should be cooled quickly to forty or fifty degrees, to prevent their development. Or, if the milk is separated, the cream should be cooled if it is desired to keep it sweet. Milk in the cow's udder usually contains some bacteria, but far the larger number get into milk through dust in the stable, hairs from the cows, an unclean milker, particles of manure that may fall into the milk, or unclean utensils. To limit the number of bacteria which get into milk, the cows should be milked in a clean, well-lighted and well-ventilated stable. The cows should be well groomed and their flanks and udders dampened before they are milked. The milker should wear a clean suit and have clean hands. The teats should never be wet while milking. To avoid dust in the stable, it is well to sprinkle the floor lightly and feed no hay until after the cows are milked.

"The milk should be removed from the stable as quickly as possible to milk room. This room should be light and airy and entirely separate from the stable. If the gravity method of separating the cream is used, the milk should be cooled quickly to forty or fifty degrees Fahrenheit. There are three different forms of the gravity system: The "shallow pan or crock," the "deep setting," and the "water dilution." The last-mentioned is not worthy of discussion, as it is wasteful and non-efficient.

"Of the other two methods, the "deep setting" is the more satisfactory. It consists of a deep, narrow can, sometimes called a shotgun can, which is set in cold water. When the cream rises it can be removed with a ladle or dipper. The cream rises in it more quickly and more thoroughly than in the "shallow-pan" system, which consists of putting milk into pans or crocks.

"For a person keeping five or more cows, it it is economy to own a hand separator. According to the Purdue Experiment Station, by using a cream separator there is a saving of $3.50 to $7.00 per cow per year over the gravity system. Besides a more thorough skimming, the centrifugal separator produces a better quality of cream and a more satisfactory thickness, removes many bacteria and other impurities and produces a skim milk in good condition for feeding. If separator is used, the milk should be separated while still warm, as the separator has its greatest efficiency if the milk has a temperature of ninety to ninety-five degrees Fahrenheit. If the cream is to be held for several days before churning, it should be kept in a can with a clean cloth tied over the top, to keep out the dust. It should not be subjected to odors of any kind, as cream and milk absorb odors very readily. If milk or cream is kept in the same compartment of a refrigerator with meat, vegetables or fruit, it will take on strong odors and tastes, which are often mistaken for a sour or impure product. No new cream should be added to the old until it has been thoroughly cooled.

"Oftentimes buckets, strainers and other utensils have crevices and corners in which milk and dirt may lodge and become the source of numberless bacteria and bad odors. This may be avoided by using only vessels which have no sharp corners and in which all crevices have been filled with solder. The cream separator, if not properly cleaned, is also a source of bacteria, though if properly cared for it will eliminate part of the bacteria from the milk and cream. It should be carefully washed and aired after each separation. In washing separators and other milk utensils, it is well to observe the following rules: First, rinse the parts in clear, lukewarm water, then wash in hot water, using washing powder. Rinse in warm water and sterilize by holding over live steam or dipping in boiling water. Set where the parts may drain well and dry by evaporation. Never wipe them dry with a cloth, as most drying cloths are infested with bacteria. If possible, put them where they will be exposed to the direct rays of sunlight, as sunlight is a great germicide."

BOWSHER FEED MILLS — **GROW HEALTHY STOCK**

Crush ear corn (with or without shucks) and grind all kinds of small grain and **Head Kaffir.**

Handy to operate—**lightest running.** 10 sizes: 2 to 25 h. p., capacity 6 to 200 bushels. Conical shape Grinders. Different from all others. Also make Sweep Grinders.

DAIRY AND CREAMERY.

Rail receipts of milk at Boston during the first six months of 1913 totaled 55,904,609 quarts, compared with 50,138,187 quarts during the corresponding period of 1912, an increase of 5,766,422 quarts.

At the National Dairy Show the gold medal for best butter made from whole-milk cream was won by S. R. Miles, of Buchanan, Mich., with a score of 95.33. This was in the Dairy Show competition; not in the exhibit of the National Creamery Buttermakers' Association.

Many of our dairymen with large herds of cows are looking forward to the time when the milking machine will be so perfected that it can be used in every dairy. Up to the present time some of the obstacles to machine milking remain to be overcome.

The cleaning of the milking machine is the most colossal obstacle of all, for, of course, any such cleaning must be done with small expenditure of time and money. It is possible now to clean the machines, but the cost is too great to make it a thing that can profitably be done twice a day.

In general, it may be said that the bacterial content of machine-drawn milk is greater than of hand-drawn milk; but, on the other hand, some of these bacteria are not of a kind that have an influence on the milk. This is another element of uncertainty.

We not only need the milking machine adapted to the milking of many cows at one time, but to the milking of a single cow. Perhaps we will some day have a machine of that kind. If we do, it will revolutionize the business of dairying. At the present time the number of cows in a dairy is largely limited by the problem of getting them milked. Also, many familes that do not keep a cow would do so if the problem of milking could be solved.

Cow-testing associations have proved of great advantage to some communities and should prove so to all. It is possible through such associations to have the cows in a locality tested at small expense per cow. The elimination of the cows that are not making a profit means a reduction of cost of keeping them and of the time required to take care of them.

To start a cow-testing association, correspond with the State Experiment Station, from which will be obtained a statement of the ways by which such an association can be started. No general statement can be made, as each state differs in its facilities for doing this work.

The unprofitable cow is still one of the greatest factors in dairying. It is believed that about one-third of the cows in the farm dairies are not more than paying for their feed, while many of them are actually not doing that. It is safe to say that on American farms there are millions of cows that are so unprofitable that their loss would be the gain of their owners. Then why not lose them? The principal reason for not losing them is, that their identity is not known. They are kept with other cows, fed with other cows, milked with other cows, and no account is kept with each one separately. Therefore the farmer goes on from year to year doing the work of caring for them at a loss.

DE LAVAL CREAM SEPARATORS

MAKE FALL AND WINTER DAIRYING MORE PROFITABLE

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one. A De Laval Machine will save its cost by spring, and may be bought on such liberal terms if desired as to actually pay for itself meanwhile.

The De Laval Separator Co.

New York Chicago San Francisco

A testing machnne will cost but a few dollars, and a man can easily learn how to use it. It would pay to buy a milk-testing machine even if but one poor cow could be got rid of through the light it would give.

The owner of a single cow needs to study the science of dairying as certainly as other cow owners. Sometimes the one cow, if properly handled, represents a very profitable investment.

Pay No Tribute TO THE TRUSTS! Reduce Your Cost of Living

"A penny saved is a penny earned."

Why pay tribute to machinery and oil trusts? Have your farm work done by engines at factory prices—save money on your engine and on its operation. Kerosene is getting lower in price, gasoline is constantly advancing.

The Amazing Detroit Kerosene Engine

—sold to you at factory prices, is the engine which will help you beat the Trusts. It runs on cheap kerosene (coal oil), uses alcohol, distillate or gasoline also—runs in either direction—has only 3 moving parts—throttle governed—water cooled—speed controlled while running—sold on 5-year guarantee and 15 days' trial. Every engine tested and shipped ready to run.

NO Cams Gears Valves **NO** Sprockets Cranking Trouble

Engine pumps, saws, threshes, churns, separates cream, grinds feed, shells corn, does other farm work. Simplest engine in the world. Why pay trust prices when you can get Amazing Detroit at factory figures?

Cylinders cannot carbonize.

Increased Production of Wheat, Barley and Oats in Europe.

A cablegram from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, containing the following information:

The total production this year in the principal producing countries of the Northern Hemisphere of wheat is 9.2 per cent. more: of barley, 7.5 per cent. more; and of oats, 0.8 per cent. more than produced in the same countries last year: Prussia, Belgium, Denmark, Spain, France, Great Britain and Ireland, Hungary, Italy, Luxemburg, Netherlands, Roumania, Russia in Europe (sixty-three governments), Switzerland, Canada, United States, India, Japan, Russia in Asia (ten governments), Algeria and Tunis.

For European Russia the preliminary figures of production this year are: All wheat, 838,000,000 bushels; barley, 550,000,000 bushels; oats, 1,101,000,000 bushels.

WHEAT MARKET SITUATION.

Comparatively Little Change During the Month of November—A Ten to Fifteen-cent Decline During the Year.

On the last day of November, 1913, cash wheat at St. Louis sold on basis of No. 2 red at 93 to 93¾ cents a bushel, and No. 2 hard at 86 to 93 cents a bushel. The actual difference between these figures and the previous monthly closing quotations was very small. The following tabulated statement gives the quotations on the closing day of each month so far in the year 1913:

St. Louis Cash Wheat Quotations.

1913.	No. 2 Red Wheat.		
Jan. 31	$1.08	to	$1.12½
Feb. 28	1.06	to	1.09
March 31	1.05	to	1.07½
April 30	1.09	to	1.11
May 31	1.03	to	1.06½
June 30	89	to	91
July 31	83¾	to	85½
Aug. 31	89	to	92½
Sept. 30	92	to	95½
Oct. 31	95	to	96½
Nov. 30	93	to	93¾
1913.	No. 2 Hard Wheat.		
Jan. 31	90	to	94
Feb. 28	30	to	92
March 31	90	to	91
April 30	83	to	95½
May 31	93	to	94
June 30	89½	to	93
July 31	83¼	to	90
Aug. 31	85½	to	90
Sept. 30	87½	to	93
Oct. 31	86½	to	92
Nov. 30	86	to	93

For the actual trade in wheat covering contracts for future delivery we have to look to Chicago. The December option is now in the spot light, and there is plenty of time for new figures to develop between the 1st and 31st of December.

When we first began to notice the December option on May 31st, the quotation was 94⅛ cents a bushel. Since then the quotation has fluctuated until on December 30th the price was 86¼ cents. The next option of consequence and by far the most important option of the year is May. The first quotation we saw was 95⅛ cents a bushel on August 30th, and the last (November) quotation was 90¼ cents. We herewith submit the closing wheat options since and including May 31st, 1913:

Wheat Option Quotations.

1913.			1914.
	Sept.	Dec.	May.
May 31	91⅞	94⅛	....
June 30	90	93⅛	....
July 31	86	89⅞	95⅛
Aug. 30	85⅞	89⅝	94½
Sept. 30	85⅛	87⅝	92⅝
Oct. 31	....	86¼	90¾
Nov. 30	....	86¼	90¼

There is the wheat market situation in a way that is easy to understand. Nine months ago No. 2 red wheat shipped to the St. Louis market sold at $1.08 to $1.12 per bushel. On November 30th the No. 2 cash wheat at St. Louis sold at 93 to 93¼ cents a bushel, exhibiting decrease market valuation of 15 to 18¾ cents a bushel in the past eleven months.

Last May 31st, the December wheat option was quoted at 94⅛ cents a bushel, and on November 30th the quotation was 86¼ cents a bushel, a decrease of 7⅞ cents a bushel in six months.

Last July 31st, the May option of 1914 was quoted at 95⅛ cents a bushel, and on November 30th the quotation had declined to 90¼ cents, a loss of 4⅞ cents a bushel in four months.

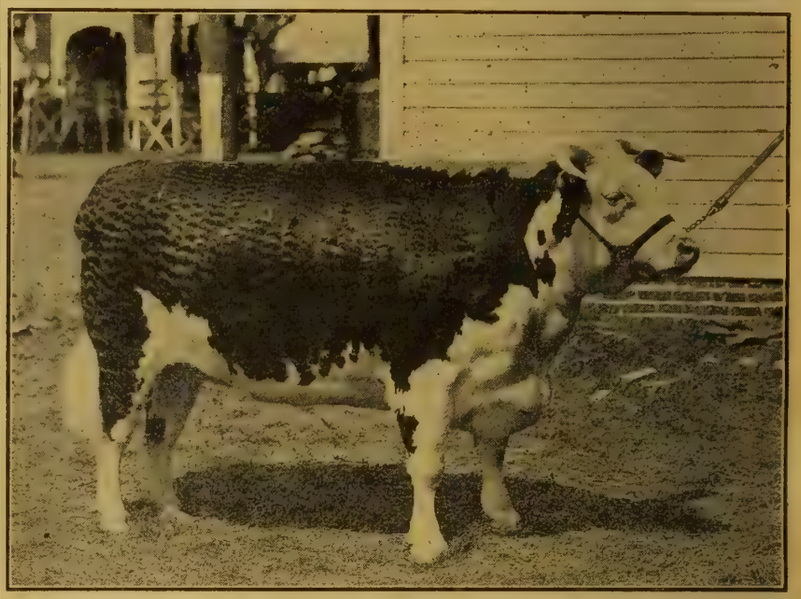
From the beginning of the year there has been no statistical reason for wheat to sell lower. The admission of foreign wheats free of duty was for the purpose of reducing the price of wheat in this country, and prices here have been gradually assuming the level of all other countries of the world, the ocean freights alone standing as the entire barrier of foreign wheat invasion. The shadow of the admission of foreign wheats has stood over the wheat market like a dark cloud, and in our opinion, in the year 1913 has caused an average loss to our own farmers of six cents a bushel, which on a fifteen-bushel average production per acre has cost the farmers ninety cents per acre, and on the entire crop of 750,000,000 bushels a loss of $45,000,000. If so far one American cent has been saved to the beloved consumer in buying bread we have not heard of it, for the "high cost of living" still goes on, notwithstanding the free-trade discrimination against the farmer.

Marketed Lambs at the Top.

On December 1st, at the St. Louis market, A. B. & A. C. Thorpe, of Moulton county, Iowa, marketed two loads of lambs that contained 102 head that averaged seventy-six pounds and sold at $7.75 per 100 pounds, the highest price of the day, and 127 head that weighed seventy pounds and sold at $7.65 per 100 pounds.

On December 1st, at St. Louis, the wholesale market for feathers was quoted as follows: Prime white live goose, 67c.; prime gray do., 48c.; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10c.; xxxx, 3c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 48c.; dark, 35c. Chicken—Prime dry-picked body, 3c.; wet, damp and quill-mixed, 2c. Turkey—Body, dry, 8c.; quill-mixed, 18c.

Silo Owners REMEMBER that proper cutting and filling are as important as the Silo itself.
The Dick Blizzard Ensilage Cutter, with very large capacity, works steadily, takes whatever is fed to it without a hitch, and outlasts any machine of its kind. It is the most profitable machine to buy and is fully guaranteed.
Free Catalog, with full information, on request.
Weber Imp. & Auto Co., 1900 Locust st., St. Louis.



PERFECTION LASS—Hereford cow. Highly representative of the best in the Hereford family of beef producers. A grand champion among grand champions. Exhibited by J. P. Cudahy, Kansas City, Mo. Another picture of PERFECTION LASS is on page 291 of our Book of Live Stock Champions advertised in this edition.

MISSOURI STOCK RAISING. The main stock barn on Prairie View Farm, owned by W. E. Files, near Lamonte, Mo. It is 58 by 60 feet. An open shed provides shelter for some young stock. Mr. Files is shown holding one of his Percheron stallions in front of barn. This barn, as well as all other buildings on the farm, is lighted by electricity from Mr. Files' private plant on the farm. The farm covers 240 acres.

TRAPPERS LET US PAY YOU MORE MONEY FOR **FURS**

St. Louis is the largest fur market in America and the biggest buyers in the world gather here. F. C. Taylor & Co. is the largest house in St. Louis, receiving more furs from trappers than any other house in the world and our enormous collections are always sold at top prices, which enables us to pay you more.

WE WILL TEACH YOU HOW TO TRAP

Trapping is not hard work if your outfit is complete. You need a few good traps, the best bait and your spare time morning and night. Our big new Supply Catalog and Book on Trapping is ready and you can have a copy FREE if you write today. The book tells you when and where to trap, kind of traps and bait to use, how best to remove and prepare skins, etc.; also contains trapping laws of every state. Price lists, shipping tags, etc., also free. Get busy at once—big money in it. Write for book on trapping today.

The St. Louis Apple Trade.

On December 1st, at St. Louis, apples at wholesale were selling as follows: Quote fancy cold-storage apples: Ben Davis at $3.00 to $3.75; Huntsman's at $3.50 to $4.00; Jonathan at $3.50 to $5.00; Grimes' Golden at $4.00 to $4.50; Winesap at $4.25 to $5.00; Willowtwig at $3.50 to $4.00; Virginia York Imperial at $4.50 to $4.75—No. 2 and inferior less. Quote current receipts: Ben Davis at $1.75 to $1.90 for No 2 to $2.50 to $2.75 for No. 1; Winesap at $2.25 to $4.00; Willowtwig at $1.75 to $2.25 for No. 2 to $3.25 to $3.75 for No. 1; other varieties accordingly; common, small and inferior fruit at $1.25 to $1.50. New York packed Baldwins at $3.50, delivered, for No. 1, and $2.50 for No. 2; Greenings at $3.75, delivered, for No. 1, and No. 2 at $2.75. Sales: One car No. 2 New York Baldwins at $2.50, delivered; one car No. 1 New York Greenings at $3.75, delivered; 100 barrels fancy Ben Davis (out of cooler, for shipment), at $3.75; sixty barrels Winesap (do.) at $5.00.

FIELD OF COWPEAS ON POOR LAND RENTED BY STATE NORMAL AT WARRENSBURG, MO., FOR USE IN THEIR AGRICULTURAL DEMONSTRATION WORK. There are 4½ acres in the plat, the rows being three feet two inches apart. In 1912 the Normal rented this land on a basis of one-third the crop, and put it in cowpeas, as shown here. The crop looked so good before time to harvest that the Farm Director, B. A. Pratt, offered the owner $30 cash as rental and release the one-third contract, which the owner gladly did, not expecting to get nearly so much for the use of his land. The school got thirty-three bushels of seed, which they sold at $2.50, making $82.50, and the ten tons of cowpea hay, which they fed but could have sold for $10 a ton, which made a total of $182.50 from the crop. This is not a large return on cowpeas generally, but considering the poor ground, they were well satisfied, and the ground is in better condition this year.

Cash Grain at St. Louis.

The following prices represent cash grain at St. Louis, November 29th, the closing day of the market for the month:

Wheat.—No. 2 red wheat, 93 to 93¾c.; No. 3 red, 90 to 91c.; No. 2 hard, 86 to 93c.; No. No. 3 hard, 85½ to 90c.

Corn.—No. 2 corn, old, 77c.; No. 3 new, 67½ to 68c.; No. 4 corn, new, 66½c.; No. 2 yellow, old, 77½c.; No. 3 yellow, new, 66½c.; No. 4 yellow, new, 66½ to 67c.; No. 2 white, old, 77c.; No. 3 white, new, 67½ to 68c.; No. 4 white, new, 66½c.

Oats.—No. 2 oats, 40½c.; No. 3 oats, 39½c.; No. 2 white, 42c.; standard, 41 to 41¼c.; No. 3 white, 40 to 41½c.; No. 4 white, 39c.; No. 2 rye, 61½c.

A Nursery Proposition.

On page 12 will be found a proposition by the H. J. Weber Nursery Company at Nursery, St. Louis county, Mo. This nursery was established in the year 1867, and is one of the best known in the trade. They grow fruit and ornamental trees, evergreens, shrubs, wholesale and retail. Our readers who deal with this firm will find Messrs. Weber will fill orders exactly and give perfect satisfaction.

Wiping Out Hog Cholera.

The day may come when hog cholera will be a thing of the past in the country—when it will be remembered as a horrid nightmare. But every farmer and hog raiser knows that that day is by no means here as yet, and that there is little chance of its appearing with the dawn of tomorrow. As a matter of fact, cholera has been unusually virulent during the past year. There is always danger in feeding hogs the soft and mouldy corn that a horse would not eat. Very often it causes one of the worst forms of indigestion and gives rise to a diseased condition which, in many of its symptoms, closely resembles cholera and which results in an enormous hog loss every year. As a correction and preventive the judicious use of Merry War Lye makes soft corn feeding safe because it is anti-fermentative and renders the feed easily digestible.

Merry War Powdered Lye is for sale at nearly all grocers, druggists and feed dealers. If not to be had from local dealers, write us and we will gladly tell you where it may be obtained or supply you direct, and will also send free a valuable booklet, "How to Get the Biggest Profits From Pork." E. Myers Lye Company, Dept. 22, St. Louis, Mo.

St. Louis Root Quotations.

Wholesale prices at St. Louis, December 1st. Quote by the pound: Golden Seal, $4.55; Lady Slipper, 17c.; Seneca, 54c.; Pink, 35c.; Black, 8 to 8½c.; May Apple, 6c.; Snake, 32c.; Blacksnake (Echinacea), 10 to 11c.—split, half price; Angelica, 5c.; Wahoo—Bark of root, 20c.; bark of tree, 5c.; Wafer Ash Bark, 6c.; Blueflag, 2½c.; Sassafras—Bark of root, 5c.; Wild Ginger, 7c.; Spikenard, 3c.; Skullcap leaves—Bright, 9c.; dark less; Wild Ginseng, $7.75 to $8.00; transplanted, $5.00 to $6.00; cultivated, $2.50 to $5.50.

In New York City, according to all accounts, the difference between wholesale and retail prices of eggs is about 35 cents a dozen.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use oil. He calls it powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 66 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd.** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

HEAVY EATING PIGS.

Most Economical Pork Producers—Shown by Tests in Oregon.

A most promising field for the development of a strain of pigs with a greater feeding capacity has been opened up at the Oregon Agricultural College as a result of the latest feeding tests made by Professor G. R. S. Samson, of the Animal Husbandry Department. It was shown in this test that the pigs that made the greatest profit were those which had the greatest capacity for consuming feed. In feeding 100 pigs similar to the best feeders for fifty-one days at present prices of hogs and feed, the owner would realize a profit of $297.80, not counting labor and investment. In feeding 100 pigs similar to the poorer eaters the profits would be but $115.65.

On September 1st, thirty pigs of different litters were divided into three lots of ten each, and all were fed a ration of 90 per cent. barley and 10 per cent. tankage for sixty-one days. Lot No. 1 was fed dry rations by hand. Lot No. 2 was fed by a self-feeder. Lot No. 3 was fed by hand rations that had been soaked for twelve hours previous to feeding. The three lots were divided evenly as in weight, sex and parentage. The litters were likewise divided evenly among the lots as nearly as possible.

Lot No. 1 consumed 463.5 pounds of feed for each 100 pounds of gain. Lot No. 2 consumed 418.2 pounds of feed for each 100 pounds of gain; and Lot No. 3 consumed 449.8 pounds of feed for each 100 pounds of gain.

The difference in daily gain among the litters of pigs was from 1.42 to 1.86 pounds. The difference between the lots varied only from 1.48 to 1.84 pounds. The poorest lot was better than the poorest litter, and the best lot was poorer than the best litter. That is, the variation among the lots was less than the variation among the litters.

The best individual pig gained 2.44 pounds daily for sixty-one days, while the poorest individual gained but one pound daily for the same time. The daily gain made by the individual litters was as follows: 1.42, 1.43, 1.47, 1.67, 1.85 and 1.88.

As to the value of the self-feeder, these tests confirm previous tests carried out at that Station and at others, that the self-feeders are economical means of pork production. The labor of feeding is cut down more than one-half by the use of the self-feeders, while the daily gains are more rapid, and also greater per 100 pounds of feed. No difficulty was experienced in getting the pigs accustomed to that method of feeding.

IMPORTANCE OF LEGUMES.

United States Agricultural Department Statement of Facts Prepared For the Use of Our Readers.

"Among various causes that have led to the abandonment of land once cultivated there is no doubt that the greatest single cause has been the failure to utilize legume crops. Without the rational use of legumes in a rotation, the depletion of nitrogen and the consequent falling off in productivity is certain to occur."

The above statement is made by the Department of Agriculture in connection with the use of legume crops in rotation methods of farming. It is rarely possible to keep up the supply of nitrogen from the humus derived from non-leguminous plants.

"There are sixteen important leguminous field crops used in the United States, namely: Red clover, alfalfa, cowpeas, alsike clover, crimson clover, white clover, soy beans, peanuts, Canada peas, hairy vetch, common vetch, velvet beans, Japan clover, sweet clover, bur clover and beggar weed.

"In comparatively few cases does it happen that one of the legumes can be used in place of another," continues the statement. "Cases in which there is a choice are red clover, alfalfa, alsike clover and sweet clover; cowpeas, soy beans, peanuts and Japan clover; crimson clover, hairy vetch and bur clover; velvet beans and beggar weed. The Department has been frequently asked by farmers, where there is a choice of legumes adapted to the same purpose, which one adds the most nitrogen in the soil.

"To some extent this is determined by the amount of nitrogen contained in the crop. Thus, of 1,000 pounds of green plants, cowpeas contain on the average 3.7 pounds; common vetch, 4.1 pounds; Canada peas, 4.3 pounds; Mammoth clover, 4.4 pounds; crimson clover, 4.6 pounds; velvet beans, 5.4 pounds; hairy vetch, 5.5 pounds; sweet clover, 5.8 pounds; alsike clover, 6 pounds; soy beans, 6.5 pounds; red clover, 6.9 pounds; alfalfa, 7.4 pounds; and bur clover, 8.5 pounds of nitrogen.

"Additional advantages considered more or less important in connection with green manuring are based on the root structure of the plant. Unquestionably, legumes with stout roots which penetrate the soil to considerable depths do have a somewhat similar effect to a subsoiler, and, furthermore, put vegetable matter at depths which shallow-rooted plants can not reach.

"Investigations prove the high value of the common legume crops, whether used in rotation or as green manure crops. Results obtained from their use are far more striking in poor soils than in rich soils. Perhaps the safest rule to apply where there is a choice of two legumes is to use the one which gives the largest total yield per acre, or, if these are about equal, to use the one whose seed is cheapest.

"The plowing under of green manure crops as a regular operation is seldom carried on except in orchards. In this case there can be but little doubt that the operation is highly profitable. With field crops the plowing under of a green manure crop is seldom justifiable except in the case of very poor lands, or at considerable intervals, because ordinarily it is far more profitable to utilize the crop for feed and then to return the manure to the soil."

Profit on Feeding Calves.

"On September 18, 1912, a farmer of Jessamine county, Kentucky, bought a bunch of thirty-three steer calves for $596. He fed them on the choicest feed and grass and sold the bunch November 5, 1913, for $1,970.30."—Farmers' Home Journal.

Mutton is selling low enough on foot to discourage sheep raising, and mutton at retail in cities is being sold at famine prices.

The Book of LIVE STOCK CHAMPIONS.

EDITION OF 1912.

NOW READY FOR DELIVERY.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

One Thousand Champions,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in THE BOOK OF LIVE STOCK CHAMPIONS are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

THE BOOK OF LIVE STOCK CHAMPIONS is published as a Souvenir Supplement to THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements.

AN EXTRAORDINARY OFFER.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to THE NATIONAL FARMER AND STOCK GROWER. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. No finer volume was ever offered. Send One Dollar with your order to

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to THE NATIONAL FARMER AND STOCK GROWER, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of THE BOOK OF LIVE STOCK CHAMPIONS, latest cloth-bound edition.

Hansen's H Your Glove

The Care of Harness.

"It is worthy of note, apart from a matter of comfort, how much more work can be done by a horse with properly fitting harness that is kept in good condition, than with any clumsy collar that seems to have just been thrown on and fits where it touches.

"Just imagine the discomfort to a small man having to wear a large man's clothes and work in them all day, or a large man working in a small man's clothes. It makes a great difference whether harness is kept soft and pliable, hard or rough, whether it fits snugly or not.

"There are more horses permanently injured by badly-fitting harness than most people are aware of. Harness should be kept in a dry place when it is finished with. Generally in the spring, when all the work seems to come on at once and all the horses available are required, some collars, etc., are brought out that were put away perhaps the previous autumn; if these were well cleaned and oiled before being put away, they will be found to be soft and pliable; but if not, and they are hard, rough and probably damp, it is nothing short of cruelty to put such like on any horse, let alone on a young one that is about to be hitched for the first time perhaps. The oily surface of the leather and the sweat from the animals cause the dust to adhere to it, and thus make it dry and uncomfortable. First wash all this off and then before really dry apply the oil and work it into the leather as much as possible.

"Neatsfoot oil answers this purpose well, but there are several excellent harness oils that are worth using, after which place the harness out of doors, and then when dry, rub clean. When harness has been unavoidably made wet it should be partly dried and rubbed over, then oiled before it has the chance to get hard; by doing this it will be found to last much longer."—Harness and Saddlery.

The Lodging Evil.

Lodging has sorely tried the philosophy of the most of us, and, to make matters worse, it shows in the best-looking crops, as well as in those obviously ill-nourished. In Europe, particularly France, where acre yields of forty to fifty bushels are common, ordinary salt is sometimes used as a preventive, but while it is effective to a limited extent, it is not a true plant food, and only too often checks lodging at the expense of the yield of grain. The best remedy against lodging is the strengthening of the stalk by applying potash to the land in available form.

The potash enforces the cellular structure of the straw, making it strong and resistant to blight and mildew, and to a considerable extent promotes the maturing of the crop.

On the rich deep soils of the Upper Mississippi Valley wheat lodging is so common that these crops are much restricted in area. This is chiefly due to the fact that the crops are strong foragers and find in these soils so much nitrogen that too rank a growth is made, which results in a poorly-filled out and matured grain, light in weight and low in grade. A German practice, which seems to be justified by the fact that it returns profitable results, is to broadcast potash salts on small grains.

Because of the failure of small grains in the rich valley soils, corn has become the chief grain crop, and as a result, the corn must be used in large part on the farm itself, and small grain farming has become subordinate to stock growing. Now, these conditions may be wholly altered by deeper plowing, spring rolling and the use of potash broadcasting to check lodging. The potash will not only be useful as a lodging remedy, but it will enable the rich soils of the valley to bring the grain production of the cereal up to the straw production.—Frank Ladd.

How to Tell the Age of Cattle.

"The calf when born has two pair of incisors, the other two pair appear during the first month. When a calf is eighteen months old it loses the middle pair of milk incisors, and grows a permanent pair. The next pair, one on each side, is replaced at twenty-seven months of age, the third pair at thirty-six months, the fourth or outside pair at forty-five months. The time of appearance of these incisors varies within rather narrow limits, so that we are able to tell the age of young cattle fairly accurately.

"The calf also has a temporary set of molars, which are later replaced with permanent ones, but they are not considered in estimating the age of the animal."—G. E. Morton, Colorado Agricultural College, Fort Collins, Colo.

Feeding the Farm Horse.

"The feed of the farm horse should be of as good quality as that given to higher-priced anmals used in the cities, or on the race track. The question of mode of feeding is an important factor in keeping the farm horse healthy. Most of the hay should be fed at night, when the horse has plenty of time to eat. The hay should be of good quality. All mouldy or musty hay should be rejected as unfit for feed. By selecting only good hay, the danger of heaves is avoided. The most natural grain for the horse is oats. The oats should be well matured and not mouldy. Bran has very little nourishment in it, but serves as a bowel regulator. If a quart of bran is fed each animal with the oats the danger of colic is lessened.

Whenever possible, one should make it a practice to feed the farm horse after it has had thirty minutes or an hour to rest, before trying to digest its concentrated food. In other words, let the farm horse eat a little hay while warm, and after it has entirely dried off, water and grain. During a resting period, feed more bran and less oats. Then there will be less danger of azotoria after the horse is put back to work.

A well-regulated barn of modern type is equipped with watering trough in the barn. If possible, all horses should have an opportunity of drinking pure water at any time while in the barn, if the horse is not too warm. Some ranchers find it a paying proposition to set a pail of water in for each horse before retiring. This gives the horse an opportunity to have water when it needs it the most, while eating the dry hay.

"So many horses have injunction colic from eating large quantities of straw during the winter. The horses keep in the shelter of the straw stacks and will not hunt water during severe weather."—C. L. Barnes, Colorado Agricultural College.

Notwithstanding the Missouri corn crop decreased from 32 bushels per acre in 1912 to 17.5 bushels in 1913, there remained 15,854,000 bushels on the farms on November 1st, 1913, against 4,618,000 bushels on same date last year.

AMERICAN STEEL & WIRE CO.'S

Thoroughly Galvanized Wire

A New and Decided Advance in the Manufacture of Wire for Woven Wire Fences

A Galvanizing of Great Durability, Originally Developed and to be Found only in the American Steel & Wire Co.'s Fences

THE American Steel & Wire Company is the first to develop a THOROUGHLY GALVANIZED WIRE. It has a thicker coat, a quality more refined, and a deeply adhesive contact of the zinc and the steel that solidly unites the two metals, highly flexible without injury, and having a finish and weather resistance unequalled—a *thoroughly galvanized wire.*

There are wonderful records of super-extraordinary efficiency, such an an auto tire lasting 30,000 miles; a pair of shoes, suit of clothes or a wagon showing astonishing durability; two ships built exactly alike, one being vastly better; or a certain piece of woven wire fencing apparently indestructible under long years of severe trial.

Years ago, in making and galvanizing steel wire, we searched out the reason for this spasmodic super-excellence, and found it to be the *chance combination of a high state of perfection*, in the finest detail, of *man, methods, machinery* and *materials*. We then mastered these fickle elements of chance by the employment of a tremendous manufacturing organization and brought them under control for steady and continuous production.

We now announce the final completion of our facilities for the extensive and permanent production of this thoroughly galvanized wire. We shall use it in the manufacture of our celebrated woven wire fences—the AMERICAN FENCE, the ELLWOOD FENCE, the ROYAL FENCE, the ANTHONY FENCE, and all our other fences.

These fences are adapted for all field, farm and poultry uses, and possess superior structural advantages in quality of steel and fabric. Dealers everywhere throughout the country display these fences and will quote lowest prices.

They cost no more than other fences, and considering the *extra large and heavy wires* used, and the exclusive use of new *thorough galvanizing*, makes them especially attractive as the best and cheapest fences.

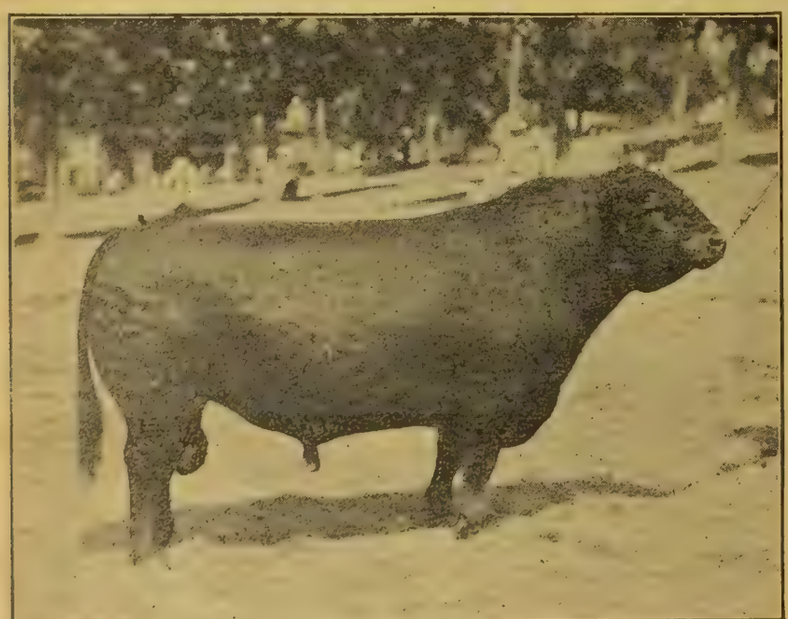
BELGIAN STALLIONS—Exhibited by Taylor & Jones, Williamsville, Ill. The picture was taken in 1912 at the Illinois State Fair, where they received the award as best five Belgian draft horses. This breed has made great gains in the United States in the past ten years.



FEARNOT OF MAPLES—Famous Galloway bull. Exhibited at shows of 1913 and winner of grand championships. Owned by C. S. Hechtner, of Chariton, Iowa.

Beef Cargo Breaks Record.

On December 1st, at New York City, the steamer Zinal arrived from Buenos Ayres, Argentine Republic, with a consignment of beef that was estimated at one thousand tons or 2,000,000 pounds. It was surely the largest cargo of refrigerated beef thus far received at New York City free of duty. It consisted in part of 11,000 quarters of chilled beef, 1,000 quarters of frozen beef, fifty bags of ox hearts, fifty bags of ox tails, fifty cases of ox livers, twenty-five cases of tongues, and 300 bags of boneless chuck steak.

In this connection it is well to state that customs receipts of the United States government for November fell off about $4,500,000, compared to November, 1912. November was the first full month of operation for the new tariff, and if the month was a fair test of the bill's revenue-producing powers, the annual collections from this source will decline more than $50,000,000, which has to be made up by increased home taxation.

St. Louis Horse Market.

At the St. Louis National Stock Yards, in the month of November, 15,522 horses and mules were received, which is an increase of 5,508 over the previous year. The year's receipts so far amount to 138,101 head, with another month to be heard from. Mr. T. H. Holland, of Holland, Nugent & Maxwell Bros., holding Monday and Tuesday auctions each week, reports that an addition to usual receipts of ten to fifteen car-loads a week will help the sales by enabling more buyers to fill their orders. There is a splendid demand for small riding horses to good Southerners up to 1,100 pounds. Big horses are wanted, but not at fancy prices. Any shipper of horses who wishes to get in touch with the best, quickest and most economical horse market in regard to expenses, should write or ship to Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

St. Louis Hog Market.

On December 1st, at St. Louis, the top of the hog market was $8.00 per 100 pounds for strictly choice 243-pound hogs shipped by Wm. Criffy, of Carroll county, Missouri. There were several loads, 206 to 287 pounds, that sold at $7.95. The bulk of the offerings sold at $7.50 to $7.80 per 100 pounds, and light mixed sold largely at less than $7.50 per 100 pounds. The packers bought largely at $7.40 to $7.50 per 100 pounds. The best lights, 180 to 190 pounds, sold at $7.80 to $7.95 per 100 pounds.

Native Beef Cattle Prices.

The December market for native steers at St. Louis opened with a top load of 1,615-pound steers shipped by F. O. Link, of Calloway county, Missouri, that sold at $8.85 per 100 pounds to Armour. Other sales were fourteen head, 1,273 pounds, at $8.40; forty head, 1,201 pounds, at $8.40; twenty-one steers, 1,277 pounds, at $8.35; forty-six head, 1,272 pounds, at $8.35; nineteen head, 1,552 pounds, at $8.15; forty head, 1,162 pounds, at $7.90; eighteen head, 1,243 pounds, at $7.65; forty head, 1,019 pounds, at $7.15; twenty-eight head, 824 pounds, at $7.50; twenty-four head, 870 pounds, at $7.00; seventeen head, 785 pounds, at $6.15—all sales being at the price stated per 100 pounds.

Missouri Cattle on Feed.

On November 15th the Missouri State Board of Agriculture estimated the number of cattle on feed, as compared with an average year, 55 per cent.; stocker or feeder stuff, 68 per cent.; breeding cows, 79 per cent. As compared with cattle on farms one year ago, percentage shows: Fat cattle, 62; stocker or feeder stuff, 71; breeding cows, 78.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. 218 Union Stock Yards, Chicago, Ill.

Don't Have a Blind One

"VISIO"

A Remedy for Moon Blindness

(Opthalmia), Cataract and Conjunctivits
Shying horses all suffer from diseased eyes.

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Ass'n. 2472 Calumet Ave., Chicago, Ill.

Ruptured People—Get This On 60 Days Trial

You know you can't possibly tell anything about a truss or anything else for rupture merely by trying it on, for a truss or so-called "appliance" may seem allright at first and afterward prove utterly worthless.

But here is something you can try sixty days—just as a test—without having to risk a single cent.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23rd St., New York City

Be Safe!

Don't take chances with spavin, splint, curb, ringbone, bony growths, swellings or *any* form of lameness. Use the *old reliable* remedy—

KENDALL'S Spavin Cure

Its power is testified to by thousands of users. At druggists $1 a bottle; 6 for $5. Ask your druggist for book, "Treatise on the Horse." Write

Dr. B. J. Kendall Co. Enosburg Falls, Vt.

13

St. Louis Mule Trade.

From the circular of Holland, Nugent & Maxwell Bros., horse and mule commission salesmen, National Stock Yards, Ill., December 1, 1913:

"The mule trade is about the same as it has been. Good, finished cotton mules are selling all right, and good miners and pit mules; but the plain, common class are hard to sell, and we have to peddle them from Monday morning to Saturday night in order to get them sold. We have, however, the best selling force on any market, and the more difficult the situation the better they handle it."

Chicago Live Stock.

On December 1st, which was Monday, the International Exposition was responsible for a large number of stockmen coming to the market that day, and many brought in cattle to defray expenses; the result was that 26,000 head were received. Top price was $9.60 for some choice yearlings selected out of the show cattle; most of the good yearlings sold at $9.00 to $9.50, with the good heavy steers mainly at $8.40 to $8.75; common light steers sold at $7.60 to $8.25; cows and heifers were generally steady, with the common to good selling at $5.50 to $6.50; and the fat heavy cows at $6.50 to $7.00; choice heifers went at $7.00 to $8.00; bulls ranged from $5.50 to $7.00, with the bolognas at $5.60 to $6.25; veal calves were 25 cents lower, selling at $10 to $11; stockers and feeders sold steady at $6.00 to $7.50. The hog receipts were 37,000 head; the market was generally five cents higher and quite active; top was $7.97½, with most of the good hogs at $7.80 to $7.95, and the bulk of the packing class at $7.50 to $7.65 per 100 pounds.

Quoted: Sheep receipts, 47,000 head; fair to good ewes at $4.00 to $4.50; good to choice wethers, $4.40 to $5.00; fat lambs, $7.00 to $7.50; feeding lambs, $6.25 to $6.75 per 100 pounds.

Kansas City Live Stock.

On December 1st Kansas City received 13,000 head of cattle, including 1,006 Southerners; steers steady; cows 10 to 15 cents higher; stockers and feeders strong. Prime-fed steers, $8.20 to $8.50; dressed beef steers, $7.00 to $8.00; Southern steers, $6.00 to $7.25; cows, $4.25 to $7.00; heifers, $5.50 to $8.50; stockers and feeders, $5.25 to $7.35; bulls, $4.75 to $6.65; calves, $6.50 to $10.

Hogs.—Receipts, 6,400 head; bulk of sales, $7.30 to $7.70; heavy, $7.60 to $7.77½; packers and butchers, $7.45 to $7.70; light, $7.30 to $7.60; pigs, $5.50 to $7.00.

Sheep.—Receipts, 9,000 head. Lambs, $7.00 to $7.05; yearlings, $5.50 to $6.25; wethers, $4.50 to $5.50; ewes, $4.00 to $4.60; stockers and feeders, $3.00 to $6.25—all quotations being at the price stated per 100 pounds.

Southern Cattle at St. Louis.

On the first day of December, on the St. Louis market, the Southern cattle supply consisted of sixty carloads. A string of Arkansas lightweight steers brought $5.35, and a bunch weighing slightly more went to stockers at $6.85. Two bunches of Mississippi steers went to stocker buyers at $5.75. A bunch of Oklahoma steers sold at $6.65. There was a sprinkling of fat cows that sold around $5.50, and bulk of the better grades of the stuff cleared upward of $4.85. Grown canners and cutters were steady, a range of $4.50 to $4.75 moving most of the cutters, and $4.25 to $4.40 catching the bulk of the cutters. The yearling trade was strong. Canner yearlings sold mostly at $4.25 to $4.40, while some of those able to catch stocker competition breasted $4.50. Vealers sold mostly at $5.50 to $8.50—all quotations being at the price stated per 100 pounds.

Keep Brood Sows Well Conditioned With Merry War POWDERED Lye

E. Myers, President, E. Myers Lye Company

Every hog raiser knows the importance of giving special care and attention to the health of his brood sows; for these animals are the pork producing plant of his farm. He knows he cannot expect strong, healthy litters from sickly, scrawny, poorly nourished brood sows. By feeding a small quantity of *Merry War POWDERED Lye* with the rations, the bowels are kept in normal condition, the blood at an even temperature, and at farrowing time fever will be allayed. The chances for a fine litter of healthy pigs will be greatly increased.

From weaning until marketing hogs should be kept on a *Merry War POWDERED Lye* diet—just a small quantity mixed with the feed. It *protects* hogs against cholera, destroys hog worms, keeps the hogs keen in appetite, adds weight—in short—*increases pork profits.* Don't experiment with ordinary lye. *It might prove dangerous. Merry War POWDERED Lye* is *specially* prepared and is a *safe* hog remedy and conditioner. The *experiences* of thousands of hog raisers *prove* my claims about *Merry War POWDERED Lye.* Here is a fair sample:

It Saved The Life of This Brood Sow

"I want you to know what Merry War Powdered Lye did for a valuable red Duroc Jersey sow of mine. When our sow took sick we did not know what was the matter with her. She looked just like the picture of the skinny hog in your ad., so we used a can of Merry War Powdered Lye and she was able to stand up in three days. When we began using Merry War Powdered Lye we expected to find her dead at any moment. She is now in good condition and I expect her to farrow at least 10 pigs the first of August."

MRS. A. P. SORENSEN, Otter Pond, Ky.

Prove this for yourself. Merry War POWDERED Lye is for sale at most dealers, 10c per can (*120 feeds*). It is convenient to buy in case lots—4 doz. cans, $4.80. ***Costs only 5c per hog, per month*** to feed regularly—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names; we will see that you are supplied, also send you, free, a valuable booklet, ***"How To Get The Biggest Profits From Hog Raising."*** ***Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.***

E. MYERS LYE COMPANY,
Dept. 22 St. Louis, Mo.

Which Kind Do You Want?

Native Stock Cattle.

At the St. Louis National Stock Yards, on December 1st, in the stock cattle and feeder trade, the best load of feeding steers, 870 pounds average, sold at $7.00. There was a good sprinkling of feeders that went in a range of $6.50 to $6.90. Stockers sold mostly at $5.75 to $6.45. A small bunch of Arkansas stockers sold at $5.30, and a couple of loads of Mississippi stockers brought $5.75—all quotations being at the price stated per 100 pounds

St. Louis Sheep Market.

On December 1st, at St. Louis, a load of lambs from Iowa brought $7.75, which was the top of the market, while other good lambs went at $7.50 to $7.65; fair to medium grades, $7.00 to $7.40; and the culls and poor kinds in general, $5.00 to $6.75. The best sheep on sale, shipped by D. R. Davie, of Union county, Illinois, averaged 101 pounds and sold at $4.50; and others that went to the slaughterers for mutton, $4.40. Some good stockers sold at $3.50 to $3.85; fair to medium grades, $3.75 to $3.35; old culls and canners, $2.25 to $2.65; and bucks, $3.75—all quotations being at the price stated per 100 pounds.

The Hercules Stump Puller.

Several years have passed since The National Farmer and Stock Grower received instructions to advertise the Triple-power Hercules Stump Puller, and each year we have had the opportunity to receive reports from those who purchased stump pullers through advertising in our paper. The reports were all about the same, saying: "The Hercules Stump Puller is all and more than is claimed for it; the terms of sale are reasonable, and the Hercules Company are first-class people to do business with." We take pleasure in inviting attention to page 32.

ABSORBINE

TRADE MARK. REG. U.S. PAT. OFF.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Poultry in Winter.

The poultry house is the center of interest as the time comes for keeping the poultry indoors in localities where the ground is covered with snow during most of the cold season. Some of the poultry houses to be met with on our farms are anything but a credit to the farmers that own them. The writer has seen them where the wonder was that the fowls could do anything in the way of producing eggs.

The first thing is to keep out the drafts, though the drafts are not as objectionable as no ventilation. But on the bitterly cold nights these drafts may mean frosted combs and toes. It is easy enough to stop the cracks by tacking over them some cotton cloth. This will let the air through but not in the form of a draft.

One way to give good ventilation is to have apertures that are covered with coarse cotton cloth, which will permit the passage of air, but not so rapidly as to create a draft. At the Maine Station the fowls all sleep in great sleeping cabinets that are separated from the rest of the poultry house by great curtains of cloth porous enough to permit the air to pass through. The fowls are thus given more air, while the rest of the poultry house is flooded with pure air from the open windows. This is in Maine, where the mercury gets down a long distance below zero on many a night. Yet in the sleeping cabinets water seldom freezes and the fowls never suffer the loss of comb or toe.

In the use of cloth for ventilation it must be remembered that it must not be so placed that it will be saturated with the rain, else the wet cloth will freeze solid and prevent any passage of air. Under such conditions the fowls might suffer from lack of pure air, and in extreme cases might be suffocated.

Many poultrymen and farmers are now putting in scratching sheds on the south side of their poultry houses. Some leave them open to the air, while others cover them with glass, making them as tight as any conservatory. At the Cornell Station both kinds were tried, and it was found that the fowls did best in the open scratching sheds. It is without doubt better to give the fowls work in the open air, even during the coldest days in winter.

Clean out the poultry house often in winter, so that there may be no accumulation of droppings to ferment and throw off gas injurious to the health of the fowls. Often in winter the poultry owner lets the droppings lie, as most of the time they are frozen and doing no harm. But now and then warm days and nights come, and the smell of ammonia gas in the poultry house becomes almost unbearable. If a person can stand it for only a few moments, how about the fowls that are compelled to breathe that tainted air all night, depleting its supply of oxygen every minute!

If a good supply of dust is laid in at this time it can be placed upon the floor after each cleaning, and this will prevent the droppings from freezing to the floor. Sifted coal ashes are equally good and are more easily to obtain under many conditions.

Advantage of One Breed.

"Several consignments of live poultry were one day unloaded at a poultry dealer's, and one of the shipments received one cent a pound more than did the others. Asked why he paid more for one lot than he did for the others, the dealer replied that the lot that brought the best price was all of one kind (one of the well-known breeds) and would dress out better and sell for more when dressed. He was asked if it was because they were all of one color of plumage that made them more valuable. To this he answered that it was the feathers and color that indicated the breed, and that shape and meat were indicated by the knowledge he had of that breed."—New York Produce Review and American Creamery.

Decrease in Egg Laying.

In a Canadian bulletin on the subject of egg laying, the statement is made that there (as in the United States) in a large number of instances no system of selling off hens which have outlived their usefulness as layers is practiced. It is common knowledge among good poultrymen that a hen becomes less useful as an egg producer as she grows older. Mr. E. C. Elford, in his recent publication entitled "Farm Poultry," says: "Many such experiences have gone to prove that as each year a hen grows older her egg-laying ability decreases 25 per cent." Flocks containing a large proportion of hens three to five years old are quite common, and on many farms some hens are kept as long as they will live. For ordinary farm purposes hens older than two years should not be retained. A good plan is to leg-band all pullets. Place the bands on the left leg one year and on the right leg the following year, and so on, alternating each year. In this way there will be no difficulty in identifying the older fowl.

EGG-LAYING CONTEST.

Result of the Second Year Contest Compared With the First.

Time flies, and two years have passed since the Missouri Egg-laying Contest was inaugurated at Mountain Grove, Mo., and, like the good, old St. Louis Fair, the competition was open to the world.

In the first contest the individual winner was Lady Showyou, a White Plymouth Rock hen, that lay 281 eggs in twelve months. This year the winner (the best of 700 hens) was a Rose Comb White Leghorn, owned by John Gross, of Maryville, Mo., that lay 260 eggs in the 365 days.

Last year the best pen record was made by the pen of five (5) R. C. Rhode Island Reds, exhibited by D. E. Hall, of California, Mo., with 1,042 eggs; and this year the pen of ten (10) S. C. White Leghorns, owned by Tom Barron, of Catsforth, England, was first, with a record of 2,073 eggs.

Last year the average egg laying of 655 hens was 134 eggs per hen, and this year the average egg laying of 700 hens was 143 eggs per hen per year.

Last year the second winning hen was a R. C. Rhode Island Red, owned by D. E. Hall, of California, Mo., that lay 255 eggs during the year, and this year the second-prize winner was Tom Barron's English White Leghorn that lay 258 eggs during the year.

Last year the third hen was a Barred Plymouth Rock, owned by M. H. Baldwin, of Sioux City, Iowa, that lay 245 eggs in the year, and this year the third hen is a Buff Wyandotte, with 255 eggs, owned by J. H. Clark, of West Pawlett, Vt. We received the official report of the contest too late to publish it in this edition.

POULTRY NOTES.

The extreme hot weather and drouth of the summer of 1913 was the reason why the average of the Missouri Egg-laying Contest did not increase more than eleven eggs per pen over last year.

The Third Missouri International Egg-laying Contest at Mountain Grove, Mo., starts out December 1st with 1,000 pullets in the contest. Twenty odd states and seven foreign countries have entries.

Last year, in the Missouri Egg-laying Contest, the first three hens lay 781 eggs during the year, and the first three hens this year laid 773 eggs during the year.

Family poultry raising can be conducted with a setting hen, but poultry raising as a business requires the incubator. Several of the best and cheapest incubators are advertised in this paper. The incubator is the money maker in poultry.

HIGH-PRICED EGGS.

Coaxing the Hen to Lay Eggs When There is the Best Market For Them.

"A few years ago many farmers allowed their cows to go dry early in November and then freshen in April. The farm hen sometimes does the same thing—goes dry in October and begins to lay in March. This long dry spell cuts down the possible profits." This is the explanation given by James G. Halpin, Poultryman for the Wisconsin College of Agriculture, for the present scarcity of eggs.

Mr. Halpin thinks that many farm flocks are not getting quite the attention that they really deserve and as a consequence are not meeting the demand for freshly-laid eggs.

"Right now poultry houses should be deeply bedded with dry straw," declares Mr. Halpin, "and all the grain feed should be worked into this litter so that the hens may get good exercise and amusement hunting for it. If nothing of this kind is done, the flock will huddle in one corner of the poultry house or in or about one of the other farm buildings and will seem to lose all interest in life. If the flock gets into this lazy and indifferent habit at this time of the year, winter eggs will be few and hard to get. It is well to get the hens to exercising and singing as they work for their feed and then sell fifty-cent eggs to the city buyers who want the genuine article.

"The flock should be given as great a variety of grain as possible; some corn, wheat, oats and barley mixed together or fed alternately makes a satisfactory ration. If all of the grains are not produced on the farm, then feed those that are raised. On real cold nights take some ear corn into the house, thoroughly heat it upon the kitchen stove, then break into small pieces and scatter over the feeding floor an hour or more before dark. Arrange a mash box or trough with a little ground feed where the hens may have access to it. They can then go to the 'pantry' and get 'a bite' to eat when the grain is gone from the litter. A warm mash of moist, ground feed, table scraps, etc., fed so that all of the flock has access to it and only what they will eat greedily in fifteen minutes is good for laying hens.

"As insects are no longer available, skim milk should be fed liberally. If this is not obtainable, feed some ground green bone or meat, about an ounce to each hen three times a week. If unable to provide any of these, buy commercial meat scrap, for animal feed of some sort helps to fill the egg basket."

$100 a month net from 4½ acres.

You can go down into Arkansas and Texas now, buy a farm at $15 to $30 an acre that will grow 50 bu. corn crops; but after you have been there a while you will be raising truck, like your neighbors. Truck is not a "side issue" with farmers along the

Cotton Belt Route in Arkansas and Texas.

When you can put out cabbage plants the 1st of Feb. and get 10c a head early in April, as H. F. Kapp, of Camden, Ark. does, truck means a big source of profit. Mr. Kapp makes 60 bu. corn crops, too; but his truck pays him more.

The further south you go, the greater number of acres you will find in truck and fruit. F.L.Mims, of Jacksonville, Tex. says "We gathered and sold 1,700 crates of tomatoes from 4¾ acres, which sold at 97c a crate or $1,650." The total cost of crop was only $400—that's better than $100 a month net profit for the whole year. Mr. Mims got a high price per crate because his tomatoes reached the big northern markets long before "home grown".

You don't have to run a truck farm; but if you farm in Arkansas and East Texas, you can raise a crop of truck, then follow with corn on the same land; and double your profits without increasing your investment or your expenses. With good roads, schools, close markets, phones, rural delivery, churches, etc., you don't sacrifice any social advantage in Arkansas and East Texas.

Books by a farmer—free!

We got a practical farmer to travel all along the Cotton Belt Route and talk with the farmers themselves, get pictures of their farms and their personal statements. Because he was a farmer this man knew what you wanted to know about these sections and he tells you in these free books—showing scores of actual photograph pictures of the farms he visited. You must not miss seeing these books. Send me your name and address on a post card today.

E. W. LaBeaume, General Passenger Agent, 909 Pierce Bldg., St. Louis, Mo.

Low Fare Excursions via Cotton Belt Route on 1st and 3rd Tuesdays each month. Ask me about them, write!

COTTON BELT ROUTE

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Small Flocks Fatten Best.

That chickens intended for market should be divided into small flocks and should be fed heavily on fattening feeds while giving them range in a small grass enclosure is the belief of Prof. James G. Halpin, of the College of Agriculture of the University of Wisconsin. It has been found that, as a rule, the average farmer pays little or no attention to the fattening of his market fowls, taking them to market directly from the range.

A mixture of four parts of ground corn and one part of wheat bran mixed with enough sour skim milk to make it crumbly moist is the ration best adapted to small flocks, according to Prof. Halpin, who recommends that they be fed only such quantities of the feed as they will clean up in twenty minutes.

APPEARANCES DECEITFUL.

Can You Estimate the Farmer's Labor Income by Appearances?

It is hard to tell just where and how the survey work helps each man at the farm survey meetings that are being held in the different states, but one incident which happened not long ago may be worthy of mention in this paper.

After the men returned from their first-day's field experience several records were worked up. The labor incomes shown by these records were very unsatisfactory to one man in our party, who was quite familiar with local conditions. He suggested that we go with him the next morning to a farmer who he had visited previously, as he felt quite sure we would find this man making money. This farm did present a good outside appearance, with a fine large house set back from the road, in a large grove, a $5,000 barn, etc. These buildings lay in a valley, and back of them, gently rising to a level of perhaps one hundred feet, was a large pasture field. On the other side of the road, and rising gradually from the valley, is another large pasture, which extended to the large peach orchard on the hill. The man was picking peaches from trees that showed no sign of any recent pruning or spraying, and kindly consented to give us a record. A very different picture of that farm could have been painted after receiving this record. The farm was very large, only one cow was kept, and the equipment and labor were entirely inadequate for an investment of this size. The farmer kept no accounts, had a heavy mortgage on his farm, and received a minus labor income for his year's work.

This proprietor would apear to be a first-class business man. In fact, before we left he outlined a plan of how he would soon be supplying near-by cities with fresh poultry, eggs, cream, butter and fruit, using a large auto truck. When asked about the reorganization of his farm for the production of these products he thought it would be better to buy most of them from his neighbors and put his label on them. He was asked about raising clover, but said that he had never tried it, as seed had been so high the past few years.

In the afternoon another farm was visited near this first one. The man who had selected the good farm expressed the opinion before approaching the second farm that he hardly thought the proposition worth while. This farm really did not make a very strong impression by appearances. It extended back from the main pike road and was cut in two by a typical country road running parallel to the pike. The buildings were located on a country road and a lane connected them with the pike. The house was not large, but neat, set close to the road, and enclosed by an ordinary farm house fence. The other buildings were hardly as good as the average, and one's first impression of this proprietor might be that he would never set the world on fire.

To make a long story short, this man had a labor income of more than $1,000; gave nearly all the record from his books, as he was keeping account of all household and farm receipts and expenses; had an acre of alfalfa, half of which was limed and half left without liming. On the half acre limed he secured a fine stand of alfalfa, while on the other plot the alfalfa was not worth keeping. He was interested in finding out how to test his cows and was building up his herd as fast as he was able. When leaving this farm the man giving an opinion before the record was taken had changed his mind considerably, and assured this farmer he would see him again before a great while, as he was anxious to get a picture of his alfalfa plat and also wanted to talk over several other propositions with him. —H. M. Dixon.

How to Make Starch From Potato Culls.

The potato clubs which the Department of Agriculture has been organizing to teach the young people of America to grow potatoes were primarily intended for boys. Certain girls, however, became interested, enrolled, and have done particularly well, not only in management of crop, but in manufacturing home-made potato starch out of the unmarketable culls of the vegetable.

Each girl when she enrolls in this club work, which now is being taken up by 18,000 young people, is given a recipe for making home-made potato starch. The Office of Farm Management's specialist who is in charge of the potato-club work supplies each new girl member with a printed copy, which reads as follows:

Equipment Needed.—Two clean galvanized tubs, large dish pan, one cylindrical grater and plenty of water and wiping cloths.

Take five bushels of potato culls. Wash them thoroughly by the use of plenty of water and a small scrubbing brush.

Use one tub for cleaning potatoes and the other for the gratings. Seat yourself in a convenient place between the two tubs, with dish pan and grater in your lap.

Without removing the skin, grate your clean potatoes from right-hand tub into the dish pan, empty pan of gratings when necessary into the well-cleaned tub to your left; continue this operation until your left-hand tub is a trifle over half full. Pour clean water into tub upon the potato gratings until nearly full, stir well so as to saturate every particle of water.

Remove all peelings and floating material from top of water; allow tub to stand over night, so that starch will settle to bottom and all pulp and potato skin will rise to the top of the water.

Remove all water carefully from tub in the morning, as well as the dark formation and sediment on top of the layer of starch.

Pour a fresh supply of water over starch again; stir again so as to rinse all particles of starch well; allow to stand for about eight hours.

Remove water from the top, the layer of pulp, etc. In doing so be careful not to waste the starch.

Continue this process with new applications and careful stirring, letting it stand each time—as many times as it is necessary to effect a complete separation of starch from the pulp, peeling and sediment of the potatoes. It will usually take four or five washings.

Potato starch is a healthful food and can be used in at least a dozen different ways for food purposes in making puddings, salads, milk dishes, etc. It is both an easy and economical method of providing a valuable food product for the average home.

The potato water and wastes incident to the process can be easily utilized on the farm for hogs, poultry and stock.

The Market Grading of Sheep.

Few who are in the business thoroughly understand the difference there is seen by the trade in sheep and lambs as they appear in the market. In Chicago, possibly, there is a greater variety than is seen elsewhere, therefore we take a range of quotations on November 26th, as published in the Daily Live Stock World, as follows, all quotations being at the price stated per 100 pounds:

To butchers.—Lambs, good to prime, $7.60 to $7.80; lambs, fair to good, $7.25 to $7.60; lambs, common to fair, $6.50 to $7.25; lambs, culls and coarse bucks, $5.50 to $6.50.

To butchers.—Yearlings, good to choice handy, $6.25 to $6.75; yearlings, fair to choice heavy, $5.35 to $6.15; yearlings, feeders, $5.00 to $5.65; wethers, good to prime, $4.80 to $5.10; wethers, fair to good, $4.50 to $4.80.

To butchers.—Ewes, good to choice heavy, $4.15 to $4.50; ewes, good to choice handy, $4.25 to $4.65; ewes, medium to good, $3.85 to $4.15; ewes, culls, $2.75 to $3.50.

To stocker and feeder buyers.—Lambs, fair to best feeders, $6.25 to $6.90; wethers, feeders, $4.10 to $4.60; ewes, breeding, one to three years, $4.50 to $5.25; ewes, aged, solid mouths, $4.00 to $4.40; ewes, feeders, $3.15 to $3.75; bucks, fair to choice, $3.25 to $4.00.

In each class there is considerable range in prices according to quality and condition of the offerings or in advancing and declining markets during the day.

EGGS AND POULTRY.

New York Market at Wholesale—All Grades Quoted.

The surplus goes to New York, therefore these figures representing the market there on December 1st will be interesting:

Live Poultry. — Unloaded were twenty-six cars. The market opened firm and with advices of moderate receipts due this week, chickens, fowls and roosters advanced one-half cent. Chickens — Western, 16½c.; fowls, prime, 16½c.; poor, 16c.; old roosters, 11½c.; turkeys, mixed hens and Toms, 20c.; ducks, Western, 16c.; geese, 14c.

Dressed Poultry.—Receipts, 3,644 packages. Trade was very quiet and price changes were of little importance. Fresh-killed turkeys, dry-packed, Western, small boxes, dry-picked, selected, fancy, 25c.; average best, 20 to 22c.; scalded, 23 to 24c.; poor, 16 to 18c.; iced, Western, dry-picked, selected, fancy, 24 to 25c.; average best, 21 to 22c.; fair to good, 19 to 20c.; poor, 16 to 18c.; scalded, selected, 22c.; old hens, 23c.; Toms, 20c.; broilers, dry-packed, twelve to box, milk-fed, fancy, eighteen to twenty-four pounds to dozen, 24½ to 25c.; twenty-five to twenty-nine pounds, 23c.; corn-fed, fancy, eighteen to twenty-four pounds, 22 to 23c.; prime, twenty-five to thirty pounds, 19 to 20c.; chickens, dry-packed, twelve to box, milk-fed, thirty-one to thirty-six pounds to dozen, 18 to 18½c.; thirty-seven to forty-two pounds, 18c.; forty-three to forty-seven pounds, 19c.; forty-eight pounds and over, 20c.; corn-fed, thirty-one to thirty-six pounds, 16c.; thirty-seven to forty-two pounds, 16c.; forty-eight pounds and over, 18c.; broilers, in barrels, Western, milk-fed, one and one-half to two pounds each, 23c.; corn-fed, dry-picked, one and one-half to two pounds, 17c.; scalded, one and one-half to two pounds, 16 to 16½c.; chickens, frying, five to six pounds to pair, Western, milk-fed, average, 16 to 16½c.; corn-fed, 14½c.; scalded, 13 to 13½c.; roasting, four pounds and over each, 17c.; corn-fed, dry-picked, fancy, 17c.; four pounds each, 16c.; scalded, 16c.; fowls, dry-packed, Western, boxes, sixty pounds per dozen, 18½c.; forty-eight to fifty-five pounds, 17c.; forty-three to forty-seven pounds, 16c.; thirty-six to forty-two pounds, 14c.; thirty to thirty-five pounds, 13 to 13½c.; under thirty pounds, 12 to 12½c.; barrels, iced, Western, dry-picked, four pounds each, 16c.; five pounds, 17c.; three and one-half pounds, 13½ to 14c.; three pounds and under, 12½ to 13c.; scalded, 13 to 14½c.; poor and small, 10 to 12c.; old roosters, 2c.; Western spring ducks, choice, 14 to 15c.; average, 12 to 13c.; squabs, prime white, ten pounds to dozen, $4.75; nine pounds, $4.25 to $4.50; eight pounds, $4.00; seven pounds, $3.25; six to six and one-half pounds, $2.75; dark, $1.75.

Eggs.—Receipts, 3,267 cases. The market opened strong in tone and at one time it looked as though prices would go higher. But as trade progressed buyers were taken care of on a basis of 44 to 45c. for extra firsts and at 42 to 43c. for firsts. Western-gathered, white, 40 to 53c.; brown hennery, 48 to 50c.; gathered, brown, mixed colors, 42 to 48c.; fresh-gathered, etras, 46 to 48c.; fresh-gathered extras, 46 to thirds, 28 to 35c.; dirties, No. 1, 25 to 28c.; checks, 23 to 25c.

W. F. SCHADE,

Jackson, Cape Girardeau Co., Mo.

BLOODED STOCK NOTES.

Direct from triumphs at the Chicago International Live Stock Exposition the Shire mares of the richest breeding imported by Trumans' Pioneer Stud Farm will return to the farm at Bushnell, Ill., to be sold at auction on Thursday, December 11th. These include first, second and third-prize and championship winners at State Fairs. There will be thirty-five head offered, and of the best mares of the breed. There are also at Bushnell 125 head of Shire, Percheron, Belgian and Suffolk stallions—a splendid horse show for anyone to visit.

The Kirby Stock Farms of Marmaduke, Ark., are again represented in the advertising columns of this paper. Mr. J. W. Kirby is Manager, and the herd boars are Master Keep On and Likeness Corrector. Mr. Kirby will sell two good brood sows and a few pigs at a bargain.

Attention is invited to the card of Mr. J. E. Weller, of Faucett, Mo., proprietor of the Legal Tender Herd of Duroc-Jersey swine and Shorthorn cattle. Just now he has for sale some September pigs of both sexes; also a number of serviceable boars, weighing 179 to 225 pounds. These boars are lengthy; have heavy bone, and are good individuals, with the best of breeding. Mr. Weller is pricing the smaller ones at $25 and the larger ones at $30, if sold in December. He is offering a fine lot of gilts bred for spring farrow, weighing from 180 to 250 pounds, and priced at $30 to $35. These gilts are bred to fine registered boars and it will be safe to order from Mr. Weller, whose herd is above the average in quality. Prices quoted are good to January 1st.

In addition to his Poland-China hogs advertised in this paper, Mr. A. F. Siefker, of Defiance, Mo., has a fine lot of Plymouth Rock cockerels on sale. He has been fortunate in getting a start from a champion strain, which is doing well on his farm.

Messrs. Cook & Brown, of Lexington, Ky., have headquarters at the Union Stock Yards, which is very convenient for receiving and shipping. Their stock consists of mammoth jacks, Percheron horses, saddle horses, and large English black pigs. They have consolidated their great live stock breeding interests and can show a buyer some of the finest stock in the country.

St. Louis Hay Sales.

On December 1st the following hay sales were made in St. Louis: Clover-mixed—Two cars No. 2 at $15; four cars No. 2 light mixed at $15.50; one car No.1 heavy mixed at $16; two cars No. 1 light mixed at $16.50; two cars do. at $17; one car high No. 1 light mixed at $17.50; one car part light clover-mixed at $17.50 and part timothy at $20. Timothy—One car thrashed at $12; two cars No. 3 at $13; two do. at $13.50; one car No. 2 at $15.50; one do. at $16; one do. at $17; two cars good No. 2 at $17.50, one switched; four cars ordinary No. 1 at $18; one do. at $18.50; one car No. 1 at $19; three No. 1 at $20—choice quotable at $21. Prairie—Two cars No. 2 Nebraska at $14, delivered; one car high No. 1 Nebraska at $16.50; two cars high No. 1 Kansas at $19. Clover—Part car No. 2 at $13.50; one car high No. 1 to choice at $17.50. Alfalfa—Three cars No. 2 at $13; two do. at $13.50; three do. at $14; two cars good No. 2 at $15, one switched; one car do. at $15.50, delivered; one car No. 1 at $16; two do. at $17; one car high No. 1 at $17.50; one do. do. at $18—choice (fine-stemmed and leafy) held at $19.

Mr. J. P. Vissering, of Alton, Ill., writes: "We have been practicing dry farming this year. Result—no corn, but plenty of fall pigs. To move these quickly I have reduced my regular prices until February 1st on these 75 to 100-pound and better fall pigs 25 per cent. Their express charges are light, and their winter keep until pasture comes is small. I also offer choice 200 to 225-pound, stretchy, serviceable boars and bred gilts at regular prices."

Reading For Winter Evenings.

One great objection to farm life on account of the isolation has been largely met by rural delivery. And the season is at hand when, if we would get the full benefit of it, the question of reading matter must be considered.

There are rich inducements for including several subscriptions in one order. Besides the reduced rates which combinations afford, the selection will be made in a much more systematic and economical manner than when one paper is ordered one month and a magazine in another place and of some other firm the next. The balanced ration is sure to be more easily attained.

Of course, there is no necessity of emphasizing the need of a farm paper. The progressive farmer now takes more than one, each specializing along a different line. Whatever your hobby in agricultural subjects may be, there is some publication which will fill it. The one published in your own state will have essentials to you which others may skip. And whatever your aspirations in future side lines of the main crop, some editor will be able to give you many times the subscription price in a year. If your farm paper does not pay, you have either failed to select the proper medium or to make use of it. The farm implement which is never used cannot be blamed for yielding no profit on the investment; and the farm paper is one of your implements, or should be, as surely as the cultivator or mower.

The housewife also needs some good trade matter in the form of a household magazine; and there should be plenty of reading matter for the children. There are now so many well-edited juvenile publications that there can be no excuse for children wasting—yes, more than wasting—their time over trash. You have not the time to oversee and select the reading material for them every time; possibly you feel incompetent to do this. By subscribing to some standard periodical for young pepole, something carefully edited, you are virtually placing before them the best reading without the labor of the personal sifting.

A good religious periodical is among the necessities, a source of constant inspiration to church work, and most of these contain general matter along various lines which is sure to be helpful. If possible, include some literary magazine of acknowleged merit. This need not necessarily be high-priced. While those usually rated as the very best from a literary point of view are somewhat expensive, there are a number of excellent ones within the reach of all. Each covers a slightly different line. Before selecting, make a careful study of all; and, having chosen, it is well to continue with the same one for more than a single year. In this way one gets familiar with their individual ways and methods, and this is a saving of time when reading. You know just where to look for each department. The special features of one may be missed if you transfer your patronage to another. Make up the list carefully, providing a special attraction for each member of the family and selecting for entertainment as well as profit.

Then there are some books which you will need. If near a good circulating library, the membership ticket will prove a good investment. If your own state has a special provision for library privileges, get your neighborhood awakened to the importance of gaining them. A school social may yield funds for the nucleus of a choice collection of books to be used by the patrons. And if you must depend entirely upon your own resources, do not omit some standard works. Some of these may surely be enjoyed by the whole family. Biography and history have special power in the building of character.

Choose some special phase of your own work and read exhaustively regarding it. You will accomplish more in the same time than by a promiscuous gathering of varied materials. Learn the vital points regarding the matter, the main facts, all that one needs to know for a thorough understanding of the subject. After thus finding out all that specialists have found out, you will be much better fitted for going on with the subject yourself.

It may be the subject of renewing worn-out land. We heard one man say recently that he could not longer make his farm pay. Something was wrong. Of course, he knew several things which needed remedying; and he knew in a general way what was needed. But when it came to the specific details he confessed his ignorance. And, said he: "I'm going to send my boy to the agricultural school to find out just what's the matter."

Not every man has a boy to send on such a mission; not everyone can afford it. But everyone can gradually widen out through study until he can afford these things and many others now quite beyond his reach. The national government is annually printing many bulletins for general distribution, which you can obtain for the asking of your home Congressman. Every state is furnishing similar matter for its residents which will help solve vital subjects. Are you making the most of these? And if not, why not? Insect life is more and more demanding our attention. Its relations to bird life bring a problem to our very door to be solved. To succeed best with any crop, one should know its life history, its chemical requirements.

No other life can be so broad as that of the farmer. The whole book of nature is spread out, and its pages daily beckon him to read. The mechanic and professional man are fortunate if they get two weeks in the year for the pleasure which is open to the farmer every day. Ye eyes and ears must be alert or the will miss the best of it. "The more you know of any subject," says a successful teacher, "the better you will like it." The more you know about farming, other people's experiences the latest results in different phases the better you will like it and the more profitable it may become.—Bessie L. Putnam.

Send stamps or coin at once. Don't miss this great offer because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather, or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3350 Vista Ave., St. Louis, Mo.**

Little Tot's Thousand Christmas Gifts.

Mehitable Jenkin Jones—that was her real name. And Mitty or Hitty are not much better. "Such a little tot!" exclaimed her father so often when he looked at her that at last she became known to everyone as Little Tot. Since those baby days when he had looked at her so kindly and called her such a little tot, her father had passed away and there were some hard times in the humble home.

It was when the Christmas season drew near that Tot felt the lack of money most. There was not even a piece bag such as most little girls can find in mother's sewing room and from which they can make such wonderful spectacle wipers for grandpa and such neat iron holders for mother. For in Little Tot's home the pieces had all been used for patching old garments, and then patching them again and again until even the patches needed patching.

One day when Tot was weary from running errands for the milliner around the corner and just a little bit blue because she had no Christmas gifts to give, she looked up from her corner in the store to see a pair of kind eyes and rosy lips smiling down at her.

"That's a beautiful smile. It's like a bit of sunshine," said the owner of the rosy lips.

A light came into Tot's eyes. "It'll be my Christmas gift," she cried. "I'll give one to everybody I love and to everyone that stops here. I'll try to pass them on a bit of sunshine, for sunshine's one of the loveliest things in all the world!"

And so Tot began to give out her Christmas gifts. She gave them to her loved ones; she gave them to people whom she had never seen before and whom she never expected to see again; she gave them to old, tired-looking men and women; she gave them to little children; she gave them wherever she thought they might be desired. The strained, tired look passed from care-worn faces, at least long enough for them to smile back. Tired mothers murmured: "Good bless you, dearie!" Crying children ceased their sobs and sent a misty smile in Tot's direction.

Some hours, when she was not very busy, Tot counted the number of presents she had given. So the day before Christmas, when she came to figure it up, she found that she had given a thousand smiles.

When Tess, the extra errand girl, called out: "Say, Tot, what do you think? I've got twenty-one Christmas presents ready to give. But I can't give mother a thing nor any of my money, either," Tot replied: "And I've already given a thousand Christmas presents and received nearly as many, for nearly every one of the thousand people that I gave a present to gave me one back."

"Why, Tot, you're surely fibbing," cried Tess. "I'd like to see even one of your thousand Christmas presents."

"I was just thinking that it's about time for me to give you yours with love and lots of good wishes," said Tot, flashing upon Tess a radiant smile of love and good-will.

"Do you call that a Christmas present?" asked Tess.

"It's all I've got to give," said Tot. "Mother has to have every penny I can give her and I want to remember other people in some way."

After Tot's mother had exclaimed and laughed and cried over the pair of shoes Tot had given her, she was told about the thousand Christmas gifts.

"Dear heart, what a beautiful thought!" she cried. "How pleased the one gave us Christmas must be!"

It was a couple of weeks later that Mrs. Simpson, the milliner, sent for Tot. Girls had been called to the head lady many times since Christmas and told that they need not come back. This thought pounded against Tot's brain as she hurried to Mrs. Simpson's room.

"Are you the girl that smiles?" asked Mrs. Simpson.

The question was so unexpected that Tot smiled one of her beautiful smiles.

"That answers me," said Mrs. Simpson. "I've been hearing about you from the customers and from the clerks for the last two weeks. Do you know that smile is worth something?"

"Yes, ma'am," answered Tot. "It gave nearly all my Christmas presents—about a thousand. Smiles are all I've got to give."

"Well, you're too valuable for just an errand girl. Miss Peters came to me to know if she could have the 'smily errand girl' for a model to try on hats for customers. Of course, models, good ones, are not as common as hickory nuts, so she'll put you on at ten dollars a week."

Tot could only gasp out a "Thank you," and then she rushed home to tell her mother the story that was more wonderful than any fairy tale she ever heard.—Janet Thomas Van Osdel.

Here's Foot Comfort and Economy For You!

Water-Proof
Snag-Proof

At last! A Thoroughly Practical Metal Sole Shoe, one that is easy on your feet, keeps them warm and dry at all times and allows you to walk with a free, buoyant, natural step. It does away with walking flat-footed. **The bar on the sole gives the foot the natural tilt,** letting the ankle work freely. I will insure you foot comfort you have never enjoyed before and save you money. It has practically no wear-out to it. By all means learn about this shoe. Buying leather sole shoes is a losing proposition when you consider the saving and satisfaction to be had in the

Gives Freedom From Sore Feet

Aluminum Sole Shoe

Outwears Several Leather Pairs

Lightest Metal Sole Shoe Made

The advantages of a metal sole shoe have long been seen, but there has been the drawback of the extra weight. This hindrance we have overcome, as aluminum is the lightest metal in existence and at the same time is extremely durable. The weight of a pair of these shoes is only 4 lbs.

Cut Down Your Shoe Bill

The Aluminum Sole Shoe will stand up under the hardest usage for several years, and will keep its shape. Think of the saving in your footwear. There's no need of buying new shoes every little while when you can get this practically indestructible shoe at a very reasonable price. Better give this a little thought before you buy any more shoes. The Aluminum Sole Shoe comes in all sizes and is provided with 6, 9, 12 and 16-inch tops.

Protect Your Health

Many kinds of sickness result from wet feet. By wearing old, leaky, leather sole shoes you are in constant danger of bringing on rheumatism, neuralgia, catarrh, colds, etc. This shoe will safeguard you under all conditions and keep the feet warm. Wear it in the Winter or Summer, anywhere, you are protected. A hair felt insole makes a soft cushion for the foot, gives added warmth and insures perfect comfort.

Send for Free Booklet "Shoe Talk"

We want you to get this little book. It's shoe sense boiled down. It tells you all about this wonderful work shoe, shows you how to cut your shoe expense, do away with corns, bunions and other soreness, avoid the unpleasantness of run-over heels, warped soles, cracked uppers and the other miseries of poorly made leather sole shoes. It tells you how to make walking a pleasure. Write for it today. **It's Free.**

Racine Aluminum Shoe Co., 101 Sixteenth St. RACINE, WISC.

Wild Horses in Canada.

The Minister of Agriculture for the Province of Alberta has urged upon the Dominion government the necessity of some steps being taken to put a stop to the depredations of wild horses in the Peace river country in Western Alberta and Eastern British Columbia, which has been one of the principal pioneering sections of this part of Canada during the past few years. He states that wild horses have made raids upon the ranches of the new settlers, killing many of the domestic horses and leading away a number of well-bred domestic mares, which have been imported at a considerable cost and which are one of the principal assets of the new settler.

According to Ottawa statistics, these horses are supposed to be descendants of horses abandoned during the gold rush to the Yukon Territory in 1897-98. From the Bow river westward these animals have raided the ranches of the settlers as far west as Kamloops, and the contractors on the Grand Trunk Pacific Railway have as well suffered losses of imported animals used on the construction work of the road.—Vice-Consul General G. C. Woodward, Vancouver, British Columbia.

New Way of Judging Races.

The Scientific American reports that an automatic photographic apparatus for judging races has proved successful in France, and will be used at the next Paris international race meeting. A camera is placed in line with the winning post, and the winning horse, by breaking a thread, releases the electrically-controlled shutter, and a photograph of the finish is taken. A similar device was used at the last Olympic games at Stockholm, but there the photographs were chiefly used as additional evidence in case of a disagreement between the judges.

The National Grange.

At Manchester, N. H., November 18th, Oliver Wilson, of Peoria, Ill., was re-elected Worthy Master of the National Grange. George W. F. Gant, of Mullica Hill, N. J., was elected National Lecturer; and W. H. Vary, Master of the New York Grange, was elected National Overseer.

Other officers elected were: Chaplain, A. P. Reardon, Kansas; Treasurer, Mrs. E. S. McDowell, Massachusetts; Secretary, C. M. Freeman, Ohio; Gatekeeper, C. L. Rice, Minnesota; Ceres; Mrs. Richard Pattee, New Hampshire; Pomona, Mrs. J. C. Ketcham, Michigan; Flora, Mrs. J. A. Peckham, Rhode Island; Lady Assistant Steward, Mrs. P. H. Harland, Idaho.

Top Prices For Cattle.

On Wednesday, November 26th, with 17,000 cattle on sale, the top price at the Chicago market for cattle was $9.50 per 100 pounds, paid for twenty-two yearlings weighing 1,174 pounds average. Prime heavy cattle, the top kind, 1,680 pounds average, sold at $9.00 per 100 pounds.

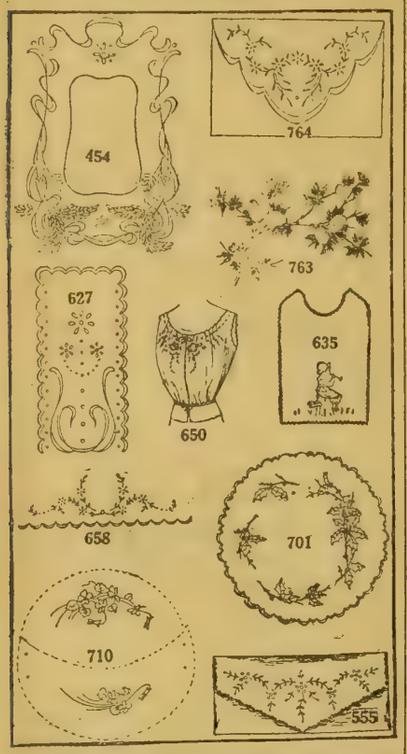
Argentine Corn For Distilling.

It was reported from Peoria, Ill., November 10th that a cargo analysis of Argentine corn by an expert revealed the fact that it must be bought 10 to 12 cents a bushel under the price of American corn for distilling purposes.

EMBROIDERY DESIGNS.

May Manton Service—By Far the Best—Your Choice of Purchasing the Stamped Goods and Materials or the Transfer Pattern Alone.

The May Manton embroidery service consists of two distinct departments. One provides the stamped goods and the materials to work with, and the other department simply furnishes the paper pattern so that it can be transferred by the purchaser to the cloth by pressure of the hot iron. For the goods and materials the special price is stated in each instance, but the transfer patterns always cost 10 cents. In sending orders, please mention the number and the price of each design. We cannot speak too highly of these goods and we can assure our readers of prompt service, the goods and patterns being shipped direct to the customer from the factory. All prices are very reasonable.



SEASONABLE DESIGNS FOR PRESENTS.

No. 555.—Handkerchief Case. Stamped on best white pure linen, with mercerized floss to work. Price, 35 cents.

In ordering designs with stamped goods and materials, please remit the price stated or we will furnish transfer pattern of any design for 10 cents.

HANDKERCHIEF CASE.

No. 764.—A Design For Embroidering a Handkerchief Case in Envelope Shape. The scalloped edges are designed to be padded and buttonholed; the sprays of leaves worked either in solid embroidery or as eyelets; the stems to be outlined, and the round dots in solid work or as eyelets.

Stamped on best white pure linen, mercerized floss to work. Price, 35 cents, or transfer pattern for 10 cents.

TWENTY-TWO-INCH CUSHION.

No. 765.—A Design For Embroidering a Cover For a Pillow or Cushion Twenty-two Inches Square.

The flowers and leaves are designed to be worked in long and short stitch or to be simply outlined. The seed pods are to be worked in solid embroidery, the stems and veins are to be outlined and the stamens worked in French knots.

Tinted in fast colors on tan ticking, 22x22 inches, with green duck back and mercerized floss to work. Price, 40 cents, or transfer pattern for 10 cents.

MAGAZINE OR BOOK COVER.

No. 767.—A Design For Embroidering a Magazine or Book Cover.

The work can all be done in outline stitch, all solidly, all in long and short stitch, or in a combination of outline or solid work with long and short stitch, as the tulips and leaves in long and short stitch and the stems outlined with the circles in solid work.

Stamped and tinted on gray Linene, with mercerized floss to work. Price, 25 cents, or transfer pattern for 10 cents.

WORK-BAG DESIGN.

No. 768.—A Design For Embroidering a Slipper or Work Bag.

The work can be done in solid embroidery, all in outline or in a combination of solid embroidery with outline or of outline with long and short stitches.

Stamped and tinted on tan art ticking, with mercerized floss to work. Price, 40 cents, or transfer pattern for 10 cents.

ATTRACTIVE VEIL CASE.

No. 769.—A Design For Embroidering a Veil Case.

The sprays of the leaves can be worked in solid embroidery or as eyelets; the stems all to be outlined, and the round dots in solid work or as eyelets. The letters can be worked solidly or in outline.

Stamped on best white pure linen, mercerized floss to work. Price, 35 cents, or transfer pattern for 10 cents.

Please address all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Fire Prevention.

The observance of Fire Prevention Day in many of the states brought forth some interesting statistics. From them we learn that the cost of fires each year in the United States is one-half that of all the new buildings erected throughout the year. The annual per capita fire waste in this country is $2.51, while in Europe it is 35 cents. Fire losses in the United States amount to $225,000,000 annually. The 90,000,000 people in this country use more matches than all the 900,000,000 in the rest of the world. More than 1,500 people are killed and 5,000 are injured annually as a result of fire. The fire loss in the United States for 1910 was greater than the annual expenditure for pensions or the annual cost of operating the postal service. If all the buildings burned last year were placed together on both sides of the street, an avenue of desolation would be made extending from Indianapolis to Key West.

Undoubtedly many of the fires are due to carelessness, such as the placing of a lantern in a position where the O'Leary cow could kick it over and thus start the burning of a great city. In the rural districts of Michigan, out of eighty-two fires twenty-three were due to defective chimneys. Because of lack of facilities for fighting fire in the out-of-town districts, several pails of water should be kept about the outbuildings and on each floor of the house. This is especially important in winter, when there is a possibility that the water supply may be frozen at the most urgent moment. The water will not freeze at temperatures above zero if a little more than two pounds of fused calcium chloride is added to each pail of water.—Janet Thomas Van Osdel.

Service and Style in Gloves.

Farmers and stockmen have always been particular about having serviceable and stylish boots, hats and gloves, particularly gloves. There is an elegance that belongs to the glove that is always satisfying to the rider or the driver who constantly wears gloves. O. C. Hansen Mfg. Co. are responsible for some of this pride in gloves because they make first for service but always for style. The Hansen gloves will not crack or peel, stiffen or harden. They are good for motoring, riding and driving, all styles, to suit all occasions. Write to O. C. Hansen Mfg. Co., 132 Detroit street, Milwaukee, Wis., and ask for Hansen's Glove Book. It will tell you where to buy Hansen gloves and a list and illustrations of all the styles.

Manure spreaders, tongueless disc harrows and cultivators are advertised by the American Harrow Company on page 2.

The Giving Season.

A frequent question asked of children during the weeks preceding Christmas is, "What do you want for Christmas?" or "What shall we tell Santa Claus to bring you?" Consequently most children are placing far greater emphasis upon what they wish and expect to receive than upon what they expect to give. Christmas must be an unselfish time if the true Christmas spirit prevail. A help toward filling the little ones with this spirit lies in changing the question from "What are you going to get?" to "What are you going to give?" And the giving thought should include not only father, mother and other dear ones, but little children and old people who have no host of affectionate relatives to shower gifts upon them and who can give nothing in return. Such can be found in the homes for orphans, for crippled children, for defective children and for the aged; in the tenements of large cities and perhaps in some unfortunate homes in the very neighborhood.

The giving of shabby or cast-aside toys or garments does not show the true Christmas spirit. Such things may be disposed of at other times, but at Christmas the best is asked of us. It may do no harm to the recipient to accept cast-off things, but it will harm the giver unless it is the best he can do. It is the season of the year to emulate the Founder of Christmas—the Great Giver who gave His only and dearly-beloved son to a needy world.—Janet Thomas Van Osdel.

Farmers' Shoe Talk.

A good understanding is appreciated by all, and the farmers especially. For he has to be on his feet, in all kinds of weather and all character of soil. He walks on the pavements, in the road, on the sod, in the plowed field, in the barn-yard, and his ordinary work calls him into all the ways and byways of a country life.

He protects his health by good, dry shoes. Unless made of the right kind of material and in the right kind of shape, they are failures. There is a principle about the shoe for its ease. Very few men or women who have not suffered from a bad shoe. They may have paid a big price for them, but that does not always insure ease in walking. If it did, there would be far less corns to cause suffering. About every third person will admit that he has corns and every corn is made by a faulty shoe. It is not only a displeasure, but it is a positive injury to have your foot pinched with a bad fitting shoe.

Have you ever heard of the Aluminum sole shoe? It is a progressive shoe. It is a step in the right direction. It not only saves in cost because of its durability, but also in peace of mind because it protects your feet and gives you the natural flexibility required to give the foot perfect ease. No more half soling. No more wet feet. No more corns. No more pain in the feet and much less cost in the price. Look up the advertisement in this issue of the farmer's and working man's friendly shoe on page 23. It will greet you and prove to you its extra quality. It is advertised by Racine Aluminum Shoe Co., 101 Sixteenth street, Racine, Wis. They are all the go. Write them, mentioning The National Farmer and Stock Grower, for their little booklet illustrated and telling you of the great advantage and benefit of this shoe. —Advt.

Little Folks' Dress.

In those homes where strict economy must be observed, and there are several children to dress, the mother cannot afford to buy everything new for them; therefore she must learn to cut down and make over old garments; and there is no more praiseworthy economy. The first thing in order to keep children comfortable in school or out of school is to provide them with warm, comfortable underwear, and all of their underwear can be made from old material. When they wear Union suits, the pants wear out long before the waists, and a good way to renew them is to put a band, plenty large, of unbleached muslin around the bottom of the waist, then buy the ready-made pants only, stitch them onto the muslin band neatly and you have a nice Union suit again. Their school clothes should be as neat and pretty as your means will allow, for we should remember that to the economical mother it may be a trifle for the little girl to wear a faded or outgrown garment, but to a child it is a real affliction, and there are so many ways of economizing in children's clothing that they may be comfortably and nicely dressed and yet not have anything really new, unless it is good, stout shoes. The children should be carefully fitted in shoes, as shoes too small or too large for a growing child are apt to cause trouble with the feet, that will follow it through life, and their shoes should be kept soft by rubbing frequently with a little vaseline on a soft cloth. Their stockings should be changed twice as often in warm weather, as the perspiration absorbed by the thick hose produces a cold, clammy and disagreeable feeling; and if the feet are not comfortable, the whole body seems out of order.

All of their underwear and stockings can be made from old ones of a larger size, and in cutting children's garments from those of adults', have the sleeves and the legs of pants a good length, as the wrists and ankles are very susceptible to cold and should be well protected.

Children's underwear should be kept as soft as posible, and their stockings and flannels can be kept soft as long as they last by washing through suds made with borax soap chips, but the chips should be dissolved in hot water first and enough of this solution stirred in the warm, soft water to make a nice lather before putting in the garments. There is nothing better than warm suds made with the Twenty-mule Team Soap Chips for washing the fine, soft flannels worn by young children, and baby sacques and caps and sweaters of any color can be kept soft by washing through this suds; but to keep all such articles in good shape they must be kept pulled into shape while washing, drying and pressing. —A. M. H.

New Apple Cross.

It is reported that after years of tedious experiments, Prof. Paul Evans, Director of the Missouri Fruit Experiment Station at Mountain Grove, believes that his success in crossing the Ben Davis with the Jonathan apple will merit the award of the Wilder medal by the American Pomological Society.

The crossing of the two apples is expected to prove of great value to the orchardists of the Ozark country. The occasional failures of the apple crop in the Ozarks have been blamed not alone on weather conditions, but on the fact that few of the big producing varieties are hardy enough to withstand severe winter weather. It was with the view of giving to the Ozark country an apple that could withstand the cold of a severe winter that Prof. Evans set to work. The first step was taken when the trees were in blossom. The Ben Davis stamen was joined to the Jonathan petal. The feat had been regarded as impossible, but the cross-bred trees have produced fruit that has convinced Prof. Evans that his experiments have met with success.

Fixing the Blame.

"Auntie, when you were a young girl, were you very pretty?"

"Yes, my child, very pretty."

"Were you popular?"

"Oh, yes, very popular. I was the belle of the neighborhood."

"Didn't any young man ever come to call on you?"

"Oh, yes, my dear. Lots of them."

"Then, auntie, why is it that you never married?"

"Nobody ever proposed to me, my dear."

"Why not?"

"I don't know, but I've often thought it must have been the high cost of living that scared the young men off in those days."—Detroit Free Press.

If I Ate That I Would Die

You Will Never Fear Food If You Go to a Dinner Carrying One Little Stuart's Dyspepsia Tablet.

You needn't pass up all those savory dishes just because you are afraid of what the stomach will say to them. Armed with a box of Stuart's Dyspepsia Tablets you can bid defiance to the most cantankerous stomach and be assured that your food will be perfectly digested in spite of the stomach's objections.

"At Every Banquet You Will Always See Some Person Who Is Afraid of Food."

Stuart's Dyspepsia Tablets are a compound of pepsin, and those elements that must be secreted by the stomach if the food is to be digested. When the stomach fails to secrete enough of these digestive agencies, the only sane remedy is to supply a sufficient quantity of these elements to digest the food. This is the service for which Stuart's Dyspepsia Tablets were made and they are recommended by leading doctors and scientists. One or two of these tablets is sufficient to digest the largest dinner. They stop almost instantly all forms of indigestion, such as sour stomach, belching, heartburn, dizziness, brash and dysentery. Stuart's Dyspepsia Tablets contain digestive elements, a single grain of which is capable of digesting 3,000 grains of food, such as meats, eggs, grains, vegetables, starches and mineral matters of all kinds.

If your stomach is sluggish or worn out, let Stuart's Dyspepsia Tablets do your digesting for you until the stomach can recuperate. Give it a little vacation. It has a hard enough struggle at the best, with all you put in it. And even when your stomach is in perfect condition, you will occasionally need one after a big banquet or other social affair that taxes your stomach to the uttermost.

Make Stuart's Dyspepsia Tablets the ever-ready friend and assistant to your stomach. Get a 50c. box of your druggist today.

Closet Substitutes.

One of the great deficiencies in the old-fashioned farm house is the lack of closet room. Those who can neither afford to remodel so as to supply the need nor to buy the expensive wardrobe, can still find several substitutes which answer the purpose fairly well.

If you have even one good-sized closet, this can be made to serve the entire family, if it only happens to open into the hall, providing a different arrangement is made. Instead of the hooks which have served to hang the clothing upon, fasten a long rod so that it will project a few inches from the wall. Then provide coat and skirt hangers for each garment or suit. These can be obtained at five cents apiece or two for five at any of the five and ten-cent stores. And you can arrange the clothing in at least a quarter of the space which it previously occupied; each garment will be kept in shape, and you can easily get any one thing wanted without necessarily removing something else first. All are as neatly and compactly arranged as the coats or suits of the merchant, and in precisely the same way. The outlay at first may seem unwarranted, but it is cheap in the end.

For the little folks, a large packing box may be procured of the neighboring merchant for a trifle, having first sandpapered it smooth and then finished with paint or varnish. This will hold all of their garments, when each is fitted over a hanger. Boxes for shoes and rubbers and bags for the other accessories may find place on the sides. Finish the outside with sandpaper and varnish, paint or stain, first filling in any cracks or nail holes with prepared crack filler or sawdust and paste. If the top of the box has been saved, it may serve as a door; or a neat curtain will serve to keep much of the dust from the clothing. —Bessie L. Putnam.

Christmas Gifts.

Whatever you give, do not let it be a burden. The trifle from a willing heart is better than an expensive gift made grudgingly or with the feeling that it cannot be afforded; and yet it must be done, because the one to whom it goes made you a nice present last year. The Christmas giving, which is merely a barter, a "swapping" by guess, with the chances that both parties get something which they do not need, puts the matter too much on the same plane with the "grab bag." The plain, neat card with best wishes is really much more in taste.

While the tendency towards miscellaneous giving is being more and more discouraged, there are always a few of the most intimate friends to whom it is a real pleasure to give some material remembrance. I wonder how many of the farmers' wives and daughters who are now conjuring their brains to know what to send to the city cousins realize that the most acceptable things which they could supply are right at hand.

A plump chicken or duck, a basket of hand-picked apples, rosy-cheeked and of a quality which the city vender declares fancy, a dozen or two of eggs innocent of cold storage, a section of honey, or a small pail filled with home-made sausage or lard—these are among the suggestions which may appeal. A quart of popcorn will please the little folks, for the freshly-popped product is always better than any which the store offers.

If you prefer to do fancy work, one clever woman finds it better to confine her attention to a single article during the year. Thus, last year she gave pillows, and now she is meditating whether it be embroidered towels or crochet bags. She affirms that when she has once "got her hand in" to a certain line of work she can do it faster and better. Besides, getting the material in bulk is some advantage.

Her daughter is busy making pin cushions and needle books, the former being so small as to be convenient for the shopping bag or work basket. They are made by cutting two circles of pasteboard from one and one-half to two inches in diameter and fitting over one side of each a piece of dainty silk or linen. Overhand the two together. With mercerized thread of the same color or a pleasing contrast, crochet a cover for each side, done by commencing with a chain of three stitches and gradually widening to make a flat circle, in single crochet or trebles, until the piece is large enough to cover the pasteboard circles. Catch upon one side of this with thread of the same color. Finish the other side in the same way. Stick pins at equal distances along the outer edge.

The needle book is made of a rose in Irish crochet, directions for making the medallion being familiar to all who do crochet work. The petals are in sixes, and four or five rows of them should be made. Cut foundation circles of flannel, buttonhole the edges, place between these two or three extra leaves of the flannel circles and tie with a small bit of ribbon. Upon the outside of the two outer leaves the rose pieces are neatly fastened. These cost very little cash outlay, as a five-cent spool of the silkoton will make several, and the bits of flannel or silk are so small that they are readily picked up about the house. Yet the convenience of these little articles is sure to render them popular. And if you are gathering up pieces for the Church Fair, do not forget them. It is the utility things which sell for a trifle that are most popular with buyers.

But whatever you do or don't do, remember not to work so persistently as to injure the eyes or shatter the nerves. The Christmas gifts which can be easily afforded, made at odd times, and thus not interfere really with any duty, are the ones which should alone be considered. Let them be as practical or as beautiful as possible, but never in any sense a burden to the giver or of such a nature as to place the receiver under a bond of obligation.—Bessie L. Putnam.

Three Fine Golden Locks Dolls.

One Big Doll and Two Smaller Dolls, Beautifully Lithographed in Five Colors on Heavy Cloth —All Ready to Cut Out, Sew Up and Stuff.

The Big Doll, "GOLDEN LOCKS," is twenty-seven inches tall; so large that baby's own clothes will fit it. A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear a Truss Any Longer.

After Thirty Years' Experience I Have Produced An Appliance for Men, Women and Children That Actually Cures Rupture.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on Rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try myAppliance or not.

The above is C. E. Brooks, inventor of the Appliance, who cured himself and who is now giving others the benefits of his experience. If ruptured, write him today, at Marshall, Mich.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir:—

Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunate who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am, Yours very sincerely,

JAMES A. BRITTON.
80 Spring St., Bethlehem, Pa.

Confederate Veteran Cured

Commerce, Ga., R. F. D. No. 11.
Mr. C. E. Brooks.

Dear Sir:—I am glad to tell you that I am now sound and well and can plough or do any heavy work. I can say your Appliance has effected a permanent cure. Before getting your Appliance I was in a terrible condition and had given up all hope of ever being any better. If it hadn't been for your Appliance I would never have been cured. I am sixty-eight years old and served three years in Eckle's Artillery, Oglethorpe Co. I hope God will reward you for the good you are doing for suffering humanity.

Yours sincerely,
H. D. BANKS.

Others Failed But the Appliance Cured

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir:—

Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully,

WM. PATTERSON,
No. 717 S. Main St., Akron, O.

Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Mich.

Dear Sir:—

I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
High Point, N. C. SAM A. HOOVER.

Child Cured In Four Months

21 Jansen St., Dubuque, Iowa.
Mr. C. E. Brooks, Marshall, Mich.

Dear Sir:—The baby's rupture is altogether cured, thanks to your Appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks.

Yours very truly,
ANDREW EGGENBERGER.

Ten Reasons Why You Should Send For Brooks Rupture Appliance

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Remember

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Free Information Coupon

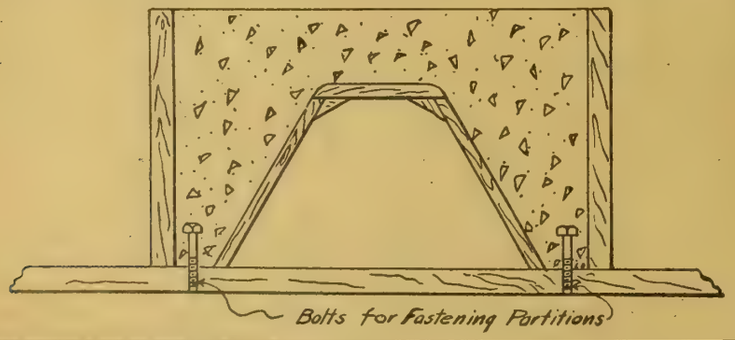
USEFUL AND PERMANENT.

Durable and Sanitary Feeding Troughs of Concrete.

A simple, sanitary and economical use of concrete is shown in the accompanying picture of a feeding trough for hogs. Nothing could be easier than to make troughs of this character for swine or poultry. Old lumber free from splits and knot-holes may be used. To procure an everlasting receptacle of this character simply means the nailing together of two boards in the shape of an inverted V. These are placed in a board platform or other even surface and surrounded with a board frame or form, which is then filled with concrete. The concrete is struck off while fresh to insure an even bottom. No special finish is required and very rude work will answer the purpose. The dimensions of the trough will, of course, depend upon the length and size of the board forms. Small troughs for chickens or large troughs for hogs may be made with equal facility.

Concrete Feeding Troughs For Hogs and Poultry.

Another simple method of making a small trough is to substitute for boards half of a drain tile or terra cotta pipe for the inside form. Where the boards are used it would be well to oil the surface coming in contact with the concrete. This makes the removal of the forms easy. A mixture of one part Portland cement, two parts sand and four parts crushed stone or gravel will make a concrete suitable for this purpose.



Bolts for Fastening Partitions

To prevent hogs from crowding or getting into the trough, cross pieces should be used as shown. To provide for bolting the cross pieces, holes should be bored in the platform at required intervals and the bolts set in with the thread end down. The bolts should go into the platform to a depth that will insure sufficient projection for the strap iron cross pieces and the nut. The concrete should be a "sloppy wet" mix and thoroughly puddled in the form. It should be kept in the form several days and protected from the hot sun and wind. When sufficiently hard on the exposed surface to resist indentation with the thumb-nail, the forms may be removed. The concrete should then be sprinkled twice a day for the period of a week.

The strength of a trough of this character will increase with age. It may be easily cleaned and will resist the hardest usage. The longer it is exposed to the weather the more durable it will become.

The Fur Trade.

At St. Louis the fur market is active in several ways, receiving, buying, selling, shipping and changing in values. Different values are set upon furs from Southern, Central and Northern districts, because of the difference in the quality of the furs. The right way for shippers to do is to send in to the fur receivers and receive quotations for the furs they have. On page 13 advertisements of fur dealers will be found, and some of them have been in business for many years. At present (December 1st) they are all contending against warm, sultry weather, which is unfavorable. These conditions may improve at any time.

Our readers will do well to read the advertisements of the incubator and brooder manufacturers advertised on page 19. The commercial success of the poultry business depends upon the incubator.

Some of the great and good friends of the farmer are giving evidence of their friendship in efforts to reduce the price of farm products.

FOUR BEAUTIFUL FERNS

To be Obtained as Subscription Premium in Connection With either Our NATIONAL FARMER AND STOCK GROWER, a Splendid Monthly Farm Paper, or With Our Monthly UNIVERSAL MAGAZINE, a Gem of a Story and Literary Publication.

NOW IS THE ACCEPTED TIME.

We wish to deliver WITHOUT COST to your door in good, healthy growing condition a valuable assortment of beautiful ferns. We have secured them from fern growers who boast of the fact that their plants are entirely free from all injurious insects or disease which destroy foliage plants of this type, and are assured each individual plant is one of the finest ever produced. There is nothing that will add more cheer to the home through long, dark winter months than a few well-chosen house decorative plants, and those we offer comprised the very best varieties in cultivation, and of a size and quality that will quickly develop into beautiful specimens. We give below a description of each variety:

ROOSEVELT FERN.—This fern is a new variety recently introduced and one of the finest for house decorative purposes grown. It is of compact, vigorous-growing habit, producing in great numbers wide, massive fronds of good length, beautifully tapered from base to tip, that droop gracefully over the pot, hiding it completely from view. The pinnae or leaves of this fern are distinctly undulated, giving the whole plant an attractive, wavy appearance, which adds materially to its beauty. Without an exception, ROOSEVELT has proved the strongest-growing variety ever produced and withstands better than any other variety unfavorable growing conditions of indoor culture found in the average home. A small plant requires but little care to quickly develop into a finished specimen of rare beauty.

BOSTON FERN.—This fern is one of the oldest and best known varieties grown, and in the long years of its cultivation has proven well worthy of a place in every home. It is known by some as the "Fountain Fern," which name it derived from its graceful drooping habit of growth, and until the recent production of the ROOSEVELT Fern was acknowledged the finest of its type. It is a very rapid grower, producing fronds of unusual length, frequently measuring from six to eight feet, and its freedom of growth without special care has made it popular with all who admire beautiful house plants.

THE ROOSEVELT FERN.

WHITMANI FERN.—This charming creation caused a real sensation among lovers of plants, each frond being as delicately and finely cut as the most perfect Ostrich Plume, by which name it is commonly known. It is a very vigorous grower, constantly unfolding new fronds of fine, feathery foliage, entirely distinct from any other variety, and which quickly grows to a width of from ten to twelve inches. The foliage is of good, substantial texture that withstands the abuse to which house plants are subjected, and so compact that each frond appears as one massive Ostrich Plume. WHITMANI is one of the few feathery foliage ferns with which everyone can succeed in growing to finished specimen plants under the average unfavorable growing conditions of the house.

ASPARAGUS PLUMOSUS.—A plant for all purposes, rapidly adapting itself to any conditions. Its rapid, sturdy growth, combined with its exquisite, lacy foliage makes it a plant of such airy grace and value as to be desired by everyone. The bright, rich, green fronds are as fine and delicate as the most beautiful lace, by reason of which it is given the name "Lace Fern."

OUR SUBSCRIPTION PROPOSITIONS.

We publish two papers. No. 1 is the monthly NATIONAL FARMER AND STOCK GROWER, the best farm publication in the United States. It furnishes good, instructive reading that will help farmers, stockmen, poultrymen, dairymen, fruit and vegetable growers in any state. The price is 50 cents a year, and anyone who will send us 50 cents to pay for one-year's subscription can select a set of ferns as a free premium, and we will send them fresh from the fernery, safe delivery in good order guaranteed.

Our second publication is the UNIVERSAL MAGAZINE, a bright, little publication of thirty-two pages, four columns to the page. It contains good stories, poetry, fashions, embroideries, illustrations, and is well worth the price, which is 25 cents a year. Anyone who will send us 50 cents to pay for the UNIVERSAL MAGAZINE for two years can select our set of ferns as advertised, and we will send them at once as a premium, safe delivery and good condition guaranteed. Time is flying. Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MAY MANTON PATTERNS.

This is the best pattern service, and we re very much pleased to obtain it for our iends and patrons. Every pattern is new nd original. In this edition we present for onsideration very seasonable patterns bsolutely up-to-date, with directions for rdering.

LADIES' CUSTUMES.

No. 8057.—Fancy Blouse. 34 to 44 bust. Vith high or low neck, short or long leeves, with or without peplum.

No. 8048.—Fancy Blouse. 34 to 42 bust. Vith low or high neck, with or without ndersleeves.

No. 8061.—Draped Evening Coat For lisses and Small Women. Sixteen and ighteen years.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Artist and the Bull.

The artist Whistler was once walking through a field, when suddenly he found that a huge bull was making straight toward him. He ran as he had never ran before. When he reached the other side of the fence he saw a farmer, the owner of the field, coolly watching the proceedings. Mr. Whistler was furious, and shaking his fist at the farmer, said: "What do you mean, sir, by letting a savage bull like that roam at large? Do you know who I am, sir? I'm Whistler." "Are you?" replied the farmer. "Then what's the good of telling me? Why didn't you tell the bull?"—London Evening Standard.

A Fence Catalogue.

Kitselman Brothers, fence manufacturers, of Muncie, Indiana, have just completed their large catalogue of fencing. Their prices are extremely low when you consider the high quality of their fencing. Prices range from 11½ cents a rod up. See their ad. in this issue and write them for free catalogue. Address, Kitselman Brothers, Box 261, Muncie, Indiana.

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

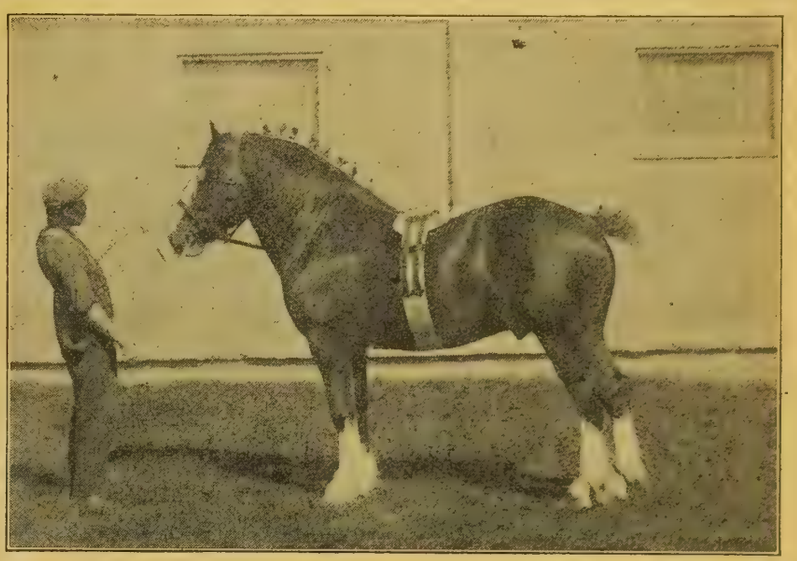
DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

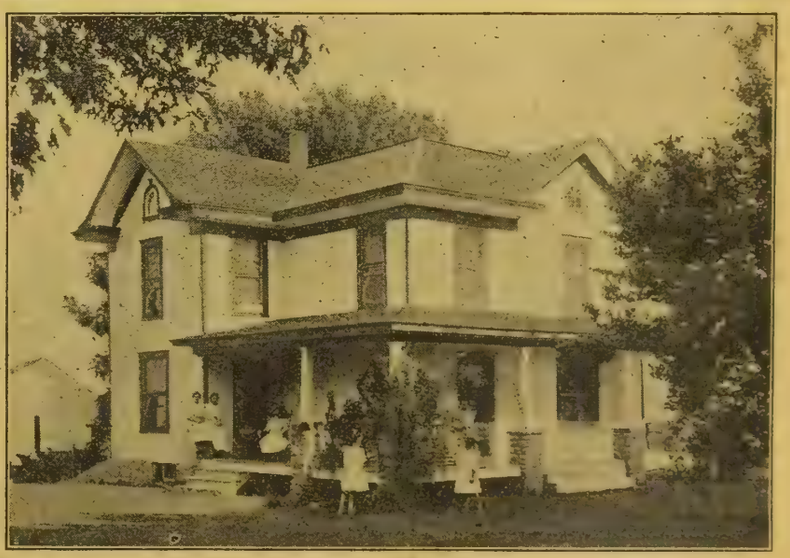
ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

THE McLAIN ORTHOPEDIC SANITARIUM

916 Aubert Avenue **ST. LOUIS, MO.**



CHAMPION CLYDESDALE STALLION—Picture taken at Wisconsin in 1912, where he was champion. The Clydesdale is the famous draft horse breed of Scotland, and this is one of the best representatives of the breed.



MODERN FARM HOME OF MR. AND MRS. C. A. WINFREY, R. F. D. BUCKNER, MO. The house contains ten rooms and bath and has a wide porch on front and side. The house is heated by hot-water furnace, has hot and cold running water on both floors, and is lighted by acetylene gas. Mr. Winfrey is Secretary of the Jackson County Bureau of Agriculture, and owns 460 acres of land, which is three miles from Buckner.

Just See Your Pimples Flee

After You Have Used Stuart's Calcium Wafers and Rid Your Blood of All Its Impurities.

The abolishing of all skin disorders must begin with the blood. Lotions, salves, cosmetics, etc., will do no material good. The trouble comes from within and there the remedy must be applied.

If you really desire quick action and at the same time a common sense, natural, harmless blood purifier, then Stuart's Calcium Wafers is this remedy.

"After Using Stuart's Calcium Wafers My Pimples Went Away Like Magic."

The correct and best blood purifier known to science is—Calcium Sulphide. This great cleanser is contained in proper quantities in Stuart's Calcium Wafers and that is why all blood troubles and skin blemishes rapidly disappear after their use.

An unsightful and pimply face due to impure blood is one of the most disgusting sights one can see and yet all about us, upon the streets, in the theatre, when traveling, etc., we see these horrible results.

There is no need for this condition if you will take Stuart's Calcium Wafers daily and keep all salves, lotions, cosmetics and other harmful preparations from clogging the pores.

Every first-class druggist in this country carries Stuart's Calcium Wafers, which are pleasant to take, harmless, and may be obtained for 50 cents a box.

Home Canning Information.

Very few people in the United States are aware of the fact that we have labor-saving machinery in the shape of small portable canning outfits which are so constructed that the average home can use them successfully and economically as is possible with the large factory machinery. The expense is very little and the housewife can put up enough vegetables in a half day to more than pay for the outfit. The work may be done either in the kitchen or out of doors. The home-made outfits are, of course, available with little or no expense. We herewith submit a brief statement with reference to various kinds of outfits used in the home canning work.

Kinds of Outfits.

There are five kinds of canning outfits in general and practical use as portable home canners:

1. The home-made outfits, which are made from wash boilers, new garbage cans, galvanized buckets, wash tubs, etc. They must all have a perforated false bottom with lifting handles and a close-fitting top, with muslin between the container and cover to help seal it. A brick for a weight upon the covers will be of value.

2. The hot-water-bath commercial outfits constructed for efficiency and economy in the matter of time in handling. Many of them are made with the express purpose of doing all the canning work out of doors. Cobs, wood and charcoal may be used as fuel. This outfit may be had for from $4.00 to $16, according to size.

3. The water-seal or semi-process. This kind of a canner provides for a higher pressure and thus reduces the amount of time required for sterilization. It has three tin jackets outside the steam chest; two in the boiler itself and one with the cover, which is sealed in the column of water between the two permanent jackets. This outfit, standard size, costs $10.

4. The all-steam-pressure outfit is a type of canner where the process of sterilization is done in a steam chest in live steam instead of boiling water. This outfit, standard size, may be had for $10.

6. The pressure cooker is constructed on the same general principle as the all-steam-pressure outfits, except that it is made entirely of aluminum; therefore it is lighter and more rapid in its work. The price of this outfit, family size, is $14.

Kinds of Containers.

Anyone with ordinary intelligence, by employing the cold-pack method, may can any fruit or vegetable successfully with any one of the five above-named outfits, putting the product in any kind of container ever employed successfully in other methods. This includes glass-top containers, Mason jars, Lightning Sure Seal, Economy jars, and tin cans. The same precaution with reference to protecting glass against breakage exercised in the former methods are essential in the cold-pack method; that is, take the glass from hot water, fill with the cold product and pour over it the hot water. It is then ready for the sterilizer without danger of breakage.

The all-steam-pressure canner, like the presure cooker, is available for use not only during the canning season, but may be employed throughout the year for cooking meats, cereals, vegetables, etc.

Any of the above outfits, with the cold-pack method, will make possible twice as much work in a given time, about half the labor and greater efficiency than the other common home method known as the open-kettle, hot-pack method. — G. V. Benson.

To Yellow Lace.

"Secure from your druggist five cents' worth of ochre powder. Have the lace well shaken out and put it loosely into a box with the ochre. Fasten on the cover and shake the box thoroughly for two or three minutes, remove the lace from the box and brush out the loose powder until the color is even.

"The amount of ochre required depends on the amount of lace to be colored and the depth of color desired. One even teaspoonful will color a medium-sized lace collar, while one or two teaspoonfuls will be needed for a large piece of lace. Mull embroideries and other sheer materials may be colored in the same way."—Charlotte E. Carpenter, Colorado Agricultural College.

Violet Glass.

"It is not uncommon to find glass that originally was colorless to become of a pink or violet tint after being exposed to direct sunlight for a number of months. This has been noticed in the case of cheap and common glass articles, such as kerosene lamps, tumblers, goblets, fancy dishes, bottles, insulators and the like. It has also been noticed in sidewalk lights, skylights and store fronts. As far as is known, the color is developed by the action of direct sunlight on a compound of metal manganese contained in the glass. When first made, the glass is quite colorless, even in looking through the edge. New articles of colorless glass have been purposely exposed to sunlight for several years, and the violet color has always developed only in the glass which on analysis was found to contain manganese. The color appears deepest on looking through the edge on account of the great thickness of glass between the eye and the light. The longer the sun acts on the glass the deeper the tint becomes until practically all of the manganese in the glass has been changed to a colored substance. The change is supposed to be due to the action of the ultraviolet rays given off by the sun. If a housekeeper objects to her common glassware becoming of a pink or violet tint, she has only to keep it out of direct sunlight. If the glass articles stand in the sunlight day after day, the appearance of the color is to be expected, especially out of doors. Genuine cut glass does not become colored in sunlight." —C. E. Vail, Colorado Agricultural College.

Where the Money Was.

"If yer don't tell me where yer father keeps his money," growled the tramp, who had got in from the street, "I'll knock yer 'ead orf yer shoulders and arfter that I'll eat yer!"

"No, please don't do that, sir," whimpered Georgie. "You'll find all the money we've got in an old vest in the kitchen."

Two minutes later a bruised and battered wreck was heaved through the back door of little Georgie's dwelling place and sat for a while in the gutter and blinked.

Georgie had neglected to say that his father was wearing that old vest. —New York Globe.

Pretty Good.

"You say you met the defendant on a street car and that he had been drinking and gambling?" said the attorney for the defense during the cross-examination.

"Yes," replied the witness.

"Did you see him take a drink?"

"No."

"Did you see him gambling?"

"No."

"Then how do you know," demanded the attorney, "that the defendant had been drinking and gambling?"

"Well," explained the witness, "he gave the conductor a blue chip for his car fare and told him to keep the change."—Lippincott's.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen

Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

More Vital Energy For You

MAGNETIC SHIELDS fill the system with **MAGNETIC FORCE,** which does what all the medicine on earth cannot do. It gives life, energy and tone to the blood and nerves, **MAKING THE BLOOD CIRCULATE VIGOROUSLY,** overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases, but in multitudes of cases, where people say they have been cured of Paralysis, Rheumatism, Lung Trouble, Kidney, Liver, Stomach and Bowel Troubles, Nervousness and most every other form of disease after medicine failed.

Our **MAGNETIC ABDOMINAL AND KIDNEY VITALIZER** for ladies and gentlemen, here illustrated, is only one of the many shields we make. **IT IS A WONDERFUL INVENTION,** scientifically constructed, and floods the system with magnetism, supplying **LIFE, STRENGTH and VIGOR,** to the **BACK, KIDNEYS, STOMACH, LIVER, BOWELS and BLADDER,** giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply. Your health depends upon a good circulation.

Fill Your System With This Magnetism

Write today for full information and free book, **"PLAIN ROAD TO HEALTH,"** by C. I. Thacher, M. D. Describe your case fully, we advise you free how to apply **MAGNETISM** for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 515, 110 South Wabash Avenue, Chicago, Ill.

SELECTED POETRY.

IT CANNOT BE.

It cannot be that He who made
The wondrous world of our delight,
Designed that all its charms should fade
And pass forever from our sight;
That all shall wither and decay,
And know on earth no life but this,
With only one finite survey
Of all its beauty and its bliss.

It cannot be that all these years
Of toil and care and grief we live
Shall find no recompense but tears,
No sweet return that earth can give;
That all that leads us to aspire,
And struggle onward to achieve,
And every unattained desire
Were given only to deceive.

It cannot be that, after all
The mighty conquests of the mind,
Our thoughts shall pass beyond recall
And leave no record here behind;
That all our dreams of love and fame,
And hopes that time has swept away—
All that enthralled this mortal frame—
Shall not return some other day.

It cannot be that all the ties
Of kindred souls and loving hearts
Are broken, when this body dies,
And the immortal mind departs;
That no serener light shall break
At last upon our mortal eyes,
To guide us as our footsteps make
The pilgrimage to Paradise.
—David Hanks Sickels.

THE MAN LAW AT CAPE RACE.

When the first pathetic father
Fell before the tiger wild,
Last and anguished his beseeching,
"Save the woman and the child!"

Down the ranges of the ages,
Sometimes stupid, always blind,
This desiring, this aspiring,
Stirs the soul of all mankind.

May have used this woman illy,
May have failed to "understand,"
But when worlds crumbled 'neath her,
Never failed to take her hand.

May have failed in wild neurotics,
May in sympathy have trick't;
But when Death demanded tribute,
Has she found him derelict?

Lacerate him; oh, indict him;
Great his sin and great his crime;
But in all the great upsumming
Count his courage most sublime.

Puny, pale and puling creature
Would be conqueror of the tide.
Helpless as the blinking infant
For whose sake he gladly died.

Hope for self or hope for future?
Nay, nor hope for Kingdom come—
"Save the woman, save the children!"
That's His answer to The Sum.

That's the man law, that's the life law;
That's the law that moves the sphere;
"Women first, and then the children;"
Then let man die without fear.

Yes, indict him; yes, impale him;
Call him "Savage," "Monster," "Brute!"
But whatever names ye call him,
We must know him by his fruit.

From the sunlit shades of Eden
To the seas of cold Cape Race,
What has been man's dearest issue
As he met Death face to face?

Has it been of self or selfness?
Has it been of his own life,
Or of power, or of greatness,
Or of mother, child and wife?

Finer feelings, nobler instincts,
"Women must preserve the race;"
But when Death demands the woman,
Who but man shall take her place?

"Votes for women," "Votes for women,"
"Man laws smother, crush, debase."
"Lives for women," "Lives for women,"
Was the man law at Cape Race.

Yes, the man law, which is God law,
And the law of Nature wild,
From the very first beginning—
"Save the woman and the child!"
—J. S. Sheridan, in Republic.

HERITAGE.

My sweet, why do I love thee so?
Since of my being thou wast part?
For such mere way of nature, no,
But that so like to him thou art.

Thou hast his form, his brow, his hair;
Like his, the color of thine eyes,
And thy wee rosebud lips do bear
His charm of laughter, babywise.

I cannot think of him away,
Nor feel as one bereaved alone.
In thee he lives again each day,
And thus I have you both, my own.
—Lippincott's.

DAY ON A FARM.

I thought I'd try a farming role,
Forsake the city mob.
A farming life, afar from strife,
Was just the sort of job.

The farmer got me up at three
To help him with his rigs.
Ere break of day I'd been valet
To forty-seven pigs.

No milkmaids danced; no quartette sang,
The dullness to assuage;
Which robbed the farm of half the charm
It has upon the stage.

I acted farm hand all that day,
But when the sun went down
And skies grew drab I hailed a cab
And hustled back to town.
—Louisville Courier-Journal.

THE TWILIGHT WITCH.

The twilight witch, which comes with her stars,
And strews them through the blue;
Then breathes below the sunset bars
A breath of meadow rue;
She trails her veil across the skies
And mutters to the trees,
And in the wood, with firefly eyes,
She wakes the mysteries.
The twilight witch, with elf and fay,
Is coming down the slumber way.
Sleep, my dearie, sleep.

The twilight witch, with crescent moon,
Stoops on the wooden hill;
She answers to the owlet's tune,
And to the whippoorwill.
She leans above the reedy pool
And wakes the drowsy frog,
And with the toadstool, dim and cool,
Rims gray the old dead log.
The twilight witch comes stealing down
To take you off to slumber town.
Sleep, my dearie, sleep.

The twilight witch with windlike tread
Has entered in the room;
She steals around your trundle bed
And whispers in the gloom.
She says: "I brought my steed along,
My fairy steed of gleams,
To bear out, like a breath of song,
Into the land of dreams.
I am the witch who takes your hand
And leads you off to fairyland,
The far off land of sleep."
—Madison Cawein.

THE COWBOY'S PRAYER.

O, Lord, I've never lived where churches grow;
I love creation better as it stood
That day you finished it so long ago
And looked upon your work and called it good.
I know that others find you in the light
That's sifted down through tinted window panes,
And yet I seem to feel you near to-night
In this dim, quiet starlight on the plains.

I thank you, Lord, that I am placed so well,
That you have made my freedom so complete;
That I'm no slave of whistle, clock or bell,
Or weak-eyed prisoner of wall and street.
Just let me live my life as I've begun
And give me work that's open to the sky;
Make me a partner of the wind and sun
And I won't ask a life that's soft or high.

Let me be easy on the man that's down
And make me square and generous with all;
I'm careless sometimes, Lord, when I'm in town,
But never let them say I'm mean or small.
Make me as big and open as the plains,
As honest as the horse between my knees,
Clean as the wind that blows behind the rains,
Free as the hawk that circles down the breeze.

Forgive me, Lord, when sometimes I forget;
You understand the reasons that are hid,
You know about the things that gall and fret,
You know me better than my mother did.
Just keep an eye on all that's done and said,
Just right me sometimes when I turn aside,
And guide me on the long, dim trail ahead,
That stretches upward toward the Great Divide.
—Charles B. Clark, Jr., in the Portland Oregonian.

ANIMAL FUN.

A thick-fleeced lamb came trotting by;
"Pray, whither now, my lamb," quoth I,
"To have," said he, with ne'er a stop,
"My wool clipped off at the Ba-ba shop."
—Christian Endeavor World.

A little horse I chanced to see;
He borrowed some cough drops of me;
"It's nothing serious of course,"
He said—"I'm just a little hoarse."
—Chicago Inter-Ocean.

A kind-eyed cow came walking by;
"Pray, whither now, kind cow?" quoth I.
At which she tossed her noble head;
"I'm going dry, kind sir," she said.
—Post-Dispatch.

A CHRISTMAS CAROL.

There's a song in the air!
There's a star in the sky!
There's a Mother's deep prayer
And a Bay's low cry!
And the star rains its fire while the beautiful sing,
For the manger of Bethlehem cradles a King.

There's a tumult of joy
O'er the wonderful birth,
For the Virgin's sweet Boy
Is the Lord of the earth.
Ay! the star rains its fire and the beautiful sing,
For the manger of Bethlehem cradles a King.

In the light of that star
Lie the ages impearled;
And that song from afar
Has swept over the world.
Every heart is aflame and the beautiful sing
In the homes of the nations that Jesus is King.

We rejoice in the light,
And we echo the song
That comes down through the night
From the heavenly throng.
Ay! we shout to the lovely evangel they bring,
And we greet in his cradle our Savior and King.
—Josiah Gilbert Holland.

FAREWELL OF THE OLD YEAR.

When the moments of friendship are numbered,
How oft it appears
That the love which in laughter has slumbered
Awakes now in tears!

We are friends that have journeyed together,
Long time, you and I;
Through sunshine and stormiest weather,
But the Old Year must die.

And awhile in your hearts will awaken
A bitter regret;
And the paths that your feet have forsaken
You cannot forget.

Yet I pray you to mourn not my going,
Though we have been friends;
What am I but one billow whose flowing
Has touched shore and ends?

And the tale of my joy and my sorrow
Lives but as the trace
Of the waves, that the tides of the morrow
In turn shall efface.

Yet I leave you, as waves leave their treasures
Of coral and shell,
A gift, passing sorrows and pleasures,
Our friendship to tell.

I leave you the friendships, whose growing
Has been from my birth;
There is naught that the tide brings in flowing
Can equal their worth.

For as shells from the murmurs of ocean
Steal echoes that last,
So in friendship is stirred the emotion
Of years that are past.
—Francis W. Bourdillon.

PRINCESS TAMBON HER SISTER and BROTHER.

Three Indian Dolls For 30 Cents and One-year's Subscription to a Splendid Magazine.

INSTRUCTIVE AND AMUSING.

This is the Greatest Combination Ever Offered in the Form of a Subscription Premium.

These Dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—the PRINCESS TOMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. Directly one order is filled a dozen more follow. It is actually a startling success.

PRINCESS TAMBON.
Sixteen Inches High.

THE MAGAZINE.

The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated magazine of thirty-two pages, four columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid magazine.

HER BROTHER—KOSHPOP.
Six Inches High.

HER SISTER—PRINCESS YIMINY.
Six Inches High.

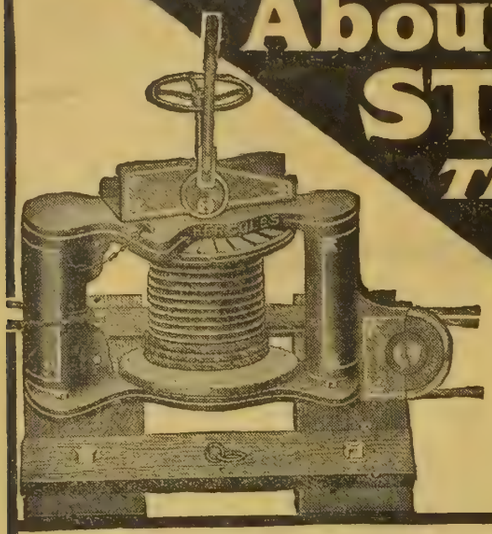
THE PROPOSITION.

Send us thirty (30) cents for one-year's subscription to the UNIVERSAL MAGAZINE and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed.

Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Read What These Farmers Say About The HERCULES STUMP PULLER

Then Write For My Grand Free Book About Pulling Out Stumps!



Pull Out the Stumps—and Raise Crops on Virgin Soil

Stump land robs you of *virgin soil*—the most fertile soil in the world. If you have 40 acres of stump land you're losing at least $750.00 in crops you *don't* get—and *half* the realty value of the land. You can raise a good 1500 bushels of corn on that 40 acres—you can raise a good 75 tons of hay—or 3,000 bushels of oats—or 1,000 bushels of wheat. What does it mean to *you* in dollars and cents? Doesn't it prove that

Loafer Land Doesn't Pay

Doesn't it prove that you need a Hercules Triple Power All Steel Stump Puller? I tell you friend, the sooner you get the stumps out of your field, the sooner you'll be making the *real big* farm profits. Get a Hercules. It pulls any stump in five minutes—pulls an acre of stumps a day. It can be used as a single, double or triple power machine. Its all steel construction gives it 400 per cent more strength than the next best puller and 60 per cent less weight. It is self anchored or stump anchored—built low to the ground—polished and turned to make the draft light—has *double* safety ratchets.

My New Offer Makes It Easy For You to Own a Hercules

Let me send you my fine free book and special price offer. I want you to read the facts and proof shown in my book. See the actual photographs and letters sent in by owners of the Hercules Stump Pullers. Read my thirty day trial offer—my three year guarantee against breakage from *any cause* and note the price I will make you.

Send Your Name In

Use the Rush Coupon or a postal. Send it in today. I honestly believe it is the best move you can make right now. Your copy of my catalog is ready—waiting for you to write. Do it now before you forget—or take down the name and address, and write at the first opportunity. Address me personally

B. A. FULLER, Pres.

Hercules Mfg Co.

840 22d Street

Centerville, Iowa

THESE MEN KNOW

J. W. Shealy, Ballentine, S. C., writes:
"I am only a small farmer, but I have succeeded in stumping the most of my land with the Hercules. Would not think of trading the cost of puller and expense of stumping land for the stumps as they were in the field before I used the Hercules."

Andrew Swanson, Houston, Minn., writes:
"We have been two of us and one horse working with the Hercules about 89 days and I am sure it is the best investment I ever made. I will always have a good word for the Hercules Company for honesty and a square deal."

C. W. Hadley, St. Clair, Mo., writes:
"We got the finest piece of corn in this country where there was nothing but trees and brush and stumps last year, but we cleared it out with a Hercules Machine and put it into corn."

Nicholas C. Fries, Nansville, N. Y., writes:
"I purchased a Hercules Steel Puller about May 1910. I have used it on my farm with much satisfaction and have cleared about 18 acres. I think I may say it will pull anything you hitch to. I pulled some stumps that were four feet across. I can sincerely recommend this puller."

A. R. Reitz, Shady Bend, Kansas, writes:
"We have surely pulled some tough stumps with the Double and Triple Power Hercules. We pulled some Green White Oak stumps 3½ inch base diamater, cut two years ago, and all spouted out—growing. It surely surprised me to pull these with the Triple Power, Genuine Steel Puller. Some of the stumps had roots 25 feet long."

August Hanke, Wathena, Kansas, writes:
"About one year ago, I purchased from your firm, one of your Hercules Triple Power, Genuine Steel Pullers. I have placed this machine to the most severe tests and have come to the conclusion that it will do even more than you claim. With my Hercules, at odd times when the work on my farm was slack, I have cleared 10 acres of heavy brush and timberland. The stumps on this tract of land was very thick, consisting of Oaks, Linn and Elm.

I cleared this land of stumps, brush, roots and all, which left the land in a splendid tillable condition. Last spring I planted this tract of land in corn, and it yielded 450 bushels of the finest corn that has ever been seen in these parts.

I am intending to clear 20 more acres this spring, the timber on this land is so dense that it is almost impossible to work in; however I shall overcome all difficulties encountered, as my Hercules only requires a cleared circle about 24 feet in diamater, in which to commence work. If you desire to use this letter in your advertising matter, it will be perfectly satisfactory to me."

J. K. Detwiler, Bristol, Ind., writes:
"I have a Hercules Triple Power, All-Steel Stump Puller, and it gives entire satisfaction. We cleared 24 acres. It takes out the roots and all. The machine is just as good as when we commenced. It is very simple and handy, and beats dynamite all to pieces for cheapness. To have cleared my land with dynamite would have cost me about $600, but instead of that we have simply used our spare time and the stumps are out, roots and all.

Our stumps are White Oak, large center, tap-rooted. We think sometimes they come from China. No trouble. Anyone can work my Hercules. I would advise every farmer that has land to clear to get the Hercules. This year we raised great big potatoes where the stumps were last year and the land was easily cultivated."

Geo. Hugle, Nehawka, Neb., writes:
"We have pulled the stumps off four acres of ground and they were awful thick. With three men we pulled at the rate of 200 stumps a day. We are now plowing for corn and there aren't any roots to bother us so we find the Hercules Stump Puller much cheaper, as well as safer than dynamite."
